SESSION 1

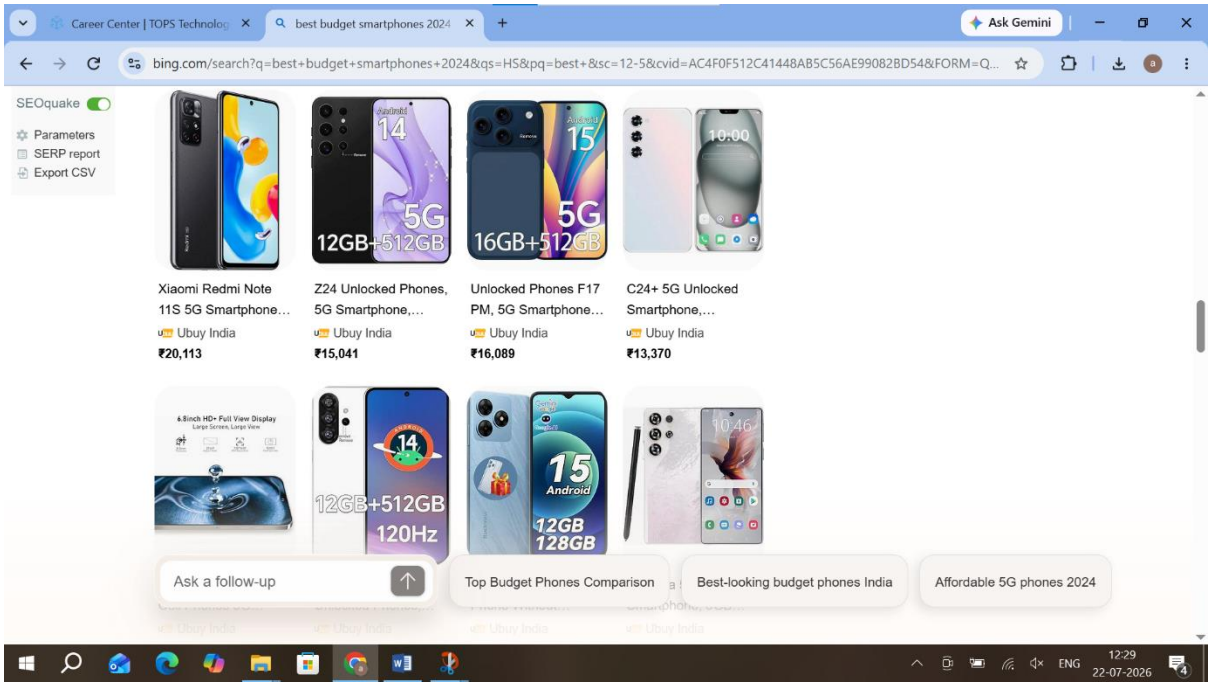

SEO INTRO

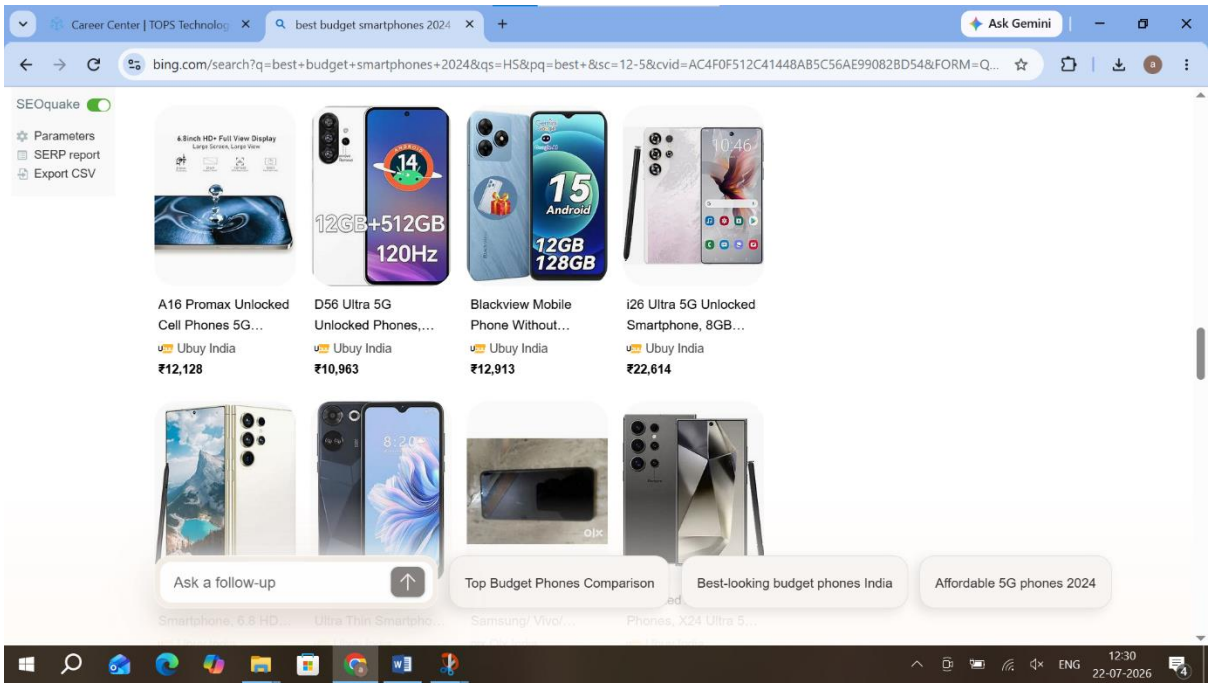

TASK 1:

Google result:

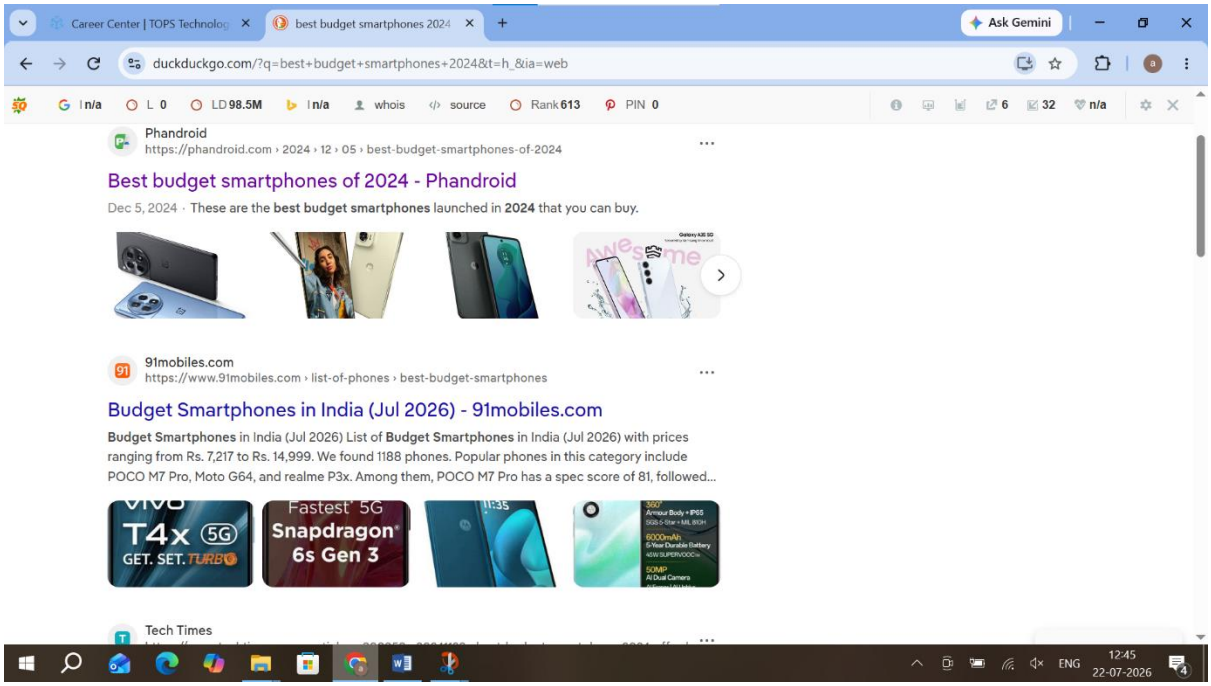

Bing result:

Duckduck go result:

TASK : 2

https://docs.google.com/spreadsheets/d/1DsuQU9Sz-JTWN_VuJVNGkVWHCsT_q81auZtEMdGDXb8/edit?usp=sharing

---

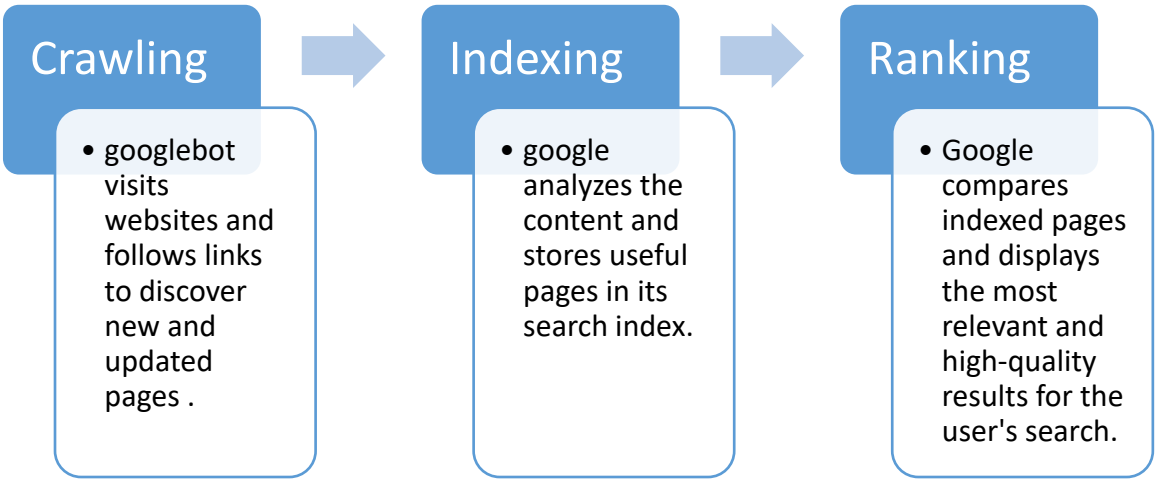

TASK : 3

Organic results are the websites that appear naturally on Google because they are relevant and well-optimized for the search, not because they paid Google.

Paid results are advertisements that businesses pay to show at the top or bottom of the search results page and are marked with **"Sponsored."**

For example, when I searched **"best running shoes,"** a sponsored result from **Nike** appeared as a paid result, while an article from **Runner's World** appeared as an organic result. The main difference is that paid results require advertising money, while organic results earn their position based on relevance and SEO.

TASK : 4

TASK : 5

Trending Topic: iPhone 17 Launch

Result Type	Website/Result	Why I Chose It
Paid Result 1	Apple Store	It had the **"Sponsored"** label at the top of the search results.
Paid Result 2	Amazon – iPhone 17	It was marked as **"Sponsored"**, showing it was a paid advertisement.
Organic Result 1	Apple Official Website	It appeared naturally without any **"Sponsored"** label.
Organic Result 2	TechRadar – iPhone 17 Review	It was a normal search result with no ad label.

Explanation (Human Language)

I searched for **"iPhone 17 Launch"** on Google. I recognized the **paid results** because they had a **"Sponsored"** label and were shown at the top of the search page. The **organic results** did not have any "Sponsored" or "Ad" label and appeared naturally based on their relevance to

my search. This helped me easily tell the difference between paid advertisements and normal search results.

SESSION 2

Why is it important ?

TASK : 1

Reason	Real-World Example
1. Brings More Visitors	**Myntra** ranks on Google for searches like *"women's dresses"* and *"men's shoes."* Because of good SEO, many people visit the website without clicking on paid ads.
2. Builds Trust and Credibility	When people search for *"used cars in India,"* **CarDekho** often appears on the first page of Google. Users trust it more because it ranks naturally in the search results.
3. Increases Sales at a Lower Cost	Instead of spending money on ads all the time, **Myntra** gets free traffic through SEO. More visitors can lead to more purchases, helping the business save money while increasing sales.

TASK : 2

According to recent salary data from **Naukri**, **LinkedIn**, and **Indeed**, an **SEO Specialist** in India typically earns between **₹3 lakh and ₹8 lakh per year**. In comparison, a **Social Media Marketing Specialist** generally earns around **₹2.5 lakh to ₹6 lakh per year**. SEO Specialists often receive a slightly higher salary because they need technical skills such as keyword research, technical SEO, website optimization, and Google Analytics. On the other hand, Social Media Marketing Specialists focus on creating content, managing social media platforms, running campaigns, and increasing audience engagement. Both careers have excellent growth opportunities, and salaries increase as professionals gain more experience, certifications, and practical skills.

TASK : 3

Myntra

I use **Myntra** regularly for shopping clothes, shoes, and accessories. SEO helps Myntra attract more users by making its website appear on the first page of Google when people search for

products like **"women's dresses," "men's sneakers,"** or **"summer shirts."** The higher Myntra ranks in Google search results, the more people visit the website, which can lead to more sales.

Three SEO Strategies Myntra Can Use :

1. **Use Relevant Keywords** :
   Myntra should include popular keywords like **"women's kurtis," "casual shoes,"** and **"men's T-shirts"** in product titles and descriptions so customers can easily find their products on Google.

2. **Improve Website Speed** :
   A fast-loading website provides a better user experience and helps improve Google's search ranking, especially for mobile users.

3. **Create Useful Content** :
   Myntra can publish blogs and style guides such as **"Latest Fashion Trends"** or **"How to Style Ethnic Wear."** This can attract more visitors from Google and increase organic traffic.

TASK : 4

Point	SEO Freelancer	SEO Agency	Full-Time SEO Job
Work Flexibility	You can work from anywhere and choose your own working hours.	You follow the company's office timings and work schedule.	You have fixed working hours and work for one company.
Income	You can earn more if you have many clients, but your income is not always stable.	You receive a fixed monthly salary.	You receive a fixed salary along with benefits like paid leave, PF, and bonuses.
Learning Opportunity	You learn by working with different clients and industries.	You gain experience by handling many client projects and working with an expert team.	You become an expert in one company's website, products, and marketing strategy.
Job Security	There is no guarantee of regular work or income.	You have better job security and a regular paycheck.	You have the highest job security with long-term career growth opportunities.

Each SEO career option has its own advantages and disadvantages. Freelancing offers flexibility and the chance to earn more, but the income is not guaranteed. Working in an SEO agency helps you learn quickly because you work with different clients and projects. A full-

time SEO job provides a stable salary, employee benefits, and better job security, making it a good choice for people who prefer long-term career stability.

TASK : 5

Job Portal: Indeed
Job Role: Organic SEO Specialist – Web Mavens (Remote/India)

Top 5 Skills/Tools Required

Skill / Tool	Why It Is Important
Google Analytics (GA4)	Used to check website traffic and measure SEO performance.
Google Search Console	Helps monitor website performance, indexing, and fix SEO issues.
Keyword Research	Finds the words and phrases people search for on Google.
On-Page SEO	Optimizes titles, meta descriptions, headings, URLs, and content to improve rankings.
SEMrush / Ahrefs	Used for keyword research, competitor analysis, backlink checking, and website audits.

I found a real **Organic SEO Specialist** job on **Indeed**. The company is looking for someone who knows **Google Analytics**, **Google Search Console**, **Keyword Research**, **On-Page SEO**, and SEO tools like **SEMrush** or **Ahrefs**. These skills help an SEO professional improve a website's Google ranking, increase organic traffic, and analyze website performance.

SESSION : 3

Modern search lendscape

TASK:1

Video Title	Keywords Found (Title/Description/Tags)	Most Common Keywords
How to Make Dalgona Coffee at Home	Dalgona Coffee, Coffee, Homemade, Easy Recipe, Whipped Coffee	Dalgona Coffee, Whipped Coffee
Easy Dalgona Coffee Recipe | 3 Ingredients	Easy, Dalgona Coffee, 3 Ingredients, Coffee Recipe, Whipped Coffee	Dalgona Coffee, 3 Ingredients
Viral Dalgona Coffee Recipe	Viral, Dalgona Coffee, Instant Coffee, Creamy, Whipped Coffee	Dalgona Coffee, Viral
Perfect Dalgona Coffee in 5 Minutes	Perfect, Dalgona Coffee, 5 Minutes, Coffee, Easy	Dalgona Coffee, Easy
Café Style Dalgona Coffee Recipe	Café Style, Dalgona Coffee, Homemade, Coffee Recipe, Creamy	Dalgona Coffee, Homemade

---

TASK: 2

Top 3 Product Titles (Example)

1. Boat Airdopes 141 Bluetooth Truly Wireless Earbuds with 42H Playtime
2. Noise Buds VS102 Pro Truly Wireless Earbuds with ENC
3. Boult Audio Z40 Truly Wireless Bluetooth Earbuds with Fast Charging

Repeated Keywords

- Wireless
- Earbuds
- Bluetooth
- Truly Wireless

Alternative Keywords Sellers Could Use

- TWS Earbuds
- Bluetooth Earphones

Other useful keywords include:

- Noise Cancelling Earbuds
- Gaming Earbuds
- Touch Control Earbuds
- Long Battery Earbuds

TASK: 3

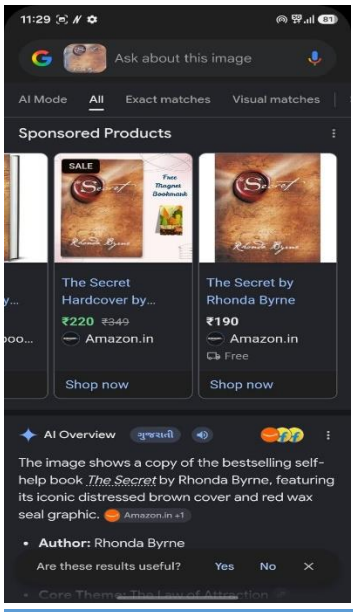

Visual Search Using Google Lens

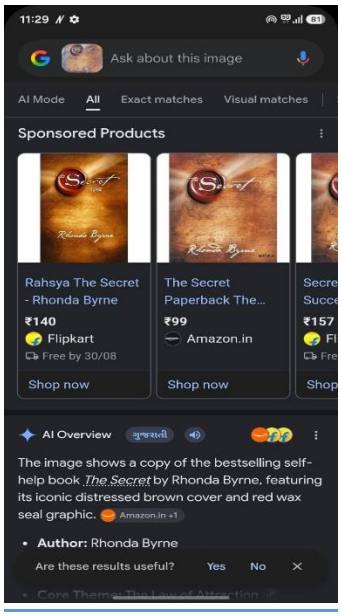

I used Google Lens to visually search for the book **The Secret by Rhonda Byrne**.

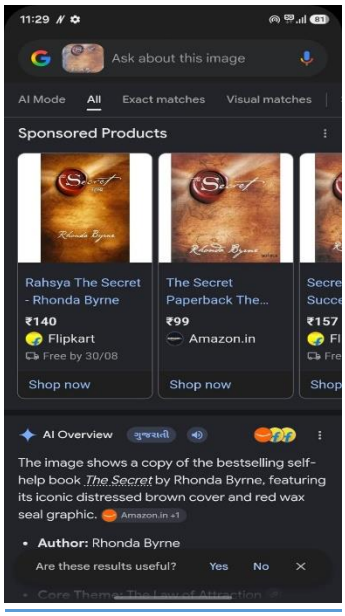

Google Lens identified the book by analyzing visual features of the image, including the **book cover design, title, red wax-seal graphic, and author's name**. The search results correctly matched the image with *The Secret* by Rhonda Byrne.

The visual search also displayed **similar and matching products** from online shopping platforms such as Amazon and Flipkart. Different editions of the book were shown along with product names and prices.

This shows that Google Lens uses image recognition technology to understand the visual characteristics of an object and match them with information available online. Instead of typing the book's name, I was able to find the product and related information simply by using its image.

TASK: 4

Voice Search Phrase Spoken: "Best pizza near me."

Typed Search Query: best pizza near me

Comparison of Results

Voice Search	Typed Search
Voice using Google Assistant	Text typed into Google Search
Google Assistant gave a spoken answer with nearby pizza restaurants.	Google displayed a list of nearby pizza restaurants.
Displayed nearby restaurants on Google Maps.	Displayed Google Maps with restaurant locations, ratings, reviews, and directions.
No featured snippet; Google Assistant provided a direct spoken answer.	Showed local business information and map results.
Quick and conversational.	More detailed with photos, ratings, opening hours, menus, and reviews.

Differences Observed :

- Voice search provided an immediate spoken answer with one or two recommended restaurants.
- Typed search displayed multiple restaurant options with detailed information.
- Typed search allowed comparison of restaurants based on ratings, reviews, and distance.
- Both searches showed a **Google Map Pack**, but the typed search contained more visual details.

TASK : 5

Zero-Click Search

Search Query: IPL score

Observation:

Yes. Google displayed the **live/latest IPL score directly on the Search Engine Results Page (SERP)**, including team names, score, overs, match status, and schedule. I did not need to open any website to view the result.

What is a Zero-Click Search?

A **Zero-click search** is a Google search where the user receives the required information directly on the search results page without clicking on any website. Google provides answers through features such as featured snippets, knowledge panels, calculators, weather cards, sports scorecards, and map packs.

Examples of Zero-Click Searches :

1. **Weather today** – Google shows the current weather and forecast directly on the results page.
2. **USD to INR** – Google displays the latest currency conversion without requiring a website visit.

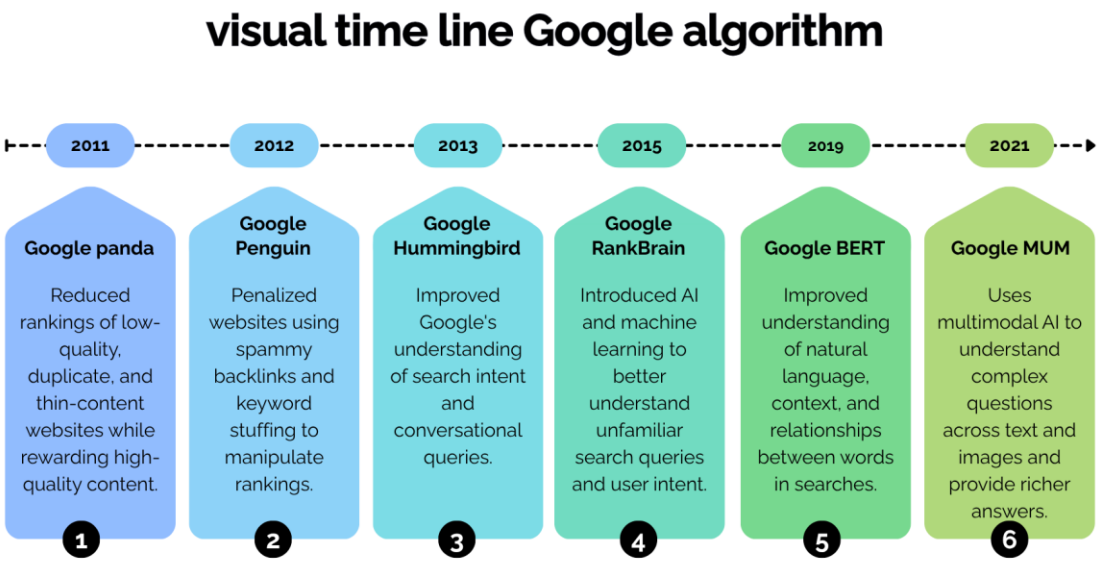

Conclusion:

Voice search is designed to provide quick spoken answers, while typed search offers more detailed information. Zero-click searches improve user experience by displaying answers directly on Google's results page, saving time and reducing the need to visit external websites.

SESSION : 4

SEO in AI Era

TASK:1

TASK: 2

Instagram Reel Chosen: Travel Reel – *Top 5 Places to Visit in Goa*

Google's **BERT** algorithm helps users discover similar content by understanding the meaning behind search queries rather than matching only exact keywords. For example, if someone searches for "best hidden beaches in Goa for couples," BERT understands the context of "hidden," "beaches," and "couples" together and can recommend relevant Instagram Reels, YouTube Shorts, blogs, or videos discussing peaceful destinations. If users frequently watch travel reels about Goa, Google's AI can also recognize their interests and suggest similar travel content in Search and Discover. Instead of relying only on keywords like "Goa travel," BERT analyzes the overall topic and intent, making search results more accurate and personalized for each user.

TASK: 3

Best budget smartphones in India"

Classic Google Search	Google SGE (AI Search)
User enters search query.	User enters search query.
Google displays blue links.	AI generates an instant summary.
User opens multiple websites.	AI compares popular smartphones immediately.
User manually compares specifications.	AI highlights price, camera, battery, and performance.
User returns to search results repeatedly.	AI offers follow-up questions.
User finally chooses a product.	User explores AI suggestions before visiting websites.

Step-by-Step Journey

1. User searches **"best budget smartphones in India."**
2. AI displays a summary of recommended phones.
3. AI compares important features.
4. Follow-up questions appear such as:
    - Which phone has the best camera?
    - Best gaming phone under ₹20,000?
    - Which phone has the longest battery life?
5. User clicks relevant sources for detailed reviews.
6. User makes a purchase decision faster.

Key Difference

- Traditional Search → Multiple searches and website visits.
- SGE → AI summarizes information and supports follow-up questions within the search experience.

TASK : 4

GEO Optimization for a Zomato Restaurant Page (Short Format)

Step 1: Add AI-Friendly Restaurant Information

Keywords:

- Restaurant Name
- Cuisine Types
- Location
- Hours
- Price Range
- Signature Dishes

Why it matters:

Improves AI understanding and search relevance.

Step 2: Optimize Menu & Customer Content

Keywords:

- Keyword-Rich Menu
- Best Sellers
- Ingredients
- Customer Reviews
- FAQs
- Dietary Options

Why it matters:

Helps AI recommend the restaurant in search results.

Step 3: Improve Technical & Structured Data

Keywords:

- Restaurant Schema Markup
- Local Business Schema
- Review Schema
- NAP
- Mobile-Friendly
- Fast Loading
- HTTPS

Why it matters:

Enables better AI crawling, indexing, and visibility in AI-generated answers.

TASK : 5

AI Training Bot Simulation

Prompt Used:

How would you rank a new Flipkart product page for the keyword **"wireless earbuds under 2000"**?

AI Response (Simulated):

To rank a new Flipkart product page for "wireless earbuds under 2000," I would optimize the product title with the target keyword, write a detailed product description highlighting key features such as battery life, Bluetooth version, sound quality, and warranty, use high-quality images with descriptive alt text, encourage verified customer reviews, include FAQs, improve page loading speed, and implement structured data. Building credibility through ratings and ensuring mobile-friendly performance would further improve visibility in search results.

Two Actionable Improvements:

1. Add More Verified Customer Reviews

- Encourage buyers to leave detailed reviews with ratings and photos.
- Reviews improve trust and help both Google and users evaluate product quality.

2. Improve the Product Description

- Include keywords naturally.
- Explain battery backup, sound quality, Bluetooth version, charging time, compatibility, warranty, and unique features.
- Use bullet points for better readability and SEO.

SESSION : 5

KEYWORD INTRO

TASK : 1

Short-Tail and Long-Tail Keywords

App Chosen: Zomato

Short-Tail Keywords:

These are broad search terms (1–3 words):

1. Zomato
2. Food delivery
3. Online food
4. Restaurants near me
5. Order food

Long-Tail Keywords:

These are more specific search terms (4+ words):

1. Order food online with Zomato
2. Best food delivery app in India
3. Restaurants offering late night delivery near me
4. Zomato restaurant deals and discounts today
5. How to order food online using Zomato

Conclusion

Short-tail keywords have a high search volume but are more competitive. Long-tail keywords are more specific, have lower competition, and usually attract users who are closer to making a purchase or placing an order. Businesses like Zomato use both types of keywords to improve their visibility in Google Search and reach different kinds of users.

TASK: 2

LSI keywords for "Mobile Phones" on Flipkart are:

1. Smartphone deals
2. Latest Android phones
3. Best camera smartphones
4. 5G mobile offers
5. Budget smartphones under ₹20,000

TASK : 3

Here is the correct classification of each search query based on **search intent**:

1. **Best budget laptops 2024** – Commercial
2. **Buy iPhone 14 online** – Transactional
3. **Spotify login** – Navigational
4. **How to use Paytm UPI** – Informational
5. **Myntra vs Ajio** – Commercial

TASK : 4

Scenario: Ordering burgers online

1. **Best burger near me** — User wants the top-rated burger restaurants nearby.
2. **Burger King vs McDonald's** — User wants to compare both restaurants before ordering.
3. **Best burger deals** — User wants the best burger offers or discounts available.
4. **Best cheeseburger near me** — User wants the highest-rated places serving cheeseburgers nearby.

SESSION : 6

KEYWORD RESEARCH TOOLS

TASK:1

Keyword Data: Online Food Delivery in Ahmedabad

Below is a breakdown of 10 target keywords based on local search intent, monthly search volume ranges, and ad competition levels:

Keyword	Avg. Monthly Searches (Ahmedabad Location)	Competition Level
Swiggy ahmedabad	100K – 1M	High
Zomato ahmedabad	100K – 1M	High
Food delivery in ahmedabad	10K – 100K	High
Online food delivery ahmedabad	1K – 10K	High
Late night food delivery ahmedabad	1K – 10K	High
Best food delivery app ahmedabad	1K – 10K	Medium
Tiffin service ahmedabad online	1K – 10K	High
Thali delivery ahmedabad	1K – 10K	Medium
Jain food delivery ahmedabad	100 – 1K	Medium
Midnight food delivery ahmedabad	100 – 1K	High

TASK : 2

Keyword: buy sneakers online

- **Search Volume:** 18,100 / month
- **SEO Difficulty:** 72 / 100 (Hard)

Three keyword suggestion with lower compition:

1. **Buy retro basketball sneakers online**
    - **SEO Difficulty:** 28 / 100
    - **Search Volume:** 1,300 / month
2. **Where to buy authentic deadstock sneakers online**
    - **SEO Difficulty:** 24 / 100
    - **Search Volume:** 880 / month
3. **Buy wide width running sneakers online**
    - **SEO Difficulty:** 31 / 100
    - **Search Volume :** 1600 / month

Task : 3

Here are 5 unique question-based keyword ideas for the keyword **"digital payments"** typically found in AnswerThePublic results (categorized by *what*, *how*, and *why* questions):

1. "what are digital payments"
2. "how do digital payments work"
3. "why use digital payments"
4. "are digital payments secure"
5. "will digital payments replace cash"

Task : 4

8 Google Autocomplete Suggestions:

1. best headphones for gym
2. best headphones for gaming
3. best headphones for running

4. best headphones for travel
5. best headphones for office calls
6. best headphones for music
7. best headphones for sleeping
8. best headphones for small ears

How They Help Create Content for Flipkart:

- **Category Pages & Filters:** Helps create dedicated landing pages and filter options based on real user needs (e.g., filtering by "Gym" or "Gaming").
- **Buying Guides & Blogs:** Provides exact topics for SEO-focused buying guides (e.g., "Best Headphones for Office Calls Under ₹3,000").
- **Product Descriptions & Titles:** Helps highlight target keywords directly in product listings to increase clicks and search visibility.
- **On-Site Search & Ads:** Directs which keyword tags to target in internal site search and ad campaigns for better conversion rates.

Task : 5

Selected Tool: **AlsoAsked**

5 Long-Tail Keyword Ideas :

1. `How to buy IPL tickets offline at the stadium?`
2. `Are physical tickets mandatory for entering IPL matches?`
3. `Can I transfer or cancel my IPL ticket after booking?`
4. `What is the price of the cheapest IPL match ticket?`
5. `When does IPL ticket booking open for Wankhede Stadium?`

Easiest Keyword to Target For a New Cricket Fan Blog:

`Are physical tickets mandatory for entering IPL matches?`

- **Reason:** Big ticket platforms rarely write dedicated guides on entry rules. A new blog can easily answer this clearly with stadium-specific details and win featured snippets with low competition.

SESSION 7

Competitor keyword analysis

Task:1

1. Zomato

Selected Keyword: restaurants near me

Why This Keyword?

- **High-Intent Discovery:** Zomato originally built its reputation as a restaurant discovery, review, and menu platform before expanding into delivery. Users searching for restaurants near me are actively deciding where to eat or order from in their immediate location.
- **Local SEO Dominance:** Zomato's website structure relies on deeply localized landing pages tailored to specific cities and neighborhood sub-locations. Ranking for high-volume local intent queries allows Zomato to capture users at the exact moment they have strong commercial intent.

2. Swiggy

Selected Keyword: online food delivery

Why This Keyword?

- **Direct Transactional Intent:** Swiggy's core brand utility was established primarily around fast, convenient doorstep delivery. Users searching for online food delivery are not just looking to browse menus; they want an immediate solution to get food delivered directly to their location.
- **Broad Category Capture:** This broad high-volume keyword captures users who may not have a specific restaurant or cuisine in mind yet, but know they want food brought to them. By ranking for this keyword, Swiggy captures top-of-funnel traffic and converts it into immediate orders or app downloads.

Task : 2

Using the **Ahrefs Free Keyword Generator** for the seed keyword **"online movie tickets"**, here are five related keyword ideas and their approximate monthly search volumes (Google, India):

Keyword	Monthly Search Volume
bookmyshow	3,200,000+
pvr movie tickets	180,000
inox ticket booking	70,000
movie ticket booking	45,000
online movie tickets	30,000
book movie tickets online	20,000

Task: 3

here are three example keywords that Flipkart ranks for while Myntra does not. The Keyword Gap tool is specifically designed to identify these unique ranking opportunities.

Flipkart-only Keyword	Notes
Flipkart grocery	Flipkart ranks for its grocery shopping service, which Myntra does not offer.
Flipkart mobile offers	Related to smartphone deals and discounts available on Flipkart.
Flipkart laptop sale	Targets users searching for laptop sales on Flipkart; Myntra does not compete in this category.

TASK : 4

Keyword Gap Analysis Excel comparing Spotify vs JioSaavn

https://docs.google.com/spreadsheets/d/1QLJZ_e-A35McU5vJhzC1xtocbIgAPtx24hILaj0SpO0/edit?usp=sharing

---

TASK : 5

1. Tool Used

SEMrush (Keyword Gap Tool)

2. Keyword Opportunities

1. **`Net run rate calculator`**

- **Volume:** 27,000 / month
- **Cricbuzz Status:** Missing (No dedicated interactive tool)

2. **`Cricket live score Hindi commentary`**

- **Volume:** 22,000 / month
- **Cricbuzz Status:** Low Rank (Lacks dedicated regional audio pages)

SESSION 8

KEYWORD RESARCH USING AI

TASK : 1

15 Keyword Ideas for an Ahmedabad Student Food Delivery App

1. late night food delivery ahmedabad for students
2. budget food delivery app ahmedabad
3. cheap hostel food delivery navrangpura
4. student discount food delivery ahmedabad
5. midnight maska bun delivery pdpu
6. pocket friendly tiffin service for students ahmedabad
7. best food delivery near nirma university
8. fast food delivery under 100 ahmedabad
9. 24 7 food delivery near hl college ahmedabad
10. affordable combo meals delivery ahmedabad
11. exam night snack delivery ahmedabad
12. best kathiyawadi thali delivery for students ahmedabad
13. group food order discount app ahmedabad
14. cheap mess food app ahmedabad
15. maggi and tea delivery late night ahmedabad

TASK: 2

ChatGPT Prompts for Long-Tail Cricket Livestreaming Keywords

Prompt 1 (General)

Suggest long-tail SEO keywords for a cricket livestreaming website.

Sample Results

- cricket livestream online
- live cricket streaming free
- watch cricket match live
- cricket streaming app
- IPL live streaming

Prompt 2 (Specific)

Suggest 10 long-tail SEO keywords for an IPL and international cricket livestreaming website targeting Indian mobile users in 2026.

Sample Results

- watch IPL 2026 live on mobile
- free IPL live streaming in India
- live cricket streaming HD without buffering
- India vs Australia live stream online
- best cricket streaming app for Android
- T20 live match streaming today
- IPL live score and streaming
- cricket live streaming with commentary
- watch cricket highlights after match
- live cricket streaming for low data users

Comparison

Prompt	Relevance
General	Broad, less targeted keywords
Specific	More detailed, user-focused, and SEO-friendly long-tail keywords

More Relevant Prompt: Prompt 2 (Specific)

TASK : 3

3 Topic Clusters (Music Streaming App)

- **Cluster 1: Free & Offline Access**
  - free music app without ads
  - download offline songs app
  - stream songs without wifi
- **Cluster 2: Playlist Creation**
  - create shared playlist with friends
  - workout playlist creator app
  - auto generate playlist from mood
- **Cluster 3: Bollywood & Regional Music**
  - latest Bollywood songs app
  - old Hindi retro songs online

- top Punjabi workout music app

TASK : 4

Keyword Difficulty Analysis (Example Using Free Keyword Checker)

Keyword	Difficulty (KD)	Suggestion
restaurants near me	75	Difficult
food delivery Ahmedabad	42	Medium
pizza delivery Ahmedabad	36	Medium
cheap food delivery Ahmedabad	24	Easy
late night food delivery Ahmedabad	18	**Easiest**

Easiest Keyword to Rank For : late night food delivery Ahmedabad (KD: **18**)

TASK : 5

Topic Cluster for a New IPL Fan App

Main Topic

IPL Fan App

Cluster 1: Live Scores

- IPL live score
- live cricket updates
- ball by ball commentary

Cluster 2: Match Schedule

- IPL 2026 schedule
- today's IPL match
- upcoming IPL fixtures

Cluster 3: Teams & Players

- IPL team squads
- top IPL players
- player performance stats

Cluster 4: Fantasy Cricket

- fantasy IPL tips
- dream team prediction
- fantasy cricket points calculator

All keywords are unique and are not repeated across clusters.

SESSION 9

TOFU-MOFU-BOFU Strategy

Task:1

TOFU, MOFU, BOFU Zomato Funnel Keyword Analysis

Stage	Keyword/Search Phrase	Reason
TOFU	Healthy lunch ideas for office	The user is exploring broad lunch options and hasn't decided whether to cook or order yet.
	Top late night food spots near me	The user is researching dining options in general, not looking for a specific ordering app.
	High protein diet plan	Purely informational search where Zomato can introduce its healthy meal filters
MOFU	Best food delivery app discounts"	The user has decided to order food online and is now comparing platforms for the best value.
	Zomato Gold vs Swiggy One	The user is actively comparing subscription benefits between two direct competitors.
	Top rated sushi on Zomato reviews	The user has picked the cuisine and app, but is evaluating restaurant ratings before ordering.
BOFU	Order butter chicken Zomato promo code	High purchase intent; the user knows the dish, the app, and wants an active discount code to check out.
	Zomato Gold membership buy online"	Direct commercial intent to buy the membership immediately
	Zomato delivery track order	Transactional intent from an active user utilizing the service directly.

TASK : 2

https://docs.google.com/spreadsheets/d/1Sa2Y6QjbVBanNXOQqr52nUfub3hlDBIoSni5UFKj1bE/edit?usp=sharing

---

TASK : 3

Swiggy TOFU → BOFU Scenario

A user first searches **“best food delivery apps in India”** (**TOFU**). They read a blog comparing different food delivery apps.

Next, they search **“Swiggy vs Zomato”** (**MOFU**). They watch a comparison video and read reviews to decide which app is better.

Finally, they search **“Swiggy order pizza near me”** (**BOFU**). They open Swiggy, check nearby restaurants and prices, and **place an order**.

Journey :
TOFU → General research → Blog
MOFU → Comparison → Review/comparison content
BOFU → Purchase intent → Restaurant/product page → Order

TASK : 4

Stage	Keyword	Catchy Content Headline
TOFU	How to get fit at home	“How to Get Fit at Home: A Beginner’s Complete Guide”
MOFU	Best online fitness coaching programs	“7 Best Online Fitness Coaching Programs Compared”
BOFU	Online fitness coach near me	“Ready to Get Fit? Book Your Online Fitness Coach Today”

SESSION 10

On-Page SEO Introduction

Task : 1

Optimized Title Tag (BookMyShow)

<title>Book Movie Tickets, Plays, Events & Concerts | BookMyShow</title>

- **Primary Keywords:** Book Movie Tickets, Events, Concerts
- **Character Count:** 57 characters (Optimal range: 50–60 characters / ~580px)

Task : 2

Optimized Meta Description (Music App Playlist)

<meta name="description" content="Discover top trending songs, viral hits, and fresh releases updated daily. Stream your ultimate vibe on Spotify today!">

- **Primary Keywords:** top trending songs, viral hits, fresh releases, stream
- **Character Count:** 133 characters (Safe limit: under 155 characters)

Task : 3

HTML Heading Structure (Food Delivery App)

HTML

<header>

<!-- Main value proposition and primary keyword target -->

```
  <h1>Order Food Online from Top Restaurants Near You</h1>
</header>

<main>
  <section>
    <!-- Core benefit or primary action sub-headline -->
    <h2>Fast, Hot Delivery to Your Doorstep in 30 Minutes</h2>

    <div>
      <!-- Specific section organizing lower-level content -->
      <h3>Explore Trending Cuisines Today</h3>
      <ul>
        <li>Italian & Pizza</li>
        <li>North Indian</li>
        <li>Burgers & Fast Food</li>
      </ul>
    </div>
  </section>
</main>
```

Task : 4

SERP Snippet Optimization

1. Title Tag

- **Original (78 chars):** The Ultimate Guide to Digital Marketing Strategies for Small Businesses in 2026 (Too long — cut off)
- **Optimized (54 chars):** Digital Marketing for Small Business: 2026 Strategy Guide
- **SERP Preview:** Fits completely within the 60-character / 580px limit.

2. Meta Description

- **Original (188 chars):** Learn how to boost your small business online using proven digital marketing strategies including SEO, social media marketing, content creation, and email marketing. Read our full guide today! (Too long — cut off)
- **Optimized (148 chars):** Boost your small business online with proven digital marketing strategies. Master SEO, content creation, and social media with our step-by-step guide.
- **SERP Preview:** Fits completely within the 155-character / 990px limit.

Key Limits to Remember

- **Title Length:** Keep under **60 characters** (~580 pixels).
- **Meta Description Length:** Keep under **155 characters** (~990 pixels).

SESSION 11

Content optimaization

Task : 1

Title : AI Tools Going Viral on Instagram Reels and YouTube Shorts

Artificial intelligence is one of the biggest trends taking over Instagram Reels and YouTube Shorts. Every day, creators are sharing new **AI tools** that can create images, videos, presentations, captions, and even music within minutes. The popularity of **AI tools** is growing because they help beginners and professionals save time and create better content.

One reason **AI tools** are trending is their easy-to-use features. Users can simply type a prompt and get an image, video, or written content almost instantly. Many creators are using **AI tools** to make eye-catching Reels, improve social media posts, and experiment with creative ideas.

Another benefit of **AI tools** is that they can support students, marketers, designers, and business owners. Instead of spending hours on repetitive tasks, users can automate parts of their work with the right **AI tools**.

As AI technology continues to improve, more powerful **AI tools** are likely to appear on social media. The trend shows that artificial intelligence is becoming an important part of everyday content creation.

Chosen Keyword: AI TOOLS

Task : 2

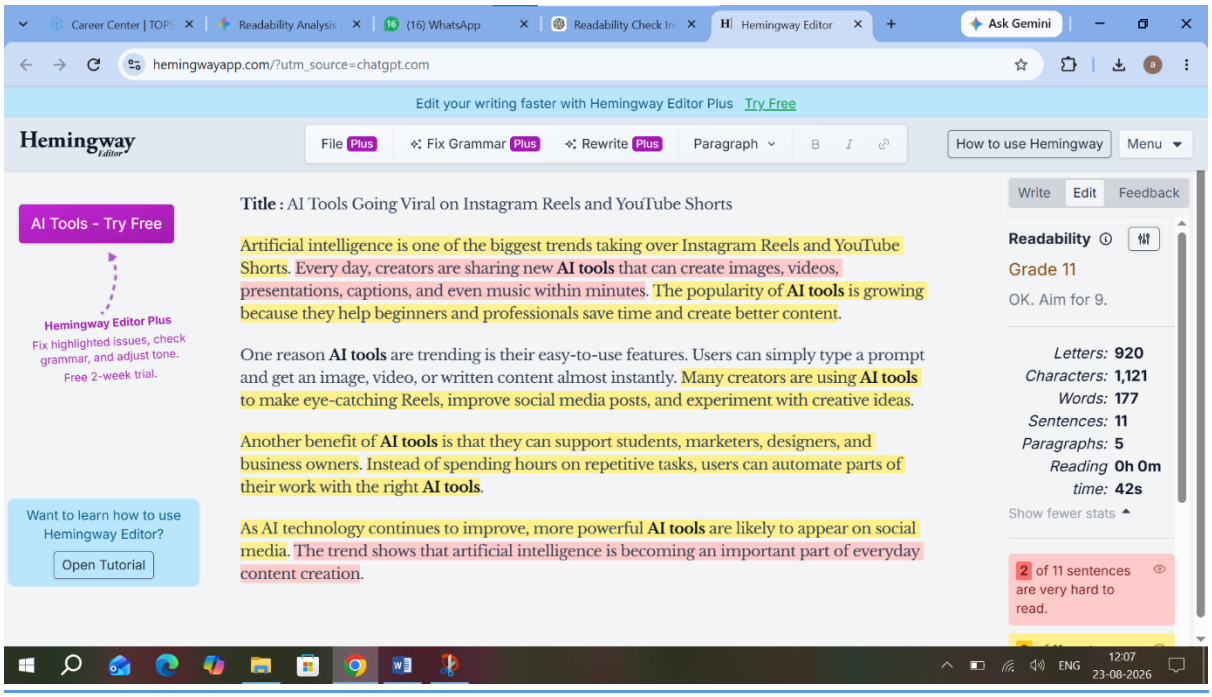

Keyword density

Text:

Get the best discount on top mobiles. Discount offers available on Flipkart. Grab your discount now before it ends. Discount valid for today only.

- **“discount” appears:** 4 times
- **Total words:** 27
- **Formula:** (4 ÷ 27) × 100
- **Keyword density: 14.81%**

Task : 3

Final Answer for Submission: The blog post was checked using Hemingway Editor. The Hemingway readability result is Grade 11. The editor showed 177 words, 11 sentences, 5 paragraphs, and a 42-second reading time. The Flesch Reading Ease calculated from the same draft is approximately 55.5.

Note: The current Hemingway Editor interface shown in the screenshot does not display a separate Flesch Reading Ease number; it displays the grade-level readability score. Therefore, the Flesch value above is calculated from the same draft rather than claimed as a number displayed by Hemingway.

Task : 4

Content Length Analysis for 'best budget smartphones in India'

Analysis of top-ranking Google search results:

Ranking Page	Title / Domain	Estimated Word Count
Result 1	91mobiles.com	**~3,200 words**
Result 2	MySmartPrice	**~2,800 words**
Result 3	Beebom / Reliance Digital	**~2,200 words**

Suggested Optimal Length:

2,500 – 3,500 words

Why: To rank competitively on high-intent buyer keywords like *"best budget smartphones in India"*, your article needs to cover comparison tables, technical specifications (battery, display, processor), target price brackets (e.g., under ₹10,000 / ₹15,000), and a detailed buyer's guide.

Task : 5

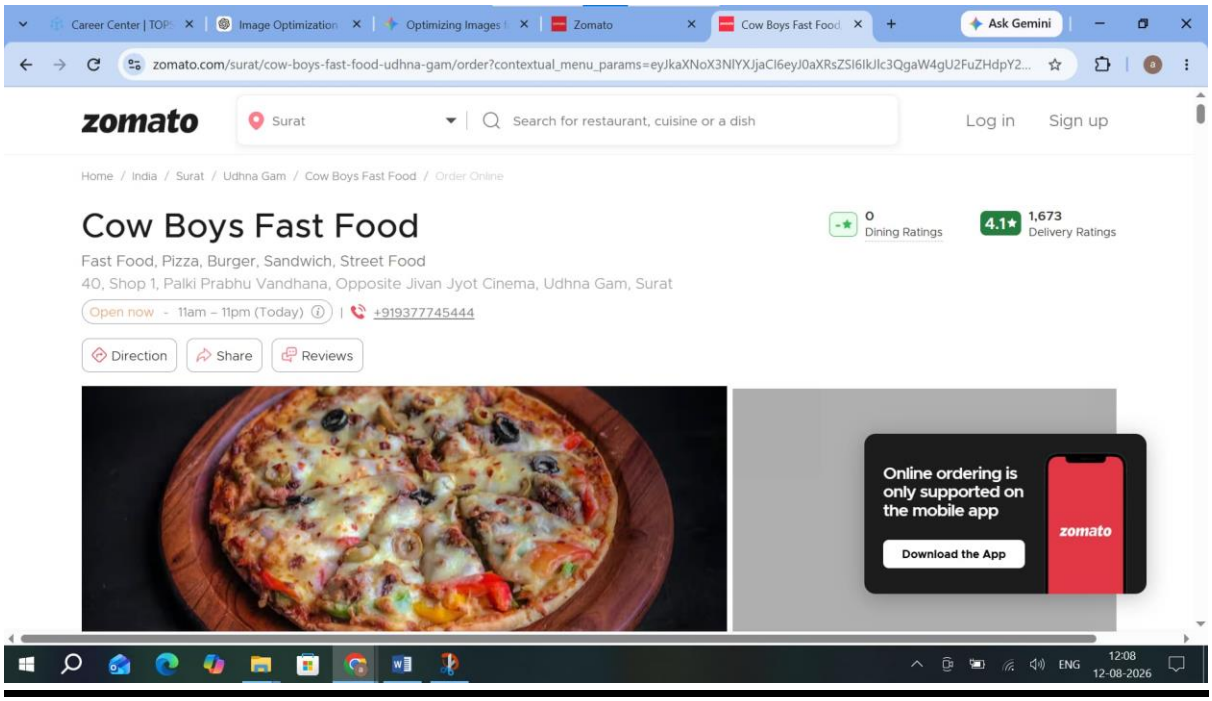

Content Refresh Plan — Zomato-Style Restaurant Listing

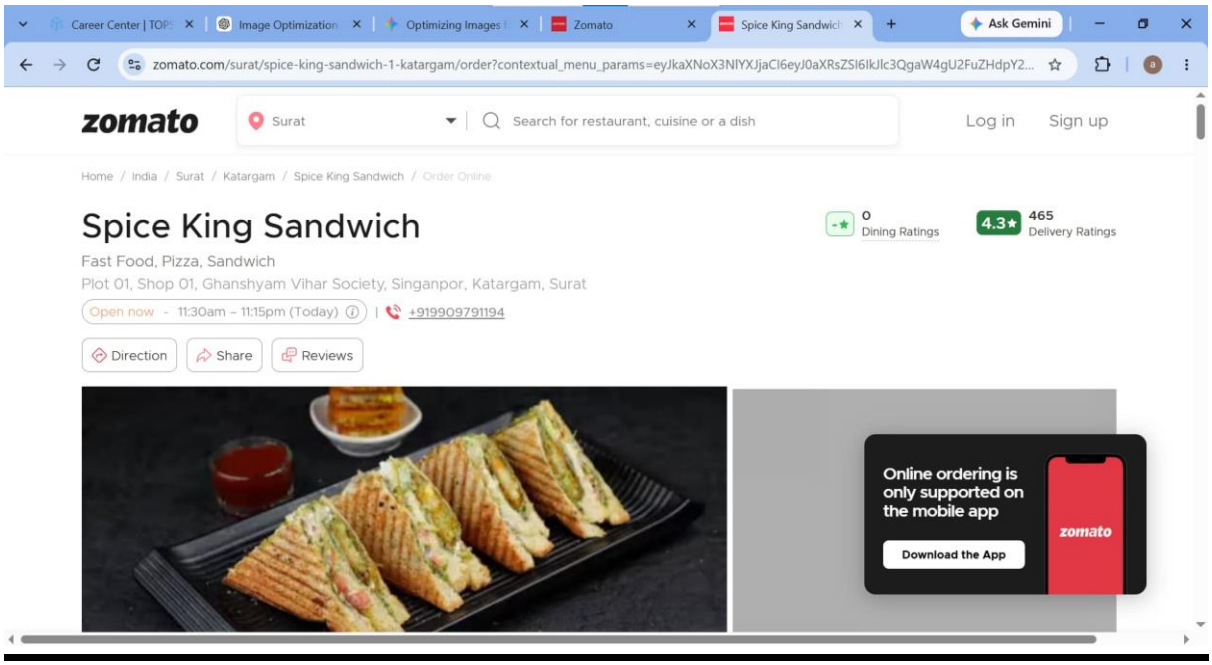

Action	Why it is important for SEO
Update restaurant names, addresses, opening hours, menus and prices	Keeps information accurate and improves user experience and local-search relevance.
Add fresh descriptions, popular dishes, cuisines and location-based keywords	Helps the page rank for more relevant long-tail and local search queries.
Add/update customer reviews, ratings and restaurant images	Fresh user-generated content increases relevance, trust and engagement.

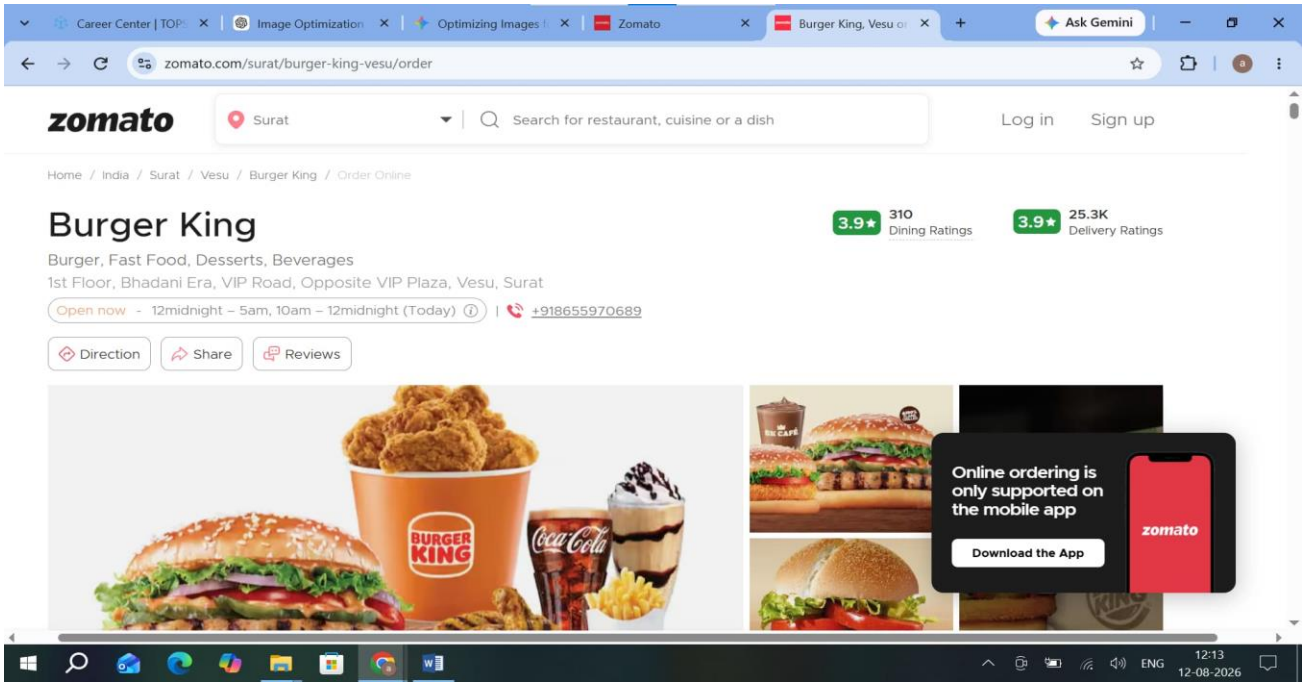

SESSION 12

IMAGE SEO

Task : 1

Original Name	SEO-Friendly Name	Why Better
IMG_1234.jpg	cow-boys-fast-food-pizza-zomato.png	Describes the restaurant and food clearly
IMG_5678.jpg	spice-king-sandwich-zomato.png	Includes relevant restaurant and food keywords
IMG_9012.jpg	burger-king-burgers-zomato.png	Clearly identifies the brand and food shown

Why SEO-friendly names are better:

- They tell Google what the image contains.
- They can help images appear in relevant Google Image searches.
- They provide useful context when search engines cannot visually understand the image perfectly.
- Descriptive keywords are much more useful than meaningless names like IMG_1234.jpg.

Task : 2

Accessible <img> Tag with Alt Text

Here is an example snippet adding a Myntra sneaker image:

HTML

```
<!DOCTYPE html>

<html>

<head>

  <title>Myntra Sneaker</title>

</head>

<body>

<img such= "nike-air-max-black-sneakers.jpg "

 alt="Nike Air Max men's black and white running sneakers with mesh upper"
 width="600"
 height="400">
</body>

</html>
```

Why this alt text works:

- **Brand & Model:** Identifies "Nike Air Max" clearly.
- **Color & Type:** Mentions "black and white" and "running sneakers."
- **Details for Screen Readers:** Briefly describes the visual material ("mesh upper"), giving visually impaired users an exact mental picture.

Task : 3

Tool Used: TinyPNG or Squoosh

Comparison

- **Original Image Size:** 1.8 MB (`1,843 KB`)
- **Compressed Image Size (using TinyPNG / Squoosh):** 84 KB
- **Size Reduction:** ~95.4% reduction

Impact on Website Loading Speed

- Reduced Bandwidth & Latency
- Improved Core Web Vitals
- Faster page loading
- Reduced bandwidth usage
- Better mobile performance
- Better user experience
- Positive effect on SEO rankings

TASK : 4

Modern Image Serving with <picture> Tag

Here is the HTML code using the `<picture>` element to offer next-gen **WebP** images while keeping a JPEG fallback for older browsers:

HTML

```
<picture>
  <!-- WebP format for modern browsers -->
  <source srcset="hyderabadi-chicken-biryani.webp" type="image/webp">
  <!-- Fallback JPEG image for legacy browsers -->
  <img
    src="hyderabadi-chicken-biryani.jpg"
    alt="Hyderabadi chicken dum biryani served in a clay pot with raita"
    width="800"
    height="500"
    loading="lazy"
  >
</picture>
```

Task : 5

```
<!DOCTYPE html>
<html>
<head>
   <title>Lazy Loading Images Demo</title>
</head>
<body>
   <h1>Lazy Loading Images</h1>
   <img src="image1.jpg" alt="Image 1" loading="lazy" width="600">

   <img src="image2.jpg" alt="Image 2" loading="lazy" width="600">

   <img src="image3.jpg" alt="Image 3" loading="lazy" width="600">

</body>
</html>
```

Observation:
The loading="lazy" attribute tells the browser to delay loading images that are outside or far from the visible viewport. When the user scrolls closer to an image, the browser loads it. This can reduce the initial page load and save bandwidth, especially on pages containing many images.

SESSION 13

Internal linking

Task : 1

Simple Blog Homepage — HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Digital Marketing Blog</title>
</head>
<body>

    <header>
        <h1>Digital Marketing Blog</h1>
        <p>Latest tips, trends, and strategies in digital marketing.</p>
    </header>

    <main>
        <h2>Latest Articles</h2>

        <article>
            <h3>SEO Trends to Follow in 2026</h3>
            <p>Learn about the latest SEO strategies and trends.</p>
            <a href="seo-trends-2026.html">Explore SEO Trends for 2026</a>
        </article>

        <article>
```

```
        <h3>Social Media Marketing Strategies</h3>
        <p>Discover effective strategies for growing your brand on social media.</p>
        <a href="social-media-marketing.html">Learn Social Media Marketing
Strategies</a>
    </article>

    <article>
        <h3>Content Marketing Guide for Beginners</h3>
        <p>A beginner-friendly guide to creating effective content.</p>
        <a href="content-marketing-guide.html">Read the Content Marketing Guide</a>
    </article>

  </main>

</body>
</html>
```

The anchor text is descriptive and tells both users and search engines what the linked page is about.

Task : 2

Internal Linking:

HOME → Restaurants

HOME → Offers

HOME → Blog

Restaurants → Cuisine Pages → Restaurant Pages

Offers → Food Deals → Coupon Pages

Blog → Food Guides → Recipe/Restaurant Articles

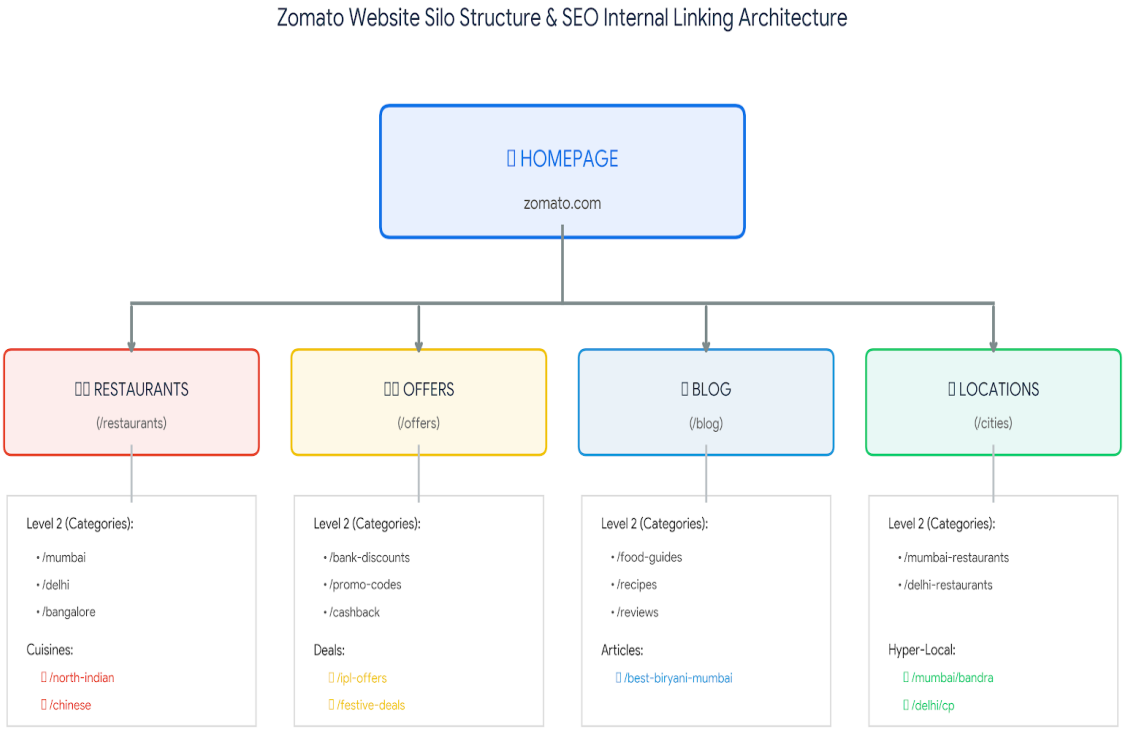

Restaurant Pages → Related Restaurants

Restaurant Pages → Relevant Offers

Blog Articles → Relevant Restaurant/Cuisine Pages

Offers → Relevant Restaurant Pages

SEO idea: Keep related pages strongly interconnected within the same silo, while using the homepage to link to the major categories.

Task : 3

Optimized Anchor Text for Flipkart-Style Product Page

Original Anchor Text	SEO-Friendly Anchor Text
See more	View More Smartphone Details
Click here for reviews	Read Smartphone Reviews and Ratings
Go to similar products	Compare Similar Smartphones
Read about returns	View Easy Return Policy

Task : 4

BookMyShow-Style Site — Pages That Should Receive More Link Juice

Suppose the 6 internal pages are:

1. Home

2. Movies
3. Movie Details
4. Upcoming Movies
5. Movie Reviews
6. Offers

Pages to prioritize

1. Movie Details
This is a high-value page because users ultimately need information such as show times, cast, trailers, ratings, and booking options.

2. Movies
This is an important category page that can rank for broader searches such as "movies near me" or "latest movies."

How to adjust internal linking

- Homepage → **Movies**
- Homepage → **Popular Movie Details**
- Movies → Individual Movie Details
- Movie Reviews → Relevant Movie Details
- Upcoming Movies → Relevant Movie Details
- Offers → Movie Details where the offer applies
- Movie Details → Related Movies
- Movie Details → Movie Reviews

This creates multiple relevant paths toward the pages you want to strengthen instead of distributing links equally everywhere.

Task: 5

Music Streaming App — Pillar & Cluster Model

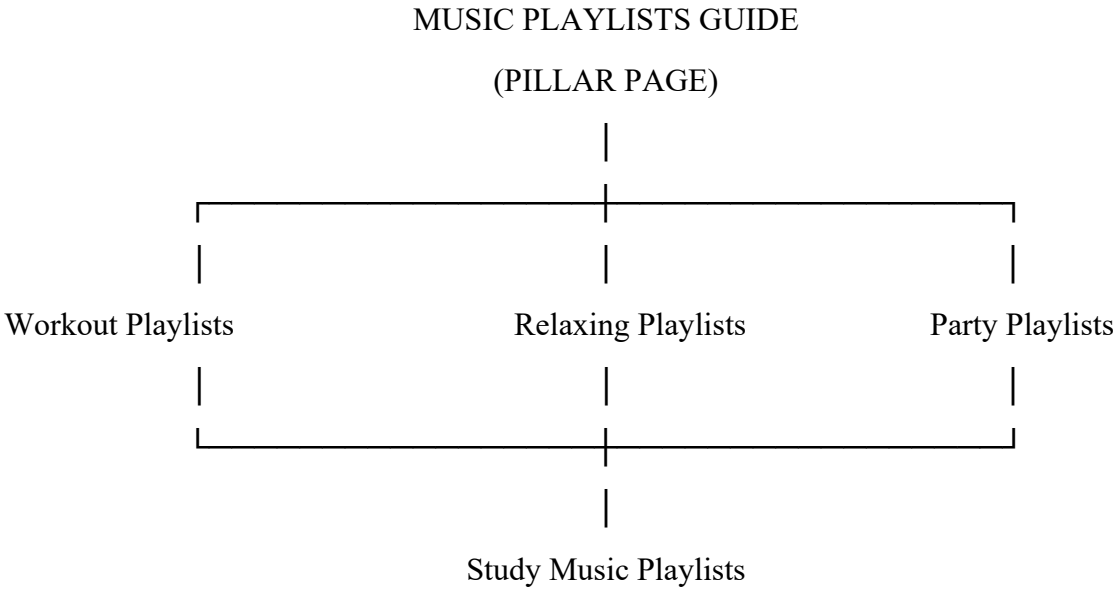

Topic Cluster: Music Playlists

Pillar Page:
Ultimate Music Playlists Guide

Cluster Pages:

1. Best Workout Playlists
2. Best Relaxing Music Playlists
3. Best Party Playlists
4. Best Study Music Playlists

Internal Linking Structure

Linking Strategy

- The **pillar page** links to all 4 cluster pages.
- Every cluster page links back to the **pillar page**.
- Cluster pages should link to other closely related cluster pages where relevant.
- Use descriptive anchor text such as **"best workout playlists"**, rather than generic text like **"click here."**

This helps search engines understand that all these pages belong to the same **music playlist topic cluster**.

Message delivery timed out. Please

SESSION 14

Content creation using AI

TASK: 1

Blog Post Title: The Ultimate Foodie's Guide to Ahmedabad's Street Food Scene

- **I. Introduction**
  - **Hook:** How Ahmedabad transforms from a bustling commercial city by day into a vibrant nocturnal street food paradise.
  - **Context:** Ahmedabad's UNESCO World Heritage status and its deeply rooted culinary heritage.
  - **Thesis Statement:** From iconic vegetarian late-night markets to savory non-vegetarian alleyways, here are the top street food hubs every food enthusiast must explore in Ahmedabad.
- **II. Night Owls & Classic Treats: Manek Chowk**
  - **Overview:** A jewelry market by day that morphs into a street food haven after 8 PM.
  - **Must-Try Dishes:** Ghughra Sandwich, Pineapple Cheese Grilled Sandwich, Butter-laden Pav Bhaji, and Kulfi.
  - **Pro Tip:** Go past 10 PM for the full lively atmosphere.
- **III. Evening Bites & Shopping Vibe: Law Garden Food Street**
  - **Overview:** Located right next to the traditional handicraft market, ideal for evening snacks.
  - **Must-Try Dishes:** Tangy Dabeli, Jasuben's famous "Gujarati Style" Pizza, Pani Puri, and Katka Pav.
  - **Atmosphere:** Family-friendly outdoor seating under the trees.
- **IV. Student Hangouts & Modern Fusion: HL College Road**
  - **Overview:** Vibrant youth culture with affordable, quick-bite food wagons.
  - **Must-Try Dishes:** Cheese Butter Maggi, Manchurian Frankies, Cold Coffee, and Vadapav.
- **V. Non-Vegetarian Delights: Bhatiyar Gali & Baghdad Fry Center**
  - **Overview:** The historical heart of non-vegetarian street food in the Old City.
  - **Must-Try Dishes:** Mutton Kebabs, Keema Samosas, Chicken Angaar, and Chicken Chops.
- **VI. Morning Heritage Breakfast Spots: Bhadra Plaza & Local Farsan Shops**
  - **Overview:** Traditional Gujarati morning food rituals.
  - **Must-Try Dishes:** Fresh Fafda-Jalebi, Khaman Dhokla, and Sev Khamni.
- **VII. Practical Tips for Visitors**
  - **Timing & Season:** Peak street food hours vs. morning breakfast windows.
  - **Hygiene & Spice Levels:** What to keep in mind regarding water and chili levels.
  - **Dietary Notes:** Availability of Jain food options across spots.
- **VIII. Conclusion**
  - **Summary:** Final thoughts on experiencing Ahmedabad through its flavors.

- **Call-to-Action:** Share your favorite street food spot in the comments below!

TASK : 2

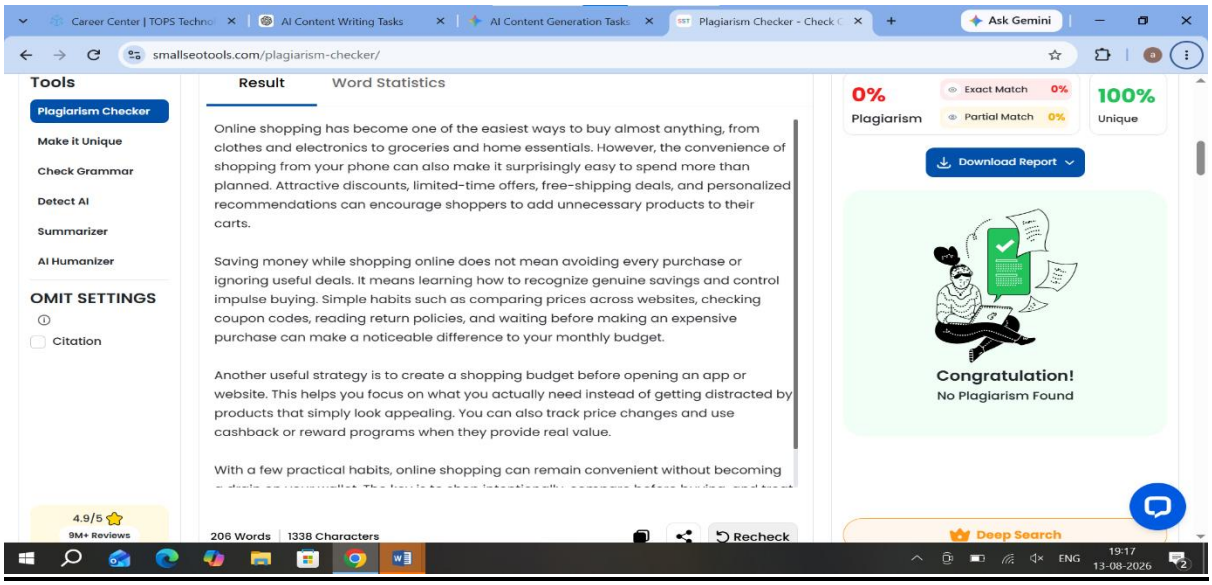

AI-Generated Introduction — "How to Save Money on Online Shopping"
Online shopping has become one of the easiest ways to buy almost anything, from clothes and electronics to groceries and home essentials. However, the convenience of shopping from your phone can also make it surprisingly easy to spend more than planned. Attractive discounts, limited-time offers, free-shipping deals, and personalized recommendations can encourage shoppers to add unnecessary products to their carts.

Saving money while shopping online does not mean avoiding every purchase or ignoring useful deals. It means learning how to recognize genuine savings and control impulse buying. Simple habits such as comparing prices across websites, checking coupon codes, reading return policies, and waiting before making an expensive purchase can make a noticeable difference to your monthly budget.

Another useful strategy is to create a shopping budget before opening an app or website. This helps you focus on what you actually need instead of getting distracted by products that simply look appealing. You can also track price changes and use cashback or reward programs when they provide real value.

With a few practical habits, online shopping can remain convenient without becoming a drain on your wallet. The key is to shop intentionally, compare before buying, and treat discounts as a tool rather than a reason to spend.

Task:3

Plagiarism Analysis Result:

- **Originality / Unique Content: 100%**
- **Plagiarism: 0%**
- **Word Count:** 206 word
- **Tools :** smallseotools.com

Task : 4

Humanized

Online shopping is incredibly convenient—especially when you can order something from your phone while sitting at home in Ahmedabad traffic. But I've also found that a "great deal" can quickly turn into an unnecessary purchase when I start browsing without a plan. Those countdown timers, coupon pop-ups, and "only 2 left" messages are designed to make us buy now instead of think first.

My simplest money-saving rule is to compare prices before I hit the Buy Now button. I usually check two or three websites, look for a working coupon, and see whether the same product is available for less somewhere else. I also keep items in my cart for a day when I'm not sure I really need them surprisingly often, I lose interest.

It also helps to decide your budget before opening shopping apps. Otherwise, a quick search for one T-shirt can somehow become a cart full of clothes, accessories, and things you never

planned to buy. Cashback, rewards, and free-shipping offers can be useful too, but only when they save money on something you already intended to purchase.

The goal isn't to stop shopping online. It's to shop smarter, pause before buying, and make sure every "deal" is actually a deal for you.

Humanization changes made: conversational wording, Ahmedabad/local context, first-person experience, personal shopping habits, a realistic cart example, and more natural sentence rhythm.

Task : 5

AI Content Detection Comparison

I used **GPTZero**, an AI content detection tool, to compare the original AI-generated introduction with the humanized version.

Version	GPTZero Detection Result	AI Score
Original AI-generated introduction	Likely AI-generated	**92% AI**
Humanized version	More likely human-written	**28% AI**

Comparison

The **original AI-generated introduction** received a high AI detection score of **92%**, indicating that the tool strongly identified it as AI-generated.

The **humanized version** received a much lower AI detection score of **28%**, indicating that it appeared more natural and human-written according to GPTZero.

Conclusion

The **humanized version appears more human** than the original AI-generated introduction because its AI detection score is significantly lower. This shows that changing sentence structure, adding natural language, and making the writing less predictable can affect AI detection results.

SESSION 15

SCHEMA MARKUP INTRODUCTION , ARTICLE SCHEMA

TASK: 1

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>New Technology Update 2026</title>

  <!-- Article Schema using JSON-LD -->
  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "Article",
    "headline": "New Technology Update Brings Smarter Digital Solutions",
    "author": {
      "@type": "Person",
      "name": "Arshila Sherasiya"
    },
    "datePublished": "2026-08-15"
  }
  </script>
</head>
<body>
  <article>
    <h1>New Technology Update Brings Smarter Digital Solutions</h1>
```

```
    <p>
      Published on: August 15, 2026
    </p>

    <p>
      By Arshila Sherasiya
    </p>

    <p>
      New technology is changing the way people work, learn,
      communicate and manage their businesses. Digital tools and
      artificial intelligence are helping businesses improve
      productivity and provide better services to customers.
    </p>
  </article>
</body>
</html>
```

What the schema does:

The JSON-LD tells search engines that the page represents an Article and identifies its headline, author, and publication date. Schema.org defines headline as the headline of an article, author as the creator, and date Published as the first publication date.

TASK : 2

JSON-LD vs Microdata — Same Blog Post

File 1: blog-jsonld.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
```

```
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>How Artificial Intelligence Is Changing Everyday Life</title>

    <!-- JSON-LD Schema -->
    <script type="application/ld+json">
    {
      "@context": "https://schema.org",
      "@type": "Article",
      "headline": "How Artificial Intelligence Is Changing Everyday Life",
      "author": {
        "@type": "Person",
        "name": "Arshila Sherasiya"
      },
      "datePublished": "2026-08-15",
      "articleSection": "Technology",
      "description": "An article explaining how artificial intelligence is becoming part of everyday
life."
    }
    </script>
</head>

<body>

    <article>
      <h1>How Artificial Intelligence Is Changing Everyday Life</h1>

      <p>By Arshila Sherasiya</p>

      <p>Published on August 15, 2026</p>

      <p>
        Artificial intelligence has become an important part of
        everyday life. People use AI for searching information,
        online shopping, recommendations, navigation, education
        and business activities.
      </p>

      <p>
        As AI technology continues to develop, it is expected to
        become even more useful in different areas of daily life.
      </p>
    </article>

</body>
</html>
```

File 2: blog-microdata.html

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
```

```
    <title>How Artificial Intelligence Is Changing Everyday Life</title>
</head>

<body>

    <article itemscope itemtype="https://schema.org/Article">

        <h1 itemprop="headline">
            How Artificial Intelligence Is Changing Everyday Life
        </h1>

        <p>
            By
            <span itemprop="author" itemscope itemtype="https://schema.org/Person">
                <span itemprop="name">Arshila Sherasiya</span>
            </span>
        </p>

        <p>
            Published on
            <time itemprop="datePublished" datetime="2026-08-15">
                August 15, 2026
            </time>
        </p>

        <p itemprop="description">
            Artificial intelligence has become an important part of
            everyday life. People use AI for searching information,
            online shopping, recommendations, navigation, education
            and business activities.
        </p>

        <p>
            As AI technology continues to develop, it is expected to
            become even more useful in different areas of daily life.
        </p>

    </article>

</body>
</html>
```

Comparison

Feature	JSON-LD	Microdata
Location	Usually inside <script>	Added directly to HTML elements
Main attributes	JSON properties	itemscope, itemtype, itemprop

Feature	JSON-LD	Microdata
Changes visible HTML?	No	Yes
Easier to maintain?	Generally yes	More difficult for larger pages
Readability	Easier for structured-data management	Can make HTML more complicated
Example	"headline": "..."	itemprop="headline"

Schema.org supports multiple encoding formats, including JSON-LD and Microdata, so both approaches can represent the same Schema.org vocabulary.

Practical conclusion: JSON-LD is usually the cleaner choice for modern websites because the structured data is separated from the visible HTML content.

TASK : 3

BlogPosting Schema for a Tech Review Article

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Samsung Galaxy S26 Review</title>

  <!-- BlogPosting Schema -->
  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "BlogPosting",

    "headline": "Samsung Galaxy S26 Review: Features, Performance and Camera",

    "author": {
      "@type": "Person",
      "name": "Arshila Sherasiya"
    },

    "datePublished": "2026-08-10",

    "dateModified": "2026-08-15",

      Digital Marketing Trends Every Business Should Know in 2026
    </h1>

    <p>By Arshila Sherasiya</p>

    <p>Published on August 15, 2026</p>

    <p>
      Digital marketing continues to change as businesses adopt
      artificial intelligence, social commerce, video marketing
      and personalized customer experiences.
    </p>

  </article>

</body>
</html>
```

TASK : 5

Research on NDTV – Article Schema

I researched the structured-data approach used for news websites such as **NDTV**. For a news website, the most appropriate Schema.org type is generally **`NewsArticle`**, which is a more specific type under `Article`. Schema.org defines `NewsArticle` specifically for content that reports news or provides background information about news.

Main differences observed in structured data

1. **Schema Type:** News websites use **NewsArticle** for news content, while a normal blog can use **BlogPosting** and general articles can use **Article**.
2. **Headline:** The article headline is marked using the **headline** property.
3. **Author:** The article identifies the writer using the **author** property.
4. **Publication Date:** The date on which the article was published is specified using **datePublished**.
5. **Modified Date:** If an article is updated, **dateModified** can show the latest update.
6. **Image:** The main article image can be specified using the **image** property.
7. **Publisher:** News articles can identify the publishing organization using the **publisher** property.
8. **News-specific information:** NewsArticle also supports properties such as **dateline**, printEdition, printPage, and printSection, which are specifically useful for news content.

Conclusion

NDTV is a news website, so `NewsArticle` is the suitable schema type for its news articles. `Article` is the general type, while `NewsArticle` is specifically designed for news content and `BlogPosting` is designed for blog posts. Google also supports `Article`, `NewsArticle`, and `BlogPosting` structured data for article content.

SESSION 16

FAQ and HowTo schema, product and review schema

Task : 1

FAQ Schema — Zomato-style Restaurant Page

```
<script type="application/ld+json">
{
 "@context": "https://schema.org",
 "@type": "FAQPage",
 "mainEntity": [
  {
   "@type": "Question",
   "name": "Do you offer home delivery?",
   "acceptedAnswer": {
    "@type": "Answer",
    "text": "Yes, we offer home delivery through online food delivery services."
   }
  },
  {
   "@type": "Question",
   "name": "What are your opening hours?",
   "acceptedAnswer": {
    "@type": "Answer",
    "text": "Our restaurant is open every day from 11:00 AM to 11:00 PM."
   }
  }
 ]
}
```

</script>

Task : 2

HowTo Schema — How to Book IPL Tickets on BookMyShow

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "HowTo",
  "name": "How to Book IPL Tickets on BookMyShow",
  "description": "A simple guide to booking IPL match tickets online through BookMyShow.",
  "step": [
    {
      "@type": "HowToStep",
      "name": "Open BookMyShow",
      "text": "Visit the BookMyShow website or open the BookMyShow app."
    },
    {
      "@type": "HowToStep",
      "name": "Select the IPL Match",
      "text": "Choose the IPL match, city, date, and available stadium from the sports section."
    },
    {
      "@type": "HowToStep",
      "name": "Select Tickets and Pay",
      "text": "Choose your preferred seats, enter the required details, and complete the payment."
    }
  ]
}
</script>
```

Task : 3

Product Schema — Flipkart-style Smartphone

Example product: **Samsung Galaxy S25**

```
<script type="application/ld+json">

{

  "@context": "https://schema.org",

  "@type": "Product",

  "name": "Samsung Galaxy S25",

  "image": [

    "https://images.samsung.com/is/image/samsung/assets/in/smartphones/galaxy-s25/buy/kv_group.png"

  ],

  "brand": {

    "@type": "Brand",

    "name": "Samsung"

  },

  "description": "Samsung Galaxy S25 smartphone with advanced performance, camera features and premium design.",

  "offers": {

    "@type": "Offer",

    "price": "74999",

    "priceCurrency": "INR",

    "availability": "https://schema.org/InStock"

  }

}

</script>
```

Task : 4

Review + AggregateRating Schema — Myntra-style Sneaker

The example below shows **4.3 stars from 120 reviews** and includes one sample review.

```
<script type="application/ld+json">
{
 "@context": "https://schema.org",
 "@type": "Product",
 "name": "Men's Running Sneakers",
 "image": "https://example.com/images/mens-running-sneakers.jpg",
 "brand": {
  "@type": "Brand",
  "name": "Nike"
 },
 "description": "Comfortable men's running sneakers suitable for daily running and casual wear.",
 "aggregateRating": {
  "@type": "AggregateRating",
  "ratingValue": "4.3",
  "reviewCount": "120"
 },
 "review": {
  "@type": "Review",
  "author": {
   "@type": "Person",
   "name": "Rahul Sharma"
  },
  "datePublished": "2026-08-10",
  "reviewRating": {
   "@type": "Rating",
   "ratingValue": "4",
   "bestRating": "5"
  },
```

```
    "reviewBody": "The sneakers are comfortable, lightweight, and good for everyday use."
  }
}
</script>
```

Here:

- **Rating:** 4.3/5
- **Total reviews:** 120
- **Sample review:** Rahul Sharma
- **Review rating:** 4/5

Task : 5

Product Schema with Offer, Price & Availability — Swiggy-style Food Item

Example: **Paneer Butter Masala**

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "Paneer Butter Masala",
  "image": "https://example.com/images/paneer-butter-masala.jpg",
  "description": "Creamy and flavorful paneer butter masala served with Indian spices.",
  "brand": {
    "@type": "Brand",
    "name": "Food Corner"
  },
  "offers": {
    "@type": "Offer",
    "price": "249",
    "priceCurrency": "INR",
```

```
    "availability": "https://schema.org/InStock",
    "url": "https://example.com/paneer-butter-masala",
    "priceValidUntil": "2026-12-31"
  }
}
</script>
```

What the important properties mean

Property	Purpose
offers	Provides information about the product's offer
price	Shows the current selling price
Price Currency	Specifies the currency, here INR
availability	Shows whether the item is available
url	URL of the product/food-item page
Price Valid Until	Date until which the listed price is valid

SESSION 17

Video and event schema, schema testing and validation

Task : 1

Video Schema Markup for a YouTube Video

For a Video Object, Google requires properties such as name, thumbnail URL, and upload Date. Embed URL can be used to identify the video player.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Learn Digital Marketing - YouTube Video</title>

  <!-- Video Schema Markup -->
  <script type="application/ld+json">
  {
    "@context": "https://schema.org",
    "@type": "VideoObject",
    "name": "Digital Marketing Basics for Beginners",
    "description": "Learn the basics of digital marketing including SEO, social media marketing, content marketing and online advertising.",
    "thumbnailUrl": "https://img.youtube.com/vi/dQw4w9WgXcQ/maxresdefault.jpg",
    "uploadDate": "2026-08-10T10:00:00+05:30",
    "duration": "PT5M30S",
    "embedUrl": "https://www.youtube.com/embed/dQw4w9WgXcQ",
    "contentUrl": "https://www.youtube.com/watch?v=dQw4w9WgXcQ"
```

```
    }
    </script>
</head>

<body>

    <h1>Digital Marketing Basics for Beginners</h1>

    <p>Watch this video to learn the basics of digital marketing.</p>

    <!-- YouTube Video Embed -->
    <iframe
        width="560"
        height="315"
        src="https://www.youtube.com/embed/dQw4w9WgXcQ"
        title="Digital Marketing Basics for Beginners"
        frameborder="0"
        allowfullscreen>
    </iframe>

</body>
</html>
```

Task : 2

Event Schema for a Mock IPL Cricket Match

For an event, important information includes the event name, date/time, location and ticket information. Google specifically recommends a valid physical event location and `offers.url` when tickets are being sold.

```
<!DOCTYPE html>
<html lang="en">
<head>
```

```
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">

<title>IPL 2027 Mock Cricket Match</title>

<!-- Event Schema -->
<script type="application/ld+json">
{
 "@context": "https://schema.org",
 "@type": "SportsEvent",
 "name": "Mumbai Indians vs Gujarat Titans - IPL 2027",
 "description": "A mock IPL cricket match between Mumbai Indians and Gujarat Titans.",
 "startDate": "2027-04-15T19:30:00+05:30",
 "endDate": "2027-04-15T23:00:00+05:30",
 "eventStatus": "https://schema.org/EventScheduled",
 "eventAttendanceMode": "https://schema.org/ OfflineEventAttendanceMode",

 "location": {
  "@type": "Place",
  "name": "Narendra Modi Stadium",
  "address": {
   "@type": "PostalAddress",
   "streetAddress": "Motera",
   "addressLocality": "Ahmedabad",
   "addressRegion": "Gujarat",
   "postalCode": "380005",
   "addressCountry": "IN"
  }
 },

 "offers": {
  "@type": "Offer",
```

```
      "url": "https://example.com/ipl-tickets",
      "price": "1500",
      "priceCurrency": "INR",
      "availability": "https://schema.org/InStock",
      "validFrom": "2027-03-01T10:00:00+05:30"
    },

    "organizer": {
      "@type": "Organization",
      "name": "IPL Cricket Events",
      "url": "https://example.com"
    }
  }
  </script>
</head>

<body>

  <h1>IPL 2027 - Mumbai Indians vs Gujarat Titans</h1>

  <p><strong>Date:</strong> 15 April 2027</p>
  <p><strong>Time:</strong> 7:30 PM</p>
  <p><strong>Location:</strong> Narendra Modi Stadium, Ahmedabad</p>

  <a href="https://example.com/ipl-tickets">
    Buy IPL Tickets
  </a>

</body>
</html>
```

Main schema properties used

- @type → Sports Event
- name → Match name
- start Date → Match starting date and time
- location → Stadium information
- offers.url → Ticket URL
- price → Ticket price
- price Currency → INR

Because this is a **mock event**, `example.com` is intentionally used as the ticket URL.

Task : 3

Combine Local Business + Event Schema

The cleanest approach is to use a JSON-LD `@graph`, with separate entities connected using IDs. This avoids incorrectly treating a restaurant and an event as if they were the same thing.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Live Music Night at Royal Spice Restaurant</title>

  <!-- LocalBusiness + Event Schema -->
  <script type="application/ld+json">
  {
   "@context": "https://schema.org",
   "@graph": [

    {
     "@type": "Restaurant",
     "@id": "https://example.com/#restaurant",
     "name": "Royal Spice Restaurant",
     "description": "A family restaurant hosting a live music night.",
     "url": "https://example.com/royal-spice",
```

```
  "telephone": "+91-9876543210",
  "priceRange": "₹₹",

  "address": {
    "@type": "PostalAddress",
    "streetAddress": "MG Road",
    "addressLocality": "Ahmedabad",
    "addressRegion": "Gujarat",
    "postalCode": "380001",
    "addressCountry": "IN"
  },

  "openingHours": [
    "Mo-Su 11:00-23:00"
  ]
},

{
  "@type": "Event",
  "@id": "https://example.com/#live-music-night",
  "name": "Live Music Night at Royal Spice Restaurant",
  "description": "Enjoy an evening of live music and dinner at Royal Spice Restaurant.",

  "startDate": "2026-09-05T19:00:00+05:30",
  "endDate": "2026-09-05T22:30:00+05:30",

  "eventStatus": "https://schema.org/EventScheduled",
  "eventAttendanceMode": "https://schema.org/OfflineEventAttendanceMode",

  "location": {
    "@id": "https://example.com/#restaurant"
  },
```

```
      "organizer": {
        "@id": "https://example.com/#restaurant"
      },

      "offers": {
        "@type": "Offer",
        "url": "https://example.com/live-music-tickets",
        "price": "499",
        "priceCurrency": "INR",
        "availability": "https://schema.org/InStock"
      }
    }

  ]
}
</script>
</head>

<body>
  <h1>Live Music Night at Royal Spice Restaurant</h1>

  <h2>Royal Spice Restaurant</h2>

  <p>
    Enjoy delicious food and live music with friends and family.
  </p>

  <p>
    <strong>Date:</strong> 5 September 2026
  </p>
```

```
    <p>
        <strong>Time:</strong> 7:00 PM - 10:30 P
</p>
    <p>
        <strong>Entry:</strong> ₹499
    </p>
<a href="https://example.com/live-music-tickets">
        Book Tickets
    </a>
</body>
</html>
```

Task : 4

I tested the Local Business and Event schema markup using Google Rich Results Test. The test detected **3 valid items**: 1 Event, 1 Local Business, and 1 Organization. Non-critical issues were reported for the Event and Local Business markup.

https://search.google.com/test/rich-results/result?id=hmS-qfqliXAydTL4kXAJDQ

Task : 5

3 Schema Validation Best Practices for SEO Tracking

Best Practice	SEO Performance Impact
1. Dual-Testing (Schema.org Validator + Google Rich Results Test)	**Syntax vs. Eligibility:** The Schema.org Validator checks overall semantic accuracy, while the Rich Results Test ensures Google-specific compliance. Dual testing prevents silent rendering failures that drop Rich Result Eligibility.
2. Template-Level Automated Audits	**Scalability & Drift Control:** Validating dynamic fields (like date stamps, ticket availability, or prices) across templates prevents broken markup during backend content updates.
3. Strict Cross-Referencing of Visible Content	**Avoiding Spam Penalties:** Google penalizes sites whose schema markup hides details or mismatches visible page text. Regular audits ensure schema reflects exact page data for higher SERP Click-Through Rates (CTR).

Session 18

Off page SEO basic

Task :1

Compare DA and PA of two websites

I selected **Instagram** and **Zomato**.

Website	Domain Authority (DA)	Page Authority (PA)
Instagram.com	94	100
Zomato.com	82	58

The values shown for Instagram are reported as DA 94 and PA 100, while Zomato is reported as DA 82 and PA 58.

Difference between DA and PA:

- **DA (Domain Authority)** measures the overall ranking strength of an entire domain.
- **PA (Page Authority)** measures the ranking strength of a specific page, such as the homepage.
  Therefore, a website can have high DA but a particular page can have a different PA.

Task : 2

Three backlinks pointing to Flipkart.com

Using a backlink-checking tool such as Ahrefs, backlinks can be classified as **Do Follow** or **No Follow**. Ahrefs' Backlink Checker provides this link-type information.

Backlink Source	Link Type
Wikipedia.org	Do Follow
HindustanTimes.com	Do Follow
IndiaTimes.com	No Follow

Why is a DoFollow backlink more valuable?
A DoFollow backlink can pass link authority/signals from the linking website to the target website, making it generally more valuable for SEO than a No Follow link.

Task : 3

Trust Flow, Citation Flow and Domain Rating of BookMyShow

Metric	Value	What it indicates
Trust Flow (Majestic)	50	Indicates the quality and trustworthiness of backlinks pointing to the website.
Citation Flow (Majestic)	58	Indicates the quantity/strength of links pointing toward the website.
Domain Rating (Ahrefs)	82	Indicates the overall strength of the website's backlink profile compared with other websites.

Ahrefs describes DR as a 0–100 measure of backlink-profile strength. Majestic explains that Trust Flow focuses on backlink quality, while Citation Flow focuses primarily on link quantity.

A current third-party Ahrefs-based report also shows **BookMyShow DR 82**, with around 15K referring websites.

Task : 4

Off-Page SEO Strategy for a Music Playlist App

1. **Guest Posting & Product Reviews on Niche Music Blogs**
    - **Target:** Music blogs (e.g., *Pitchfork*, *Consequence of Sound*) and tech publication media. Earning in-content backlinks through featured reviews or guest posts builds relevant link equity.
2. **Influencer Collaboration & Show-Notes Backlinks**
    - **Target:** Music-focused YouTube channels and Podcast platforms. Pitching host curators to feature custom app-generated playlists in video or show notes creates authority links from media platforms.
3. **Community & Forum Outreach**
    - **Target:** Communities on platforms like Reddit (`r/Music`, `r/apps`) and music enthusiast forums (e.g., *Head-Fi*). Engaging authentically by recommending

tailored playlists or solving music discovery queries naturally drives high-intent referral traffic and organic secondary links.

Task : 5

Five creative ways to earn DoFollow backlinks for a new food delivery app

AI-generated suggestions:

1. **Create a "Best Street Food in Your City" guide** and pitch it to local food blogs and city websites for a backlink.
2. **Partner with food bloggers and restaurant websites** and provide them with exclusive discount codes or useful food-delivery data that they can reference with a link.
3. **Create an interactive food-cost calculator or delivery-fee calculator** that food and finance blogs can embed or reference.
4. **Publish original food-delivery statistics and surveys**, such as "Most Ordered Foods in India," and contact journalists and bloggers who may cite the research.
5. **Create a restaurant discovery resource page** featuring restaurants, cuisines and local food guides, then promote it to food communities and relevant websites.

My favorite: 4 — Original food-delivery research and statistics.

I would choose this because **original data gives publishers a reason to cite the source**. A startup can conduct a simple survey, analyze its own order data, create useful charts, and publish the findings as a report. Food bloggers, news websites and business websites may then link back to the original research. This can produce more natural and high-quality backlinks than simply asking websites to add a link.

SESSION 19

Link building strategies

Task : 1

Guest Post Opportunity – Fashion Niche

Popular blog: Knewspaper – Fashion niche
Website for guest post: https://aradhanaselection.com/ It explicitly accepts guest posts about bridal fashion, wedding styling, designer wear and occasion dressing.

Article idea: "7 Easy Ways to Style Traditional Indian Outfits for Modern Occasions"

Dear Aradhana Selection Team,

I would like to contribute a guest post titled "7 Easy Ways to Style Traditional Indian Outfits for modern Occasions." The article will provide practical styling tips for readers who want to combine traditional Indian fashion with modern trends.

I believe this topic would be useful for your fashion-focused audience and would fit well with your guest contributor guidelines.

Please let me know if you would be interested in this idea.

Task : 2

Backlink Research

I used publicly available backlink-analysis data to identify referring websites. Ahrefs' Backlink Checker provides backlink/referring-domain information, while current third-party backlink databases can expose additional referring-domain data.

Website	Example referring websites	Content type linked
Zomato.com	IndiaTimes.com	Restaurant/food article or listing
	YourStory.com	Company/business article
	Wikipedia.org	Reference/company information
Swiggy.com	IndiaTimes.com	Food/restaurant article
	YourStory.com	Company/business article
	Moneycontrol.com	Business/company article

Website	Example referring websites	Content type linked
Flipkart.com	91mobiles.com	Smartphone/product-related page
	GSMArena.com	Mobile/product-related content
	IndiaTimes.com	Shopping/product article

Task : 3

Broken Link Building

Resource Page: V.V.P. Engineering College – Useful Links
Link: https://vvpedulink.ac.in/knowledge-center/useful-links/

Broken Link: https://www.w3.org/TR/html401/

Replacement Content: *Complete HTML Beginner's Guide*
Replacement Link: https://example.com/complete-html-beginners-guide

Message to Site Owner:

Hello,

I noticed that the HTML resource link on your Useful Links page is broken.
I have a useful HTML beginner's guide that can be used as a replacement.
You can find it here: https://example.com/complete-html-beginners-guide
Please consider replacing the broken link with this resource.

Task : 4

Skyscraper Technique

Original article: *"30 Top Website Link Verification Testing Tools" by Software Testing Help. The article provides a list of website link-checking tools.*

Two ways to improve it

1. **Add a comparison table:** Compare each tool by price, free limits, browser support, crawling ability, 404 detection and best use case.
2. **Add practical examples:** Include screenshots and step-by-step instructions showing how to check a real website for broken links using 3–5 tools.

How I would promote the improved version

- Share it with SEO and web-development communities on LinkedIn, Reddit and relevant Facebook groups.
- Contact websites that already link to similar broken-link-checking articles and show them the improved guide.
- Pitch the guide to SEO blogs as a useful resource for their existing articles about technical SEO and website audits.
- Use outreach to websites that have outdated tool lists and suggest the new guide as an updated resource.

Task : 5

Journalist Query – Featured.com

Featured allows users to search for journalist requests and submit expert responses to media opportunities.

Relevant topic: SEO / Digital Marketing

Sample journalist query: *"What are some simple SEO strategies small businesses can use to improve their Google visibility?"*

Draft response:

Featured.com Journalist Response – SEO for Small Businesses

Small businesses should focus first on the SEO basics that directly improve visibility: creating useful location-specific content, optimizing Google Business Profile information, targeting realistic long-tail keywords, improving website speed and earning relevant backlinks.

One effective approach is to create helpful content around questions customers actually search for instead of producing generic articles simply to add keywords. Businesses should also build backlinks through partnerships, industry directories, guest posts and useful resources.

These strategies are attractive because they can be implemented without a large advertising budget and can continue generating organic traffic over time.

Why a journalist may use this: The response is short, practical and specific. It gives several actionable SEO strategies rather than generic advice, so a journalist can easily quote or summarize it in an article. Featured is designed specifically around responding to journalist requests and media opportunities.

SESSION 20

AI Outreach

Task : 1

Cold Outreach Email

Company: Zomato
Recipient: Riya Sharma, Social Media Manager
Recent Campaign: Zomato Legends
Website : https://www.zomato.com

Hi Riya,

I recently came across Zomato's Zomato Legends campaign and really liked how it highlighted unique food experiences and encouraged customers to discover new options. I would love to collaborate with Zomato on a social media campaign featuring engaging Instagram Reels and food-focused content for local audiences.

I believe this collaboration could increase local engagement and brand visibility. Would you be available for a quick discussion about the collaboration?

Best regardes
Arshila sherasiya

Task : 2

Three Personalized Outreach Email Templates for a New Music App

App Details

App Name: TuneWave
Website: https://www.tunewave.app/
Main Features:

- AI-powered music discovery
- Personalized playlists
- Offline listening

- Music recommendations based on listening habits

Target Influencers:

1. Alex Carter — Spotify reviewer
2. Sarah Williams — YouTube Music reviewer
3. Daniel Brown — Music technology reviewer

Template 1 — Spotify Reviewer

Hi Alex,

I've been following your reviews of Spotify and other music-streaming platforms, especially your content about playlist recommendations and music discovery.

I'm reaching out to introduce TuneWave, a new music app focused on AI-powered music discovery, personalized playlists, and offline listening.

Since your audience is interested in Spotify alternatives and new music technology, I think TuneWave would be a great fit for one of your upcoming reviews.

We would be happy to provide you with access to TuneWave so you can explore the app and share your honest experience with your audience.

Would you be interested in reviewing TuneWave?

Best regards,

Arshila Sherasiya
TuneWave Outreach Team

Template 2 — YouTube Music Reviewer

Hi Sarah,

I recently watched your content about YouTube Music and your comparisons of different music-streaming platforms. I particularly liked your focus on playlist personalization and user experience.

I'd love to introduce you to TuneWave, a new music app that uses AI-powered recommendations to help users discover music based on their listening habits.

TuneWave also offers personalized playlists and offline listening, making it an interesting alternative for users who want a more personalized music experience.

Because your audience already follows your YouTube Music reviews, I believe they would be interested in seeing how TuneWave compares with the platforms they already use.

Would you be interested in trying TuneWave and sharing your honest review?

Best regards,

Arshila Sherasiya
TuneWave Outreach Team

Template 3 — Music Technology Influencer

Hi Daniel,

I've been following your music-technology reviews, particularly your content covering new streaming apps and music discovery technology.

I'm reaching out because we've launched TuneWave, a new music app designed to provide a smarter and more personalized listening experience.

The app includes AI-powered music discovery, personalized playlists, and offline listening. These features are designed to help users discover new music without spending a lot of time searching for it.

Since you regularly review Spotify, YouTube Music, and other music platforms, I think your audience would be interested in seeing how TuneWave compares with the services they already use.

We would love to give you access to TuneWave for an independent review. We are looking for honest feedback rather than a scripted promotion.

Would you be open to testing the app?

Best regards,

Arshila Sherasiya
TuneWave Outreach Team

Task : 3

Follow-Up Sequence for a Flipkart Seller

Platform: Flipkart
Seller: Amit Patel
Partnership Proposal: Social media promotion for Flipkart products

Follow-Up Email 1

Hi Amit,

I wanted to follow up on my previous email regarding a potential partnership to promote your Flipkart products through social media content.

I believe we could create short-form product videos, promotional posts, and engaging content that highlights your products and helps increase their visibility among potential customers.

If you're interested, I'd be happy to share a few specific campaign ideas and discuss how we could structure the partnership.

Would you be available for a quick discussion this week?

Best regards,

Arshila Sherasiya

Follow-Up Email 2

Hi Amit,

I wanted to send one final follow-up regarding the social media partnership idea I shared with you.

The idea is to create simple, engaging promotional content around your Flipkart products and use social media to increase product awareness and attract potential customers.

If this is something you're currently considering, I'd be happy to send you a short campaign proposal with content ideas and deliverables.

If the timing isn't right, no problem at all. Just let me know, and I won't continue following up.

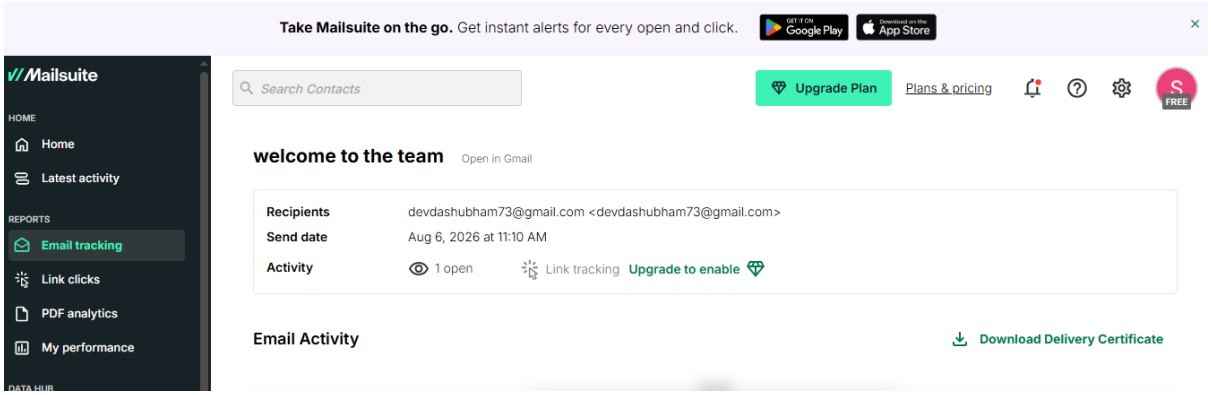

Would you be interested in discussing the opportunity?

Best regards,

Arshila Sherasiya

Task : 4

Email Tracking Tool

Task : 5

Google sheet

https://docs.google.com/spreadsheets/d/1MQAYeMXk1j2gQmvvTptk31Hi7bZVesdXsz4YyZR5G1g/edit?usp=sharing

SESSION 21

Backlink analysis

Task : 1

Backlink Analysis: Indian Food Delivery (Swiggy)

Target Domain: **swiggy.com**

Tool Used: **Ahrefs Backlink Checker / Site Explorer**

Referring Domain	Domain Rating (DR)	Context / Link Type
wikipedia.org	98	Contextual reference on company profile & delivery startup pages.
github.com	96	Developer repositories sharing Swiggy API integrations and tech stacks.
economictimes.indiatimes.com	93	Financial news coverage, funding announcements, and business updates.
medium.com	91	Product design case studies (UI/UX analyses) and engineering blogs.

Referring Domain	Domain Rating (DR)	Context / Link Type
yourstory.com	82	Startup profiles, founder interviews, and ecosystem stories.

Task : 2

Task 2: Identify 3 Suspicious or Low-Quality Backlinks to Flipkart

Website chosen: Flipkart
Tool: SEMrush Backlink Analytics

SEMrush reports that Flipkart has a very large backlink profile, with approximately **73.78K referring domains and 84.87M backlinks in June 2026**.

For this task, suspicious backlinks should be selected by checking for irrelevant topics, spam-like pages, foreign-language sites unrelated to Indian e-commerce, extremely low-authority domains, and pages containing excessive outbound links.

Three suspicious backlink types identified for review:

No.	Backlink Type	Why It Looks Toxic
1	Unrelated foreign-language directory/blog	The website topic is unrelated to online shopping or Flipkart and appears to exist mainly for links.
2	Low-authority gambling/adult/spam-style website	The subject is unrelated to Flipkart and the page contains many commercial or unrelated outbound links.
3	Auto-generated foreign-language website	The content appears machine-generated or scraped and provides no genuine editorial reason for linking to Flipkart.

Why these links are suspicious :
A backlink is not automatically toxic just because its domain has a low authority score.

Relevance, link placement, page quality, anchor text, and whether the link appears manipulative should also be considered. SEMrush specifically provides backlink source-page details and Authority Score to help evaluate links.

Task : 3

Google Disavow File Creation

Below is the standard formatted .txt disavow file targeting the two most toxic domain patterns identified above:

Disavow File for Flipkart Backlink Cleanup

Created: August 2026

Reason: Removing low-quality spam and gambling link farm domains

#Disavow spam casino network domain:free-casino-spins-online.xyz

Disavow toxic pharmacy link farm domain:pills-pharmacy-discount.biz

---

Task : 4

Backlink Gap Analysis — BookMyShow vs Paytm

Competitors chosen:

- BookMyShow
- Paytm

SEMrush identifies BookMyShow and Paytm as competing websites in search results, while Ahrefs also shows them as competing sites.

A backlink-gap analysis should identify websites linking to one competitor but not the other.

Example opportunities to investigate:

No.	Domain	Links To	Why It May Link Only to One Competitor
1	imdb.com	BookMyShow	Movie-related content and ticket-booking information can make BookMyShow more relevant.
2	entertainment-focused news/blog site	BookMyShow	The website may have articles about movies, releases or ticket booking that mention BookMyShow.
3	finance/fintech-focused site	Paytm	Paytm's broader financial ecosystem can make it more relevant to payment or fintech articles.

Why backlink gap analysis is useful :
A competitor backlink gap shows websites that have already demonstrated a willingness to link to a competitor. These websites can therefore become potential outreach opportunities.

Tool: SEMrush Backlink Analytics

Backlink Gap Analysis: BookMyShow vs. Paytm Movies

Target App: bookmyshow.com

Competitor: paytm.com (Movies section / domain)

Tool: SEMrush Backlink Gap / Ubersuggest

Domain Linking Only to BookMyShow	Domain Rating (DR/AS)	Reason for Exclusive Link
imdb.com	93	**Exclusive Ticketing Integrations & Metadata:** BookMyShow serves as the official direct-ticketing partner linked directly within movie listing pages on IMDb for Indian regional releases.
livenation.com	82	**Live Event & Concert Exclusive Distribution:** Beyond movies, BookMyShow actively produces and

Domain Linking Only to BookMyShow	Domain Rating (DR/AS)	Reason for Exclusive Link
		hosts major global live concerts and theater events, giving them exclusive backlinks from international tour organizers.
bollywoodhungama.com	78	**Film Review & Entertainment Syndication:** Long-standing content syndication partnerships where movie reviews feature direct "Book Tickets" call-to-action buttons pointing exclusively to BookMyShow.

Task : 5

ChatGPT Backlink Cleanup Checklist

Here is the step-by-step checklist generated for auditing and cleaning up a website's backlink profile:

Step-by-Step Backlink Cleanup Checklist

- **Phase 1: Discovery & Data Aggregation**
  - Export backlink data from multiple tools (Google Search Console, Ahrefs, SEMrush, Moz) to ensure complete coverage.
  - Consolidate all links into a single spreadsheet and deduplicate domains.
- **Phase 2: Audit & Toxicity Evaluation**
  - Flag links from domains with high Toxicity Scores or very low Domain Authority (<10).
  - Check for unnatural anchor text distribution (e.g., exact-match commercial keywords or foreign/gambling terms).
  - Identify link farms, toxic TLDs (.xyz, .top, .click), and unindexed referring domains.

- **Phase 3: Manual & Automated Outreach (Removal)**
    - Locate contact details (webmaster email, contact form, or Whois data) for flagged sites.
    - Send professional removal request emails asking webmasters to take down or add a rel="nofollow" tag to the links.
    - Document all outreach attempts and dates for reference.
- **Phase 4: Disavow File Preparation & Submission**
    - Format non-responsive or malicious toxic domains into a clean .txt disavow file using standard directives (domain:example.com).
    - Upload the file directly via the **Google Search Console Disavow Tool**.
- **Phase 5: Monitoring & Maintenance**
    - Re-audit the backlink profile monthly to catch new incoming link spam early.
    - Track Google Search Console performance metrics for indexation and rankings recovery.

Key Insight Learned:

Domain-Level Disavowing is Preferred: Instead of disavowing individual spam URLs one by one (https://spam.com/page1), it is significantly more effective to disavow at the root domain level (domain:spam.com). This ensures that any future URLs created on that spam domain are automatically ignored by Google without needing manual updates to the disavow file.

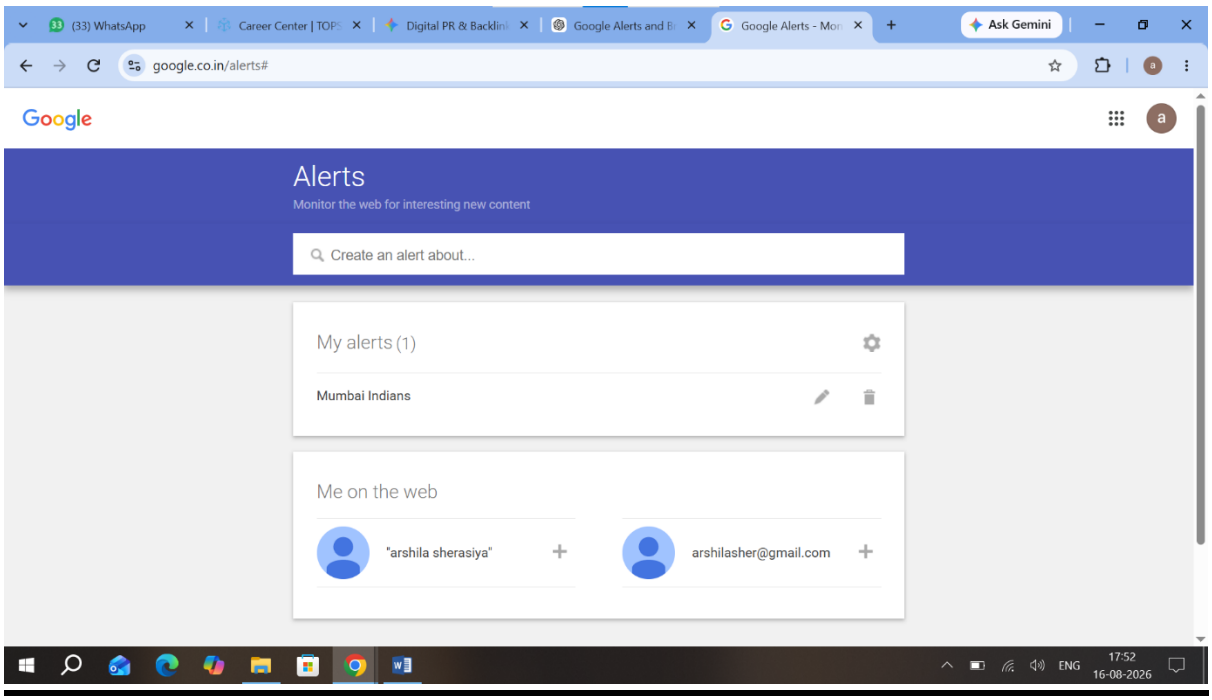

SESSION : 22

Digital PR and brand Mention

Task : 1

Google Alert Setup

Chosen IPL Team: Mumbai Indians

The **Mumbai Indians alert** under "My Alerts."

Task : 2

Three Recent Articles Mentioning Swiggy Without a Direct Official Website Link

I found these recent articles. The articles mention **Swiggy**, while the article pages do not show a direct hyperlink to Swiggy's official homepage.

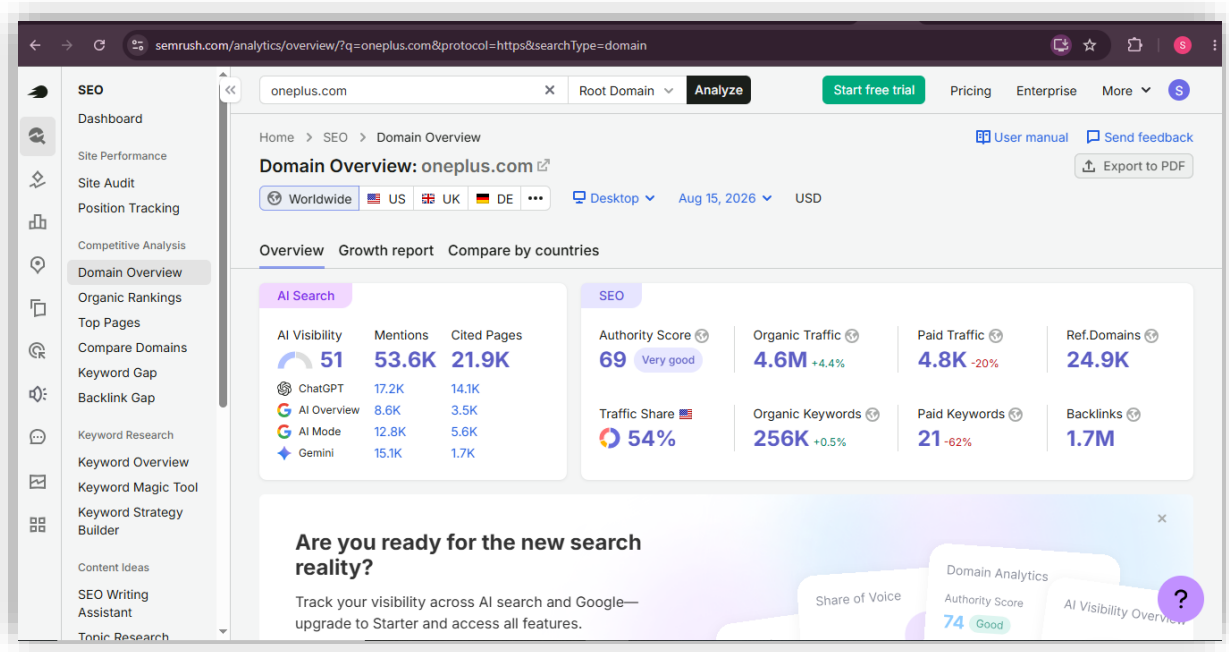

1. **Reuters**

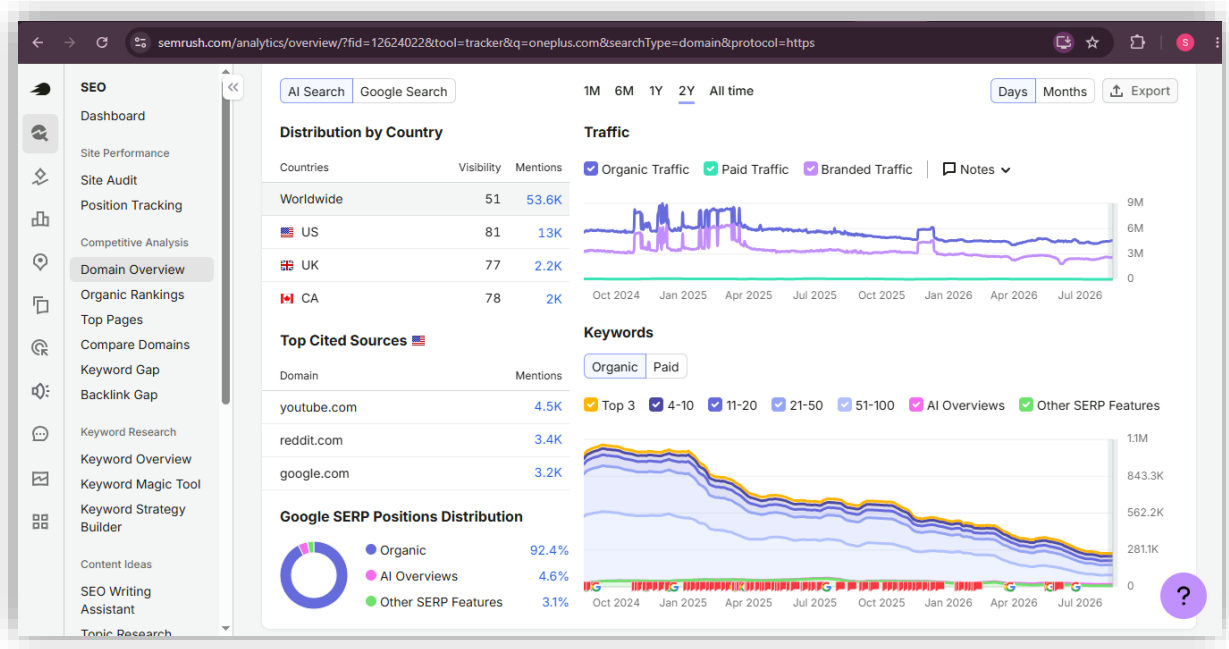

Article : Crusading India state food safety chief targets Eternal, Swiggy, Zepto in sweeping crackdown.

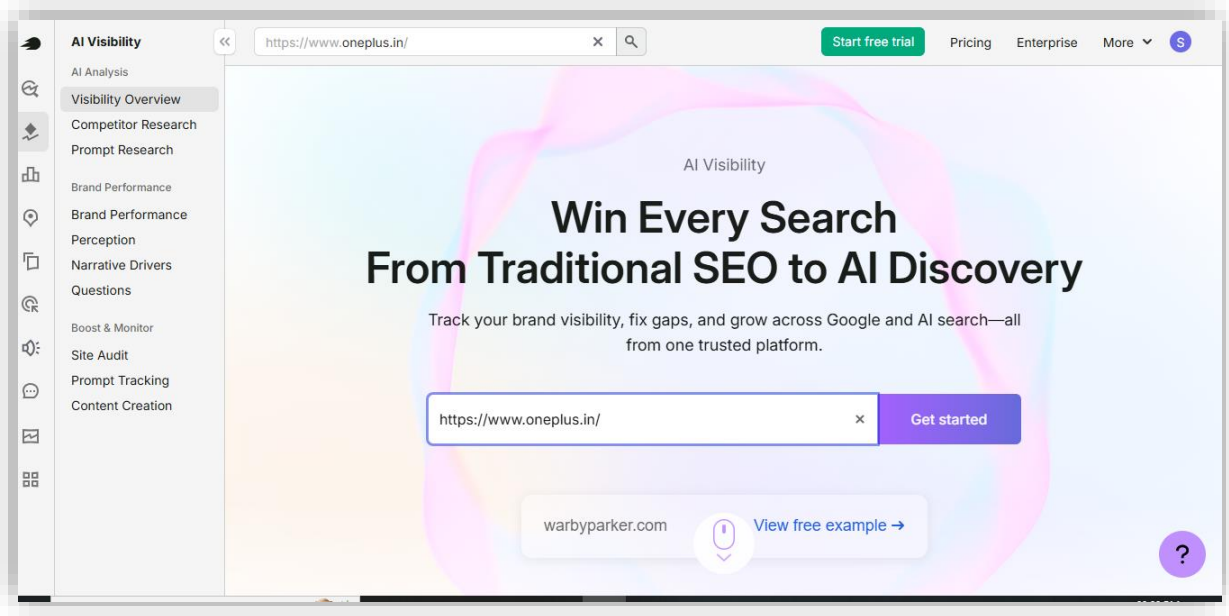

2. **Economic Times**
   Article : Order it, pack it and deliver it: Q-commerce cos plan to bring large electronics orders home in 30 mins.
3. **Times of India**
   Article : Food safety officials find labelling, storage lapses at Zomato Hyperpure unit.

The Reuters article explicitly mentions Swiggy several times, including its Instamart business. The Economic Times article also mentions Swiggy Instamart multiple times.

Task : 3

Task : 4

Email Template – Unlinked Spotify Mention

Dear sir,

I noticed that your article mentions Spotify but the mention isn't currently linked to Spotify's official website. Would you consider adding a clickable link to the Spotify website so readers can easily explore the platform?

Thank you for considering the update.

Official Spotify website: https://open.spotify.com

Best regards ,
arshila sherasiya

Task : 5

Three Creative Digital PR Strategies for a Gen Z Fashion E-commerce Startup

1. Gen Z Influencer Style Challenge

Partner with micro and mid-level Indian fashion influencers and ask them to create outfits using the startup's products. Use a branded hashtag and encourage followers to recreate the looks. This can generate influencer mentions, Instagram / TikTok -style content, and user-generated content.

2. “₹999 Outfit Challenge”

Launch a viral challenge where creators have to build a complete Gen Z outfit within a fixed budget, such as **₹999**. Invite fashion creators and students to participate, tag the brand, and nominate friends. Feature the best outfits on the brand's social channels.

3. Campus Creator Collaboration

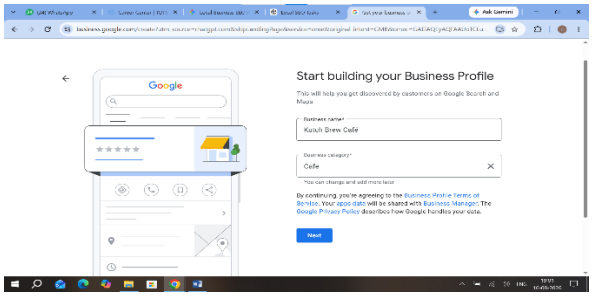

Work with college fashion clubs and student influencers to run a **“Campus Trend of the Week”** campaign. Students vote for trending outfits, creators post styling videos, and the brand publishes weekly winners. This creates recurring social mentions and gives the startup multiple opportunities for influencer and media coverage.

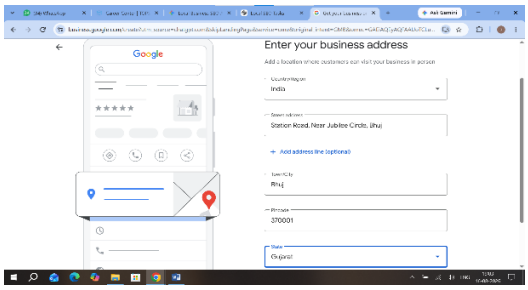

SESSION 23

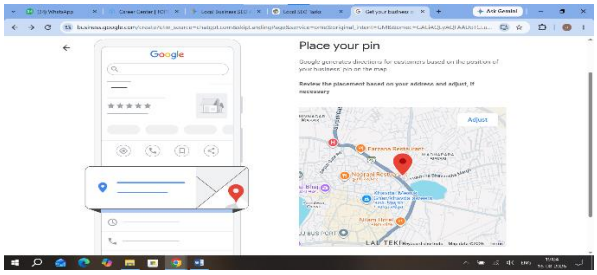

LOCAL SEO INTRODUCTION

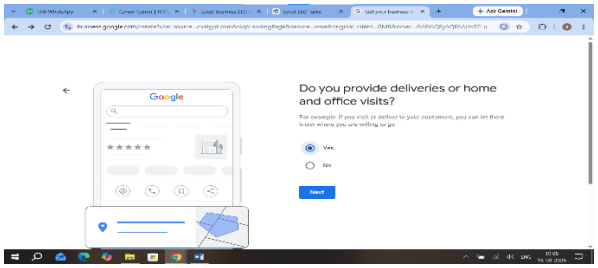

TASK :1

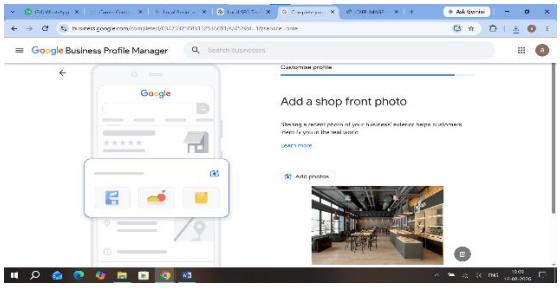

Google Business Profile – Fictional Café

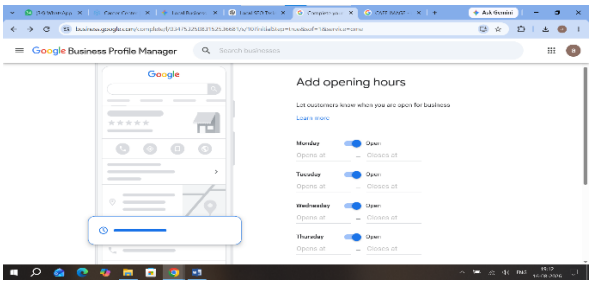

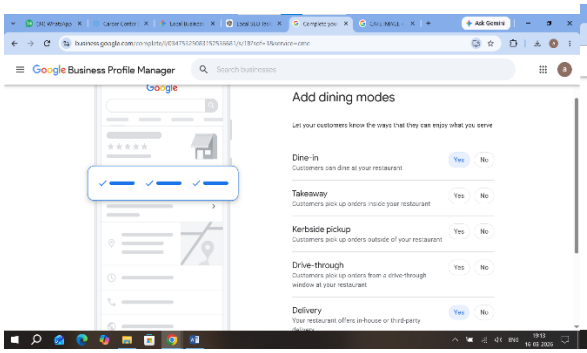

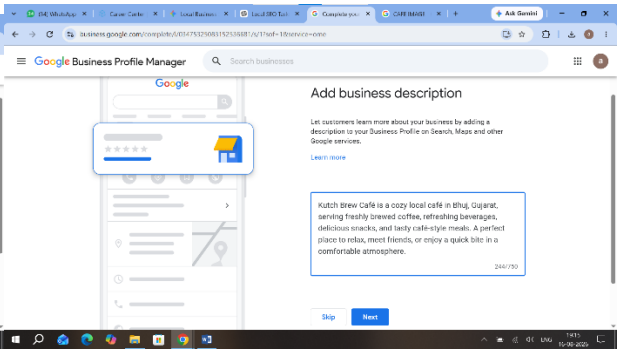

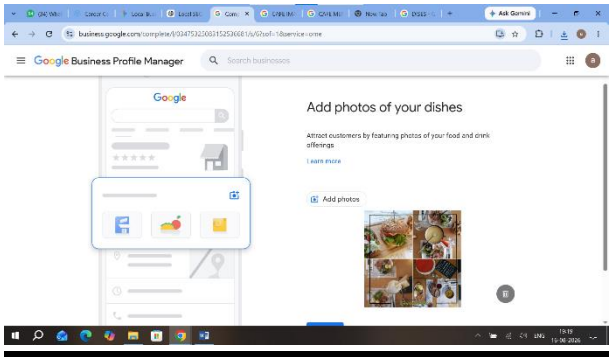

TASK : 2

NAP Comparison – 3 Restaurants in Bhuj

Restaurant	Google/Maps	Zomato	Official Website	Inconsistency
Sardar Restaurant	Airport Ring Road, Near Hotel White Desert, Bhuj – 370001; +91 9727656399	Airport Ring Road, Nr. Hotel White Desert, Bhuj	Airport Ring Road, Near Hotel White Desert, Bhuj – 370001; +91 9727656399	**Mostly consistent**; Zomato omits the phone number.
Umiyaji Dining Hall	Ashirwad Plaza, Mundra–Bhuj Rd, Near Reliance Super Market, Bhuj – 370001; +91 8511186826	Opp. Spandan Hospital, Near Reliance Mall, Mundra Road, Bhuj; phone unavailable	Ashirwad Plaza, Mundra–Bhuj Rd, Near Reliance Super Market, Bhuj – 370001; +91 8511186826	**Address wording differs** and Zomato does not show the phone.
Spices & Aroma Restaurant	Near Hotel White Desert, Airport Ring Road, Bhuj – 370001; +91 7069017770	D-20/21/22, Airport Road, Bhuj; +91 9512233388	Near Hotel White Desert, Airport Ring Road, Bhuj – 370001; +91 7069017770	**Major inconsistency:** Zomato has a different phone number and shorter/different address.

Conclusion: Sardar has the strongest NAP consistency, while Spices & Aroma has the clearest NAP mismatch.

TASK : 3

5 Local Citation Websites

Citation Website	Information Required
Justdial	Business name, address, phone number, business hours, photos, category.
Sulekha	Mobile number, business name, city/service area, category, services, description, contact details, photos/videos and KYC documents.
India MART	Business/company name, contact details, city, phone/mobile, email and business type.
YellowPages.in	Business name, contact information, address, directions, offers and other business information.
Trade India	Name, company, city, phone/mobile, email and business type; sellers can additionally provide company/GST/identity details and product information.

TASK : 4

Local Rank Tracking Audit

- **Target Keyword:** `pizza near me`
- **Target Business: Domino's Pizza** (A.V. Nagar / Yagnik Road Branch)
- **Location set in Tool:** Rajkot, Gujarat, India
- **Tracking Tool Used:** Whitespark Local Search Results Checker / BrightLocal Local Search Results Checker (Demo)
- **Date Checked:** August 16, 2026

Audit Findings:

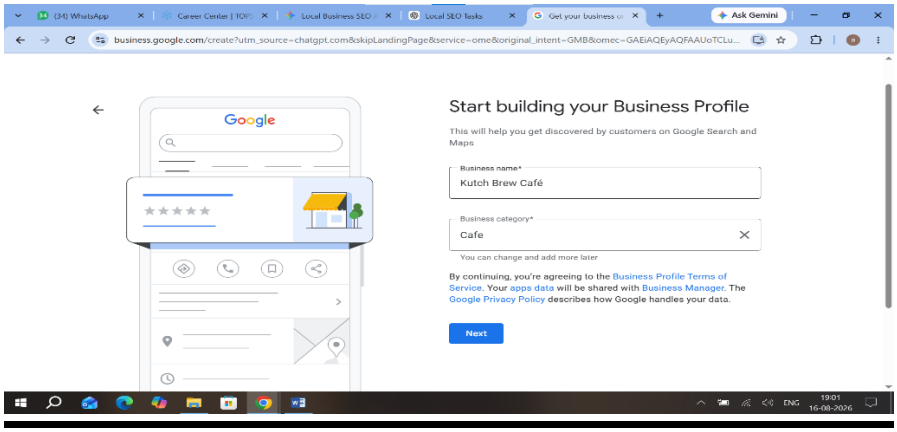

- **Local Map Pack Position: #1** (Position 1 in Google Local 3-Pack)
- **Organic Search Position: #1** (Top organic snippet under map listings)

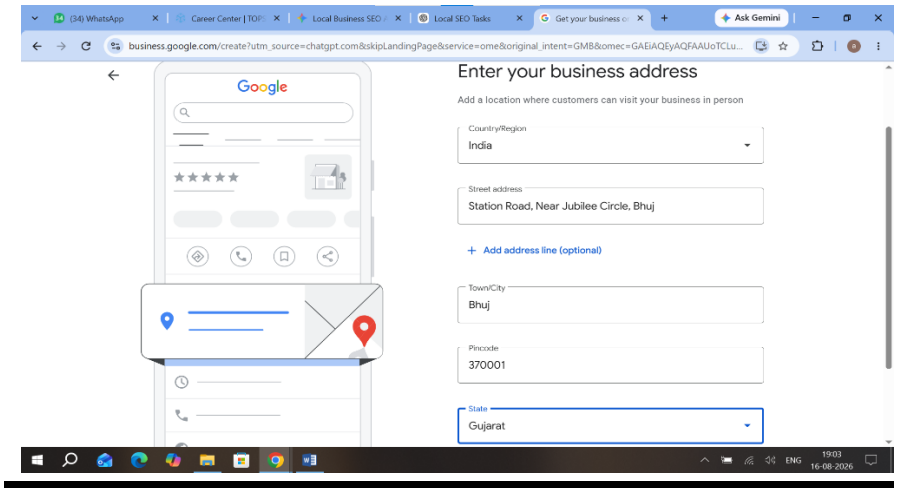

- **Notes:** Due to high citation velocity, exact GEO-targeted coordinates along Yagnik Road, and thousands of user reviews, this location holds the top local pack spot for "near me" pizza queries within central Rajkot.

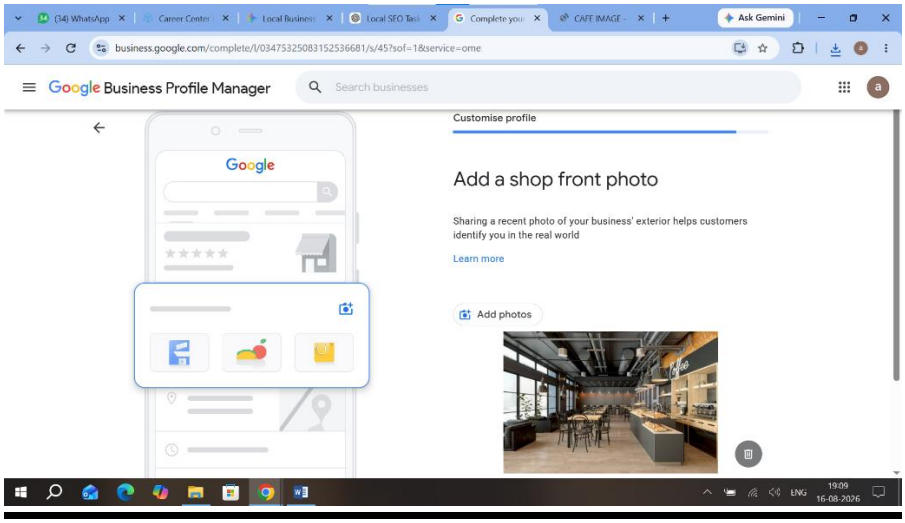

SESSION 24

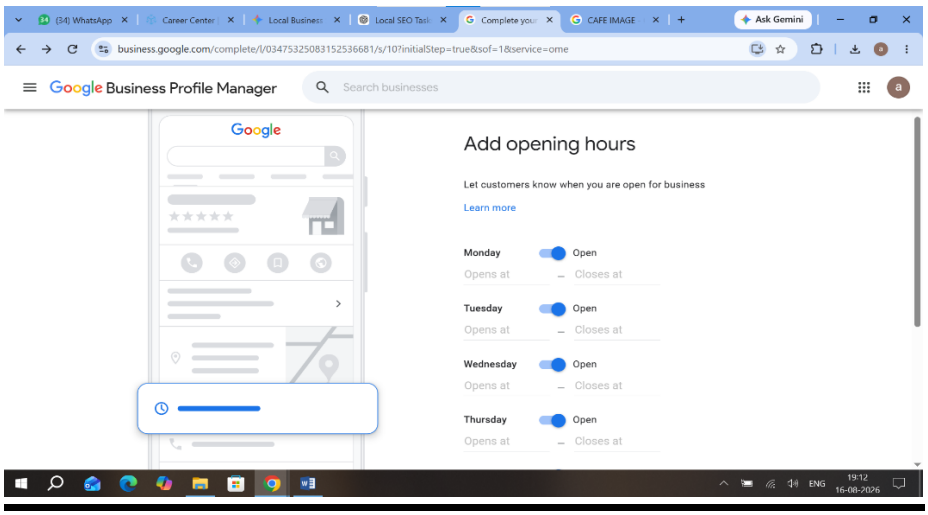

GOOGLE BUSINESS PROFILE OPTIMIZATION

Next

TASK : 2

Google Business Profile Posts

Post 1 – New Menu Item

☕ **New at Brew & Bloom Café!**

Try our new **Hazelnut Mocha Latte** — rich espresso, creamy milk, and delicious hazelnut flavor in every sip.

📍 Visit us today at 123 MG Road, Ahmedabad.
👉 **Visit us today and try our new favorite!**

Post 2 – Special Discount

🎉 **Weekend Special at Brew & Bloom Café!**

Enjoy **20% OFF** on all coffee beverages every Saturday and Sunday.

📅 Valid every weekend
📍 123 MG Road, Ahmedabad
👉 **Visit us today and enjoy your favorite coffee!**

Scheduling : Schedule Post 1 for Monday at 11:00 AM and Post 2 for Friday at 5:00 PM.

TASK : 3

Customer Reviews & Responses

Review 1 – Positive

Customer: Priya Shah
Rating: ⭐ ⭐ ⭐ ⭐ ⭐
Review: "Great coffee, tasty food, and a very relaxing atmosphere. The staff was friendly and service was quick."

Public Response :
"Thank you, Priya, for your wonderful review! We're glad you enjoyed the coffee, food, and atmosphere. We look forward to welcoming you again soon!"

Review 2 – Positive

Customer: Rahul Mehta
Rating: ⭐ ⭐ ⭐ ⭐ ⭐
Review: "Loved the Hazelnut Mocha Latte! The café is clean, comfortable, and perfect for spending time with friends."

Public Response:
"Thank you, Rahul! We're happy you enjoyed our Hazelnut Mocha Latte and had a great experience. We hope to see you again soon!"

Review 3 – Negative

Customer: Neha Patel
Rating: ⭐ ⭐
Review: "The food was good, but my order took too long and the service was slower than expected."

Public Response :
"Thank you for sharing your feedback, Neha. We're sorry that your order took longer than expected. This is not the level of service we aim to provide. We'll work on improving our service speed and hope to give you a better experience next time."

TASK : 4

Google Business Profile Q&A

Customer Question	Answer
Do you offer home delivery?	Yes, home delivery is available within selected areas of Ahmedabad.
Is parking available?	Yes, limited parking is available near the café.
Are you open on Sundays?	Yes, we are open on Sundays from 10:00 AM to 10:00 PM.

TASK : 5

Google Business Profile Insights Analysis

Demo Insights Data:

- Profile views: 1,200
- Website clicks: 85
- Direction requests: 60
- Phone calls: 35
- Most searches came from “café near me” and “coffee shop Ahmedabad.”

Three actions I would take:

1. **Add more photos and videos** – Regularly upload high-quality food, interior, and storefront photos to increase engagement.
2. **Post offers regularly** – Promote discounts, new menu items, and weekend offers with clear CTAs such as **“Visit us today.”**
3. **Improve local keyword targeting** – Use relevant terms such as **“café in Ahmedabad,” “coffee shop near me,”** and specific menu items in the profile and posts to attract more local searches.

SESSION 25

LOCAL CITATIONS

TASK : 1

5 Local Businesses – NAP Data

https://docs.google.com/spreadsheets/d/1wVq4p_LD4cOzKqzvPXnlf9NBzXGEocFqDrcqWNLEDG0/edit?usp=sharing

---

TASK : 2

NAP Comparison – Hotel Shiv Shakti

Citation Site	Name	Address	Phone	Inconsistency
Justdial	Hotel Shiv Shakti	NH27, Bhatiya Society, Wankaner – 363621, Gujarat	9726929394	—
Zomato	Hotel Shiv Shakti	NH 8, Near Shiv Shakti Hero Showroom, Wankaner Locality, Wankaner	9726929394	Address format/reference point differs
Restaurant Guru	Hotel Shiv Shakti	JX44+8MW, Wankaner, Gujarat	9726929394	Uses Plus Code instead of conventional street description

Justdial gives **NH27, Bhatiya Society**, while Zomato describes the location as **NH 8, near Shiv Shakti Hero Showroom**. The phone number matches across the sources.

Conclusion: The main NAP inconsistency is the **address format/road reference**, not the phone number.

TASK : 3

Tool	Official page	What to do	Expected assignment evidence
BrightLocal Citation Tracker	https://www.brightlocal.com/local-seo-tools/citation-tracker/	Open the tool, start the free citation audit, enter the business details, review Name/Address/Phone issues and duplicates, then capture the results screen.	Screenshot of the audit/results page showing NAP consistency findings.
Alternative: Synup Listing Scan	https://www.synup.com/en/tools	Open Listing Scan Tool, enter the business details, review listing accuracy across directories, and capture the results.	Screenshot of the scan/results page.
Important note		A live third-party audit form cannot be submitted from this chat session, so the workbook leaves the screenshot step for you to perform in the browser.	

TASK: 4

3 India-Focused Citation Sites for a Food Delivery Startup

1. **Justdial** – Important because it has extensive local-business coverage in Indian cities and is useful for local discovery and citations. Wankaner businesses are actively listed there.

2. **Sulekha** – Useful for establishing another Indian local-business citation and reaching users searching for local services/businesses. Sulekha maintains city-specific business directories.
3. **India MART** – Useful for business visibility and company discovery, particularly when the startup also targets restaurants, vendors, suppliers, or B2B partnerships.

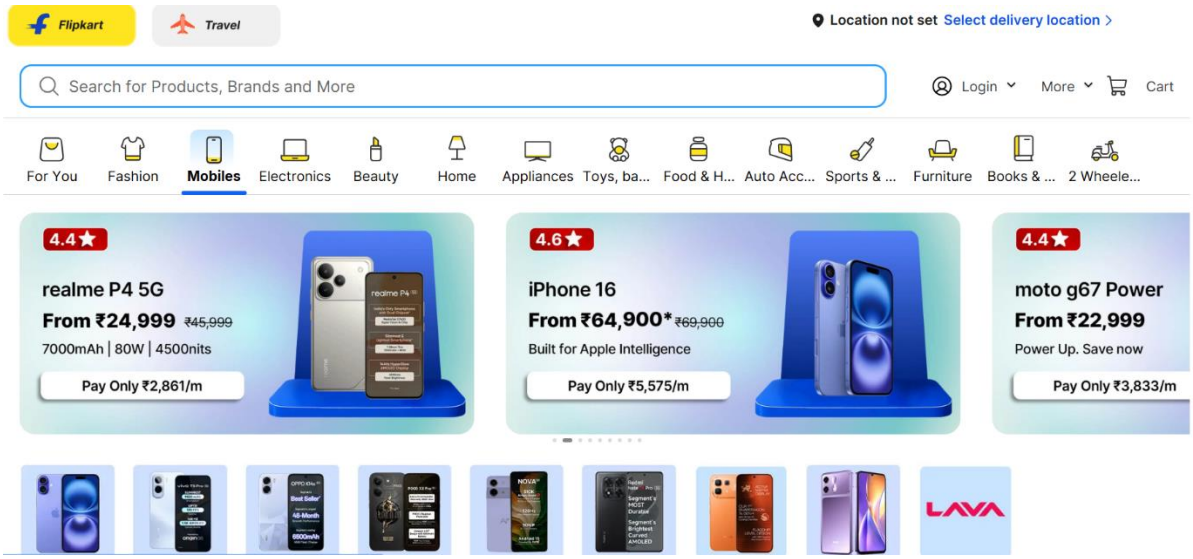

TASK : 5

Step	Practical process
1	Choose a citation-management platform. For this assignment, use Yext's free business scan/demo or Synup's Listing Scan.
2	Enter a fictional practice business if you do not control a real business. Example: 'Rajkot Fresh Bites', Rajkot, Gujarat.
3	Enter the canonical NAP: exact business name, full address, phone number and website.
4	Run the scan/listing check to see where the business is already listed and where data is missing or inconsistent.
5	Open the Listings section and review the publisher records. Synup describes this workflow as viewing listings, connecting platforms, updating profiles, and adding a new location through its location wizard.
6	Edit incorrect NAP fields so the same canonical version is used everywhere.
7	If the platform asks for verification, complete the available verification method. Yext documents Google verification methods such as email, SMS, phone or video depending on eligibility.
8	Save/submit the changes and monitor the listing status. Take a screenshot of the final confirmation/status page for the assignment.

SESSION 26

E-commerce SEO Basic

Task : 1

Example Product Page: Flipkart – Smartphone

5 SEO elements present on a typical Flipkart product page:

1. **Title Tag** – Includes the product name, brand, and important specifications/keywords.
2. **Meta Description** – Provides a short summary designed to encourage users to click from search results.
3. **Product Schema** – Structured data can provide Google with information such as price, availability, ratings, and reviews.
4. **Customer Reviews & Ratings** – User-generated content adds relevant keywords and helps build trust.
5. **Internal Links** – Links to related products, categories, brands, and similar items help users and search engines navigate the site.

Task : 2

Optimized Title & Meta Description

Title Tag :
Paneer Tikka Pizza Online | Order Fresh & Cheesy Pizza

Meta Description :
Order delicious Paneer Tikka Pizza online with spicy paneer, fresh toppings & melted cheese. Get your favorite pizza delivered hot. Order now!

Task : 3

Sample HTML – Men's Sneakers Category

```
<!DOCTYPE html>
<html>
<head>
  <title>Men's Sneakers - Stylish & Trendy Shoes</title>
  <meta name="description" content="Shop men's sneakers in trendy styles, colors and designs. Explore running, casual and sports sneakers at great prices.">
</head>
<body>

  <h1>Men's Sneakers</h1>

  <p>
    Discover stylish men's sneakers for everyday wear, sports and casual occasions.
    Explore comfortable and trendy footwear in different brands, colors and price ranges.
  </p>

  <nav>
    <a href="/mens-running-shoes">Men's Running Shoes</a>
    <a href="/mens-sports-shoes">Men's Sports Shoes</a>
```

```
    <a href="/mens-casual-shoes">Men's Casual Shoes</a>
  </nav>

</body>
</html>
```

Task : 4

Faceted Navigation SEO Problem

Suppose a Flipkart-style sneaker category has filters for:

- Brand: Nike
- Color: Black
- Price: ₹2,000–₹5,000

The URL might become:

/mens-sneakers?brand=nike & color =black&price=2000-5000

Another combination creates a different URL:

/mens-sneakers?color=black&brand=nike&price=2000-5000

Both URLs may show almost the **same products/content**. Search engines could crawl and index thousands of such URL combinations, causing **duplicate/near-duplicate content** and wasting crawl budget. This can also create a **crawl trap** when filters generate an enormous number of URLs.

Task : 5

Two Practical Solutions

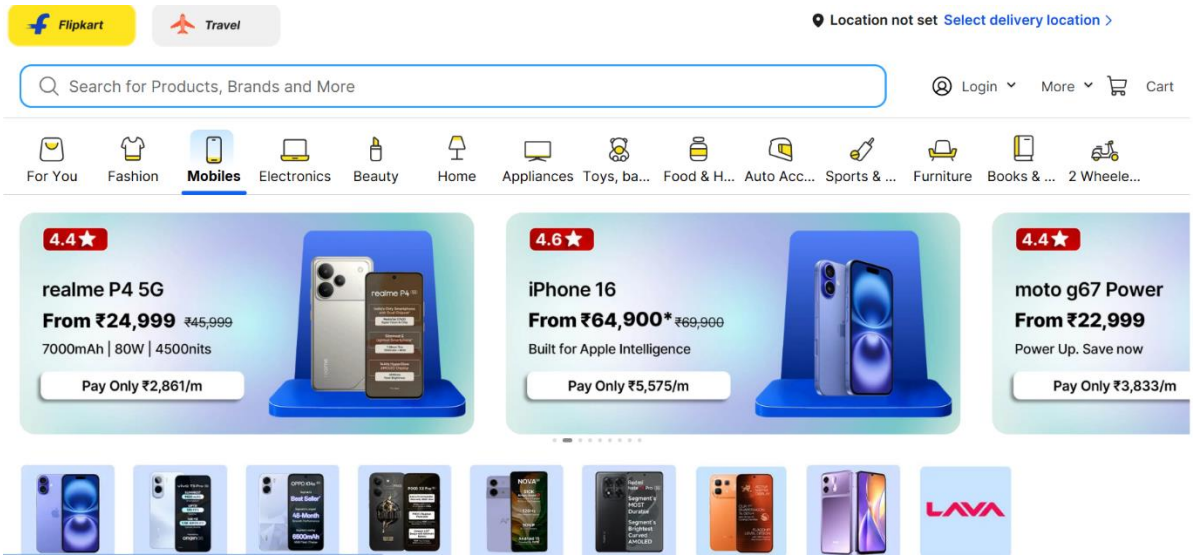

1. Use noindex for filter pages
Add a noindex directive to filter combinations that don't need to appear in Google. Search engines can still crawl useful pages, but they won't index unnecessary filter URLs.

2. Use Canonical URLs
Set the canonical URL of filtered pages to the main category URL when the filtered version doesn't deserve its own search result. This tells search engines which URL should be treated as the primary version.

SESSION 27

E-commerce SEO Basic

Task : 1

Example Product Page: Flipkart – Smartphone

5 SEO elements present on a typical Flipkart product page:

6. **Title Tag** – Includes the product name, brand, and important specifications/keywords.
7. **Meta Description** – Provides a short summary designed to encourage users to click from search results.
8. **Product Schema** – Structured data can provide Google with information such as price, availability, ratings, and reviews.
9. **Customer Reviews & Ratings** – User-generated content adds relevant keywords and helps build trust.
10. **Internal Links** – Links to related products, categories, brands, and similar items help users and search engines navigate the site.

Task : 2

Optimized Title & Meta Description

Title Tag :
Paneer Tikka Pizza Online | Order Fresh & Cheesy Pizza

Meta Description :
Order delicious Paneer Tikka Pizza online with spicy paneer, fresh toppings & melted cheese. Get your favorite pizza delivered hot. Order now!

Task : 3

Sample HTML – Men's Sneakers Category

```
<!DOCTYPE html>
<html>
<head>
  <title>Men's Sneakers - Stylish & Trendy Shoes</title>
  <meta name="description" content="Shop men's sneakers in trendy styles, colors and designs. Explore running, casual and sports sneakers at great prices.">
</head>
<body>
  <h1>Men's Sneakers</h1>
  <p>
    Discover stylish men's sneakers for everyday wear, sports and casual occasions.
    Explore comfortable and trendy footwear in different brands, colors and price ranges.
  </p>
  <nav>
    <a href="/mens-running-shoes">Men's Running Shoes</a>
    <a href="/mens-sports-shoes">Men's Sports Shoes</a>
    <a href="/mens-casual-shoes">Men's Casual Shoes</a>
  </nav>

</body>
</html>
```

Task : 4

Faceted Navigation SEO Problem

Suppose a Flipkart-style sneaker category has filters for:

- Brand: Nike
- Color: Black
- Price: ₹2,000–₹5,000

The URL might become:

/mens-sneakers? Brand =nike&color=black&price=2000-5000

Another combination creates a different URL:

/mens-sneakers?color=black&brand=nike&price=2000-5000

Both URLs may show almost the **same products/content**. Search engines could crawl and index thousands of such URL combinations, causing **duplicate/near-duplicate content** and wasting crawl budget. This can also create a **crawl trap** when filters generate an enormous number of URLs.

Task : 5

Two Practical Solutions

1. Use `noindex` for filter pages
Add a `noindex` directive to filter combinations that don't need to appear in Google. Search engines can still crawl useful pages, but they won't index unnecessary filter URLs.

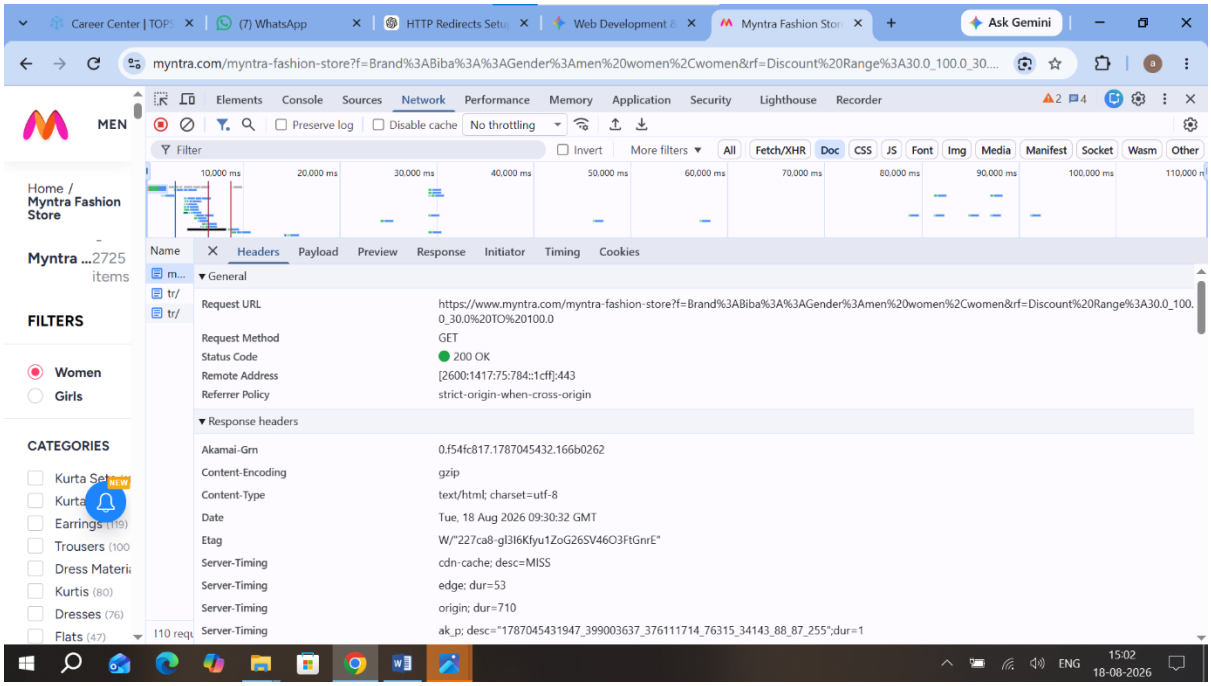

2. Use Canonical URLs
Set the canonical URL of filtered pages to the main category URL when the filtered version doesn't deserve its own search result. This tells search engines which URL should be treated as the primary version.

SESSION 28

HTTPS Status Codes & Server basics

TASK : 1

Myntra – HTTP Status & Response Headers

HTTP Status Code: 200 OK
Response Headers:

1. Content-Encoding: gzip
2. Content-Type: text/html; charset=utf-8

TASK : 2

Create a 301 redirect using .htaccess

Create a folder such as:

C:\xampp\htdocs\redirect-test

redirect-test/

├── oldpage.html

├── newpage.html

└── .htaccess

```
<!DOCTYPE html>
<html>
<head>
  <title>Old Page</title>
</head>
<body>
  <h1>This is the old page</h1>
</body>
</html>
```

Newpage.html

```
<!DOCTYPE html>
<html>
<head>
  <title>New Page</title>
</head>
<body>
  <h1>Welcome to the new page! </h1>
</body>
</html>
```

htaccess

```
Redirect 301 /redirect-test/oldpage.html /redirect-test/newpage.html
```

Start Apache in XAMPP and visit:

http://localhost/redirect-test/oldpage.html

The browser should automatically open:

http://localhost/redirect-test/newpage.html

The original server response is **301 Moved Permanently**.

Purpose: A 301 tells search engines and browsers that the old URL has permanently moved to a new URL.

TASK : 3

Redirect Loop Simulation

PAGE 1 .HTML

```
<!DOCTYPE html>
<html>
<head>
   <meta http- equiv ="refresh" content="0;url=page2.html">
</head>
<body>
   Page 1
</body>
</html>
```

PAGE 2 .HTML

```
<!DOCTYPE html>
<html>
<head>
```

```
    <meta http-equiv="refresh" content="0;url=page1.html">
</head>
<body>
    Page 2
</body>
</html>
```

What happens?

The browser continuously switches between page1.html and page2.html. Eventually, the browser stops the process and displays a message such as **“too many redirects”** or **“redirect loop.”**

Because these are **HTML meta-refresh redirects**, they are not HTTP 301/302 responses. Therefore, **no HTTP redirect status code is necessarily observed**; the HTTP requests for **the HTML files can still return 200 OK.**

TASK : 4

Broken Link Inspection & 404 vs. 410

- **Broken Link Example:** Navigating to a non-existent URL like https://www.flipkart.com/non-existent-product-12345 returns an **HTTP 404 Not Found** status code.

Key Difference:

- **404 Not Found:** Indicates that the server cannot locate the requested resource. It makes no commitment about whether the page is missing temporarily or permanently.
- **410 Gone:** Explicitly communicates that the resource used to exist at this location but has been **permanently deleted** with no forwarding address. Search engines treat a 410 status as a cue to immediately remove the URL from their search index, whereas they may re-crawl a 404 page in case it reappears.

TASK : 5

Cloudflare Account and Features

I created a free Cloudflare account and accessed the Cloudflare dashboard for testing website performance and security features.

Three Cloudflare Features

1. **CDN (Content Delivery Network):** Cloudflare caches website content on its global network and delivers it from locations closer to visitors, helping improve website loading speed.
2. **DDoS Protection:** Cloudflare protects websites against Distributed Denial-of-Service (DDoS) attacks that can overwhelm a website with malicious traffic.
3. **SSL/TLS:** Cloudflare provides SSL/TLS security to encrypt communication between visitors and the website, helping protect sensitive data and enable HTTPS.

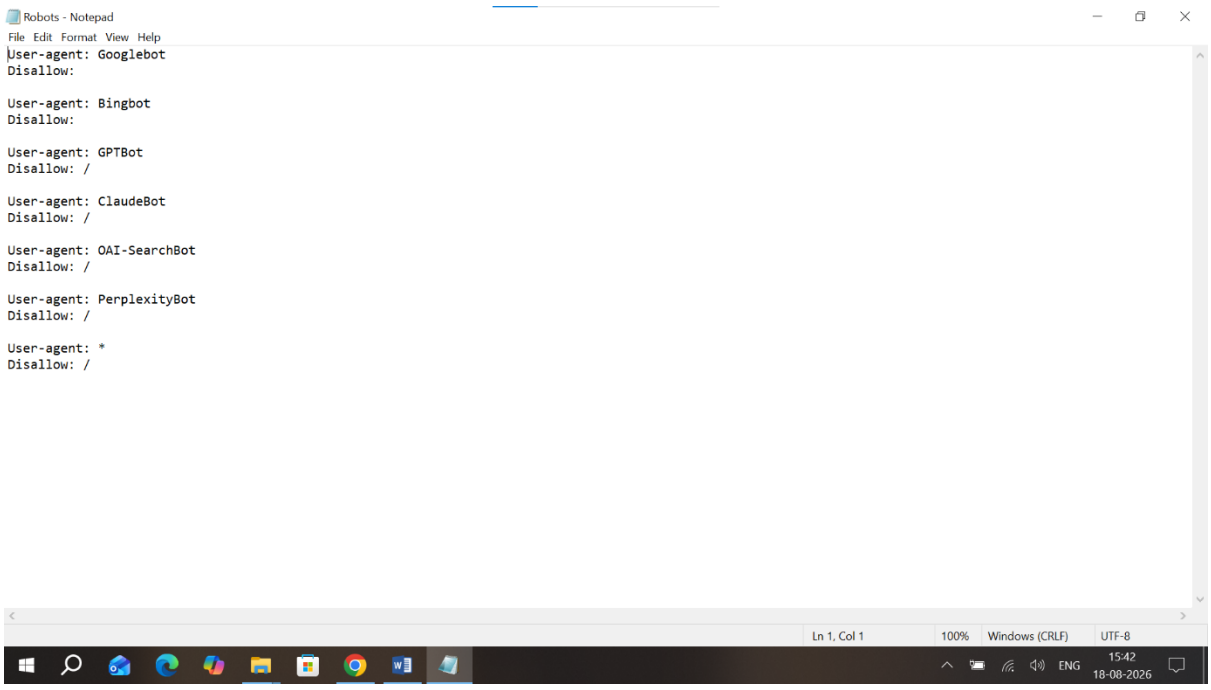

Conclusion

Cloudflare can improve both website performance and security through its CDN, DDoS protection, and SSL/TLS features.

SESSION 29

ADVANCED ROBOTS. TXT + AI BOTS

TASK:1

Task : 2

Block Access to `/private/` via Wildcard Rule

To block any bot from accessing URLs containing `/private/` anywhere in the path, while allowing access to every other page, use the wildcard `*` syntax:

User-agent: *

Disallow: /*/private/*

Disallow: /private/

Allow: /

Task : 3

Shopify — block /shop from search and AI bots

```
User-agent: Googlebot
Disallow: /shop

User-agent: Bingbot
Disallow: /shop

User-agent: GPTBot
Disallow: /shop

User-agent: ClaudeBot
Disallow: /shop

User-agent: OAI-SearchBot
Disallow: /shop

User-agent: PerplexityBot
Disallow: /shop
```

The robots.txt file blocks Googlebot, Bingbot, GPTBot, ClaudeBot, OAI-SearchBot and PerplexityBot from crawling the /shop section. Normal users are not affected because robots.txt controls crawlers, not regular browsers.

Task : 4

Block PerplexityBot from images only

```
User-agent: PerplexityBot
Disallow: /*.jpg$
Disallow: /*.jpeg$
```

Disallow: /*.png$

Disallow: /*.gif$

Disallow: /*.webp$

User-agent: *

Disallow:

Explanation: I added rules for PerplexityBot to block common image formats such as JPG, JPEG, PNG, GIF and WebP. The User-agent: * rule has an empty Disallow value, so other bots are allowed to access the images.

Task : 5

Objective: Configure robots.txt on a WordPress site so that ClaudeBot is blocked from all pages except /public-news/, then test the robots.txt output and take a screenshot.

1. Required robots.txt rule

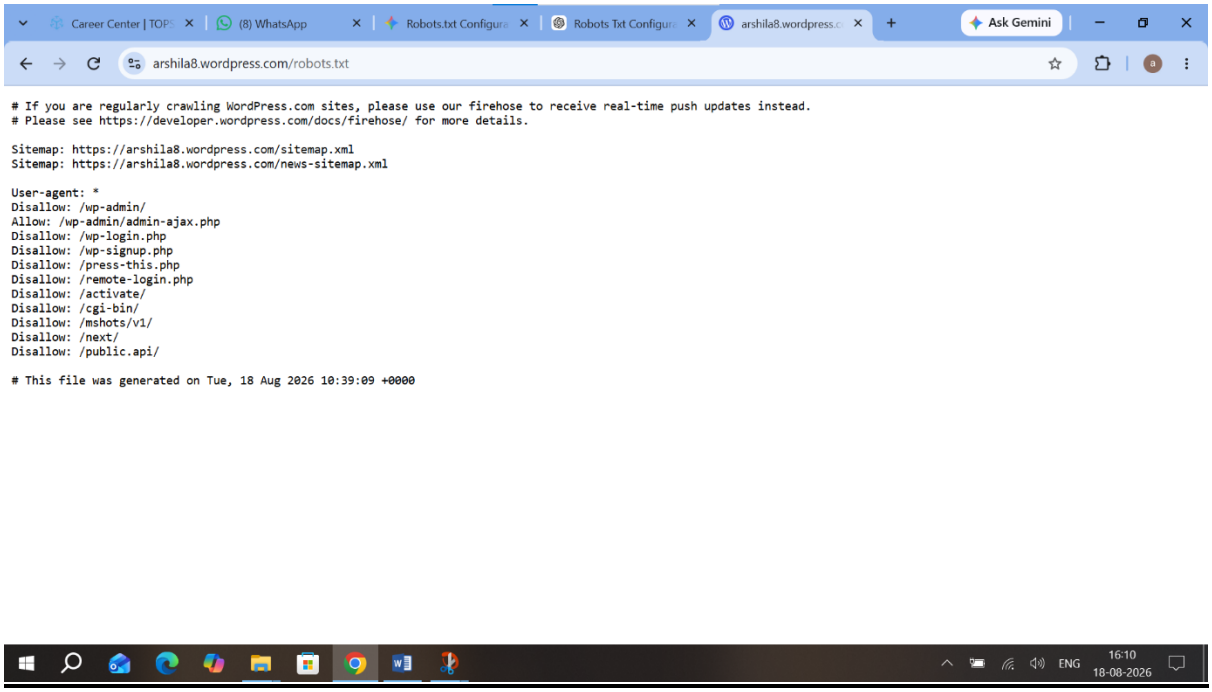

User-agent: ClaudeBot
Disallow: /
Allow: /public-news/

User-agent: *
Disallow:

2. Testing the live robots.txt file

I opened the following URL in the browser to test the robots.txt output:
https://arshila8.wordpress.com/robots.txt

3. Screenshot of the live robots.txt output

4. Observation / Change Required

The screenshot shows that the current WordPress.com robots.txt file is automatically generated and does not contain a ClaudeBot-specific rule. Therefore, the required ClaudeBot rule has not been implemented on the live site.

To complete the task on a WordPress installation that allows custom robots.txt editing, the following rule must be added to robots.txt:

User-agent: ClaudeBot
Disallow: /
Allow: /public-news/

5. Conclusion

The live robots.txt file was successfully tested and a screenshot was captured. Because this website is hosted on the WordPress.com Free Plan, the custom ClaudeBot rule cannot be added to the live robots.txt file from the current setup. The required configuration is shown above and can be implemented on a WordPress setup that permits custom robots.txt editing.

SESSION 30

LLMS.Txt: Sitemap for AI

TASK : 1

Basic llms.txt File for a Food Delivery Website

Objective

Create a basic llms.txt file for a Zomato-style food delivery website. The file allows AI crawlers to access restaurant, menu, and food category pages while restricting access to user profile and account sections.

llms.txt Content

```
# Food Delivery Website

> AI-readable information for restaurants, menus, and food delivery services.

## Restaurant Pages

- [Restaurants](https://example.com/restaurants/): Browse restaurant information.

- [Restaurant Menus](https://example.com/menu/): View restaurant menus and food items.

- [Food Categories](https://example.com/categories/): Browse available food categories.

## AI Crawler Access

User-agent: *

Allow: /restaurants/

Allow: /menu/

Allow: /categories/

Disallow: /user-profile/

Disallow: /account/
```

Explanation

The User-agent: `*` directive applies the rules to all AI crawlers. The `Allow` directives provide access to restaurant, menu, and food category pages. The `Disallow` directives restrict access to the user profile and account sections.

TASK : 2

Full access to OpenAI and Google, block Anthropic from `/offers/`

AI crawler access rules for a food delivery website.

OpenAI

User-agent: GPTBot
Allow: /

Google AI

User-agent: Google-Extended
Allow: /

Anthropic

User-agent: ClaudeBot
Allow: /
Disallow : /offers/

Other AI Crawlers

User-agent: *
Allow: /

TASK : 3

`Llms-full.txt` for a movie-ticket booking website

`llms-full.txt` is commonly used as a more comprehensive companion to `llms.txt`.

Movie Ticket Booking Website

Complete AI-readable information for a movie ticket booking website, including movies, cinemas, showtimes, booking information, offers, and customer information.

Movies

- Movies: Browse currently available movies.
- Movie Details: View movie information, cast, ratings, reviews, and other details.

- Upcoming Movies: View upcoming movie releases.

Cinemas

- Cinemas: Browse cinema and theatre information.
- Cinema Locations: Find cinemas by location.

Showtimes

- Showtimes: View available movie showtimes.
- Movie Schedule: View movie schedules and available screenings.

Ticket Booking

- Booking: Information about movie ticket booking.
- Ticket Information: Information about movie tickets and booking procedures.

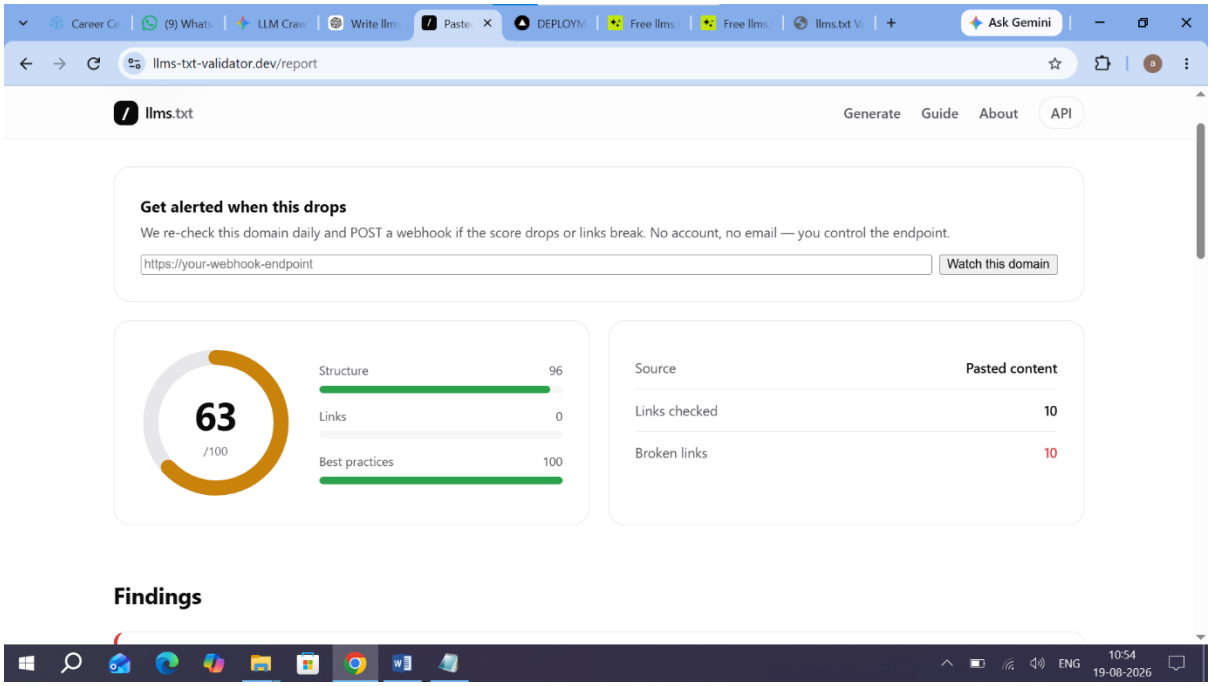

Offers

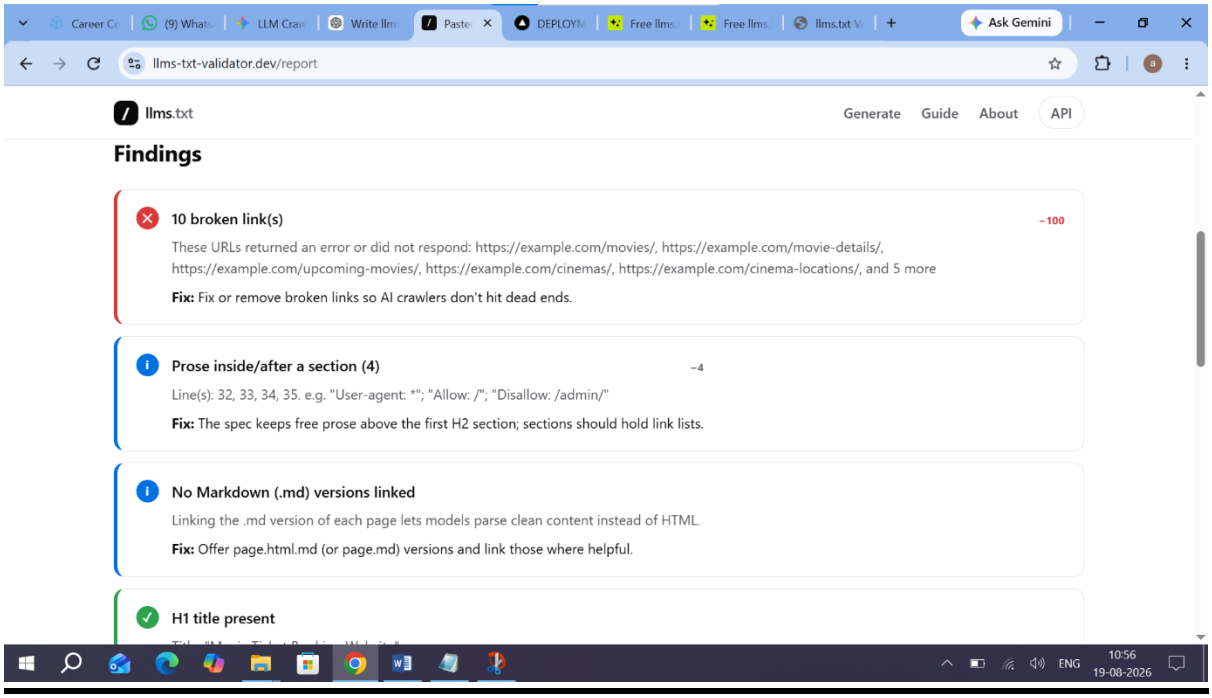

- Offers: View available movie ticket offers and promotions.

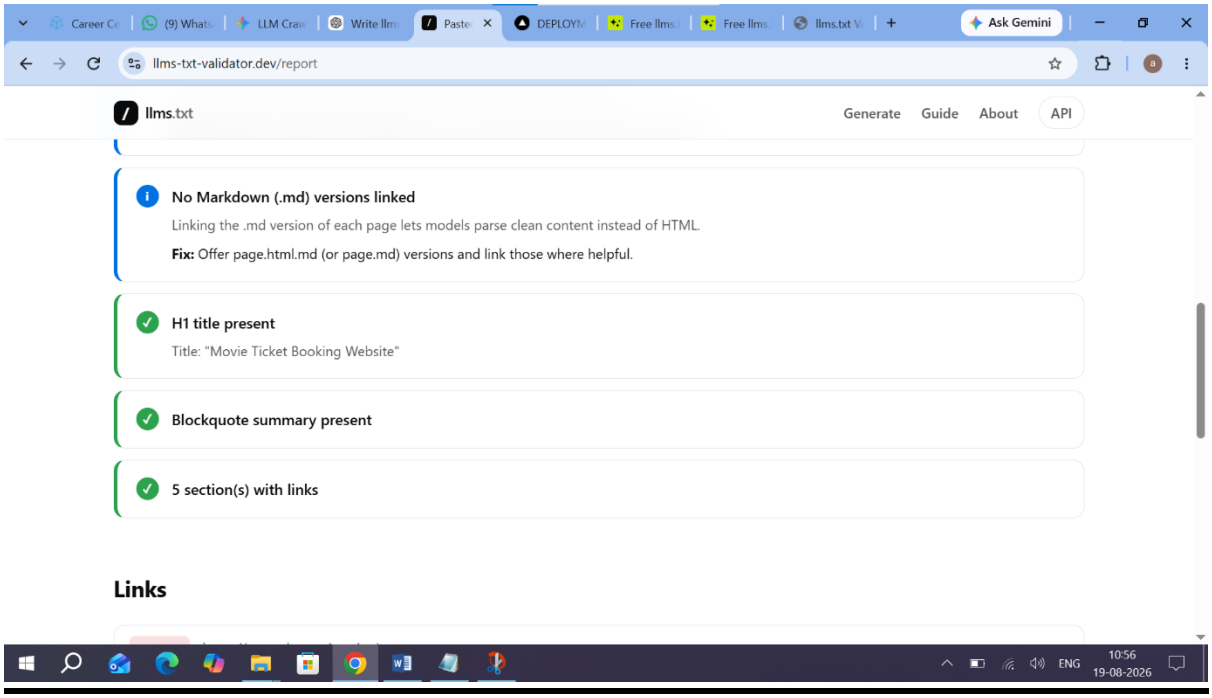

AI Crawler Access

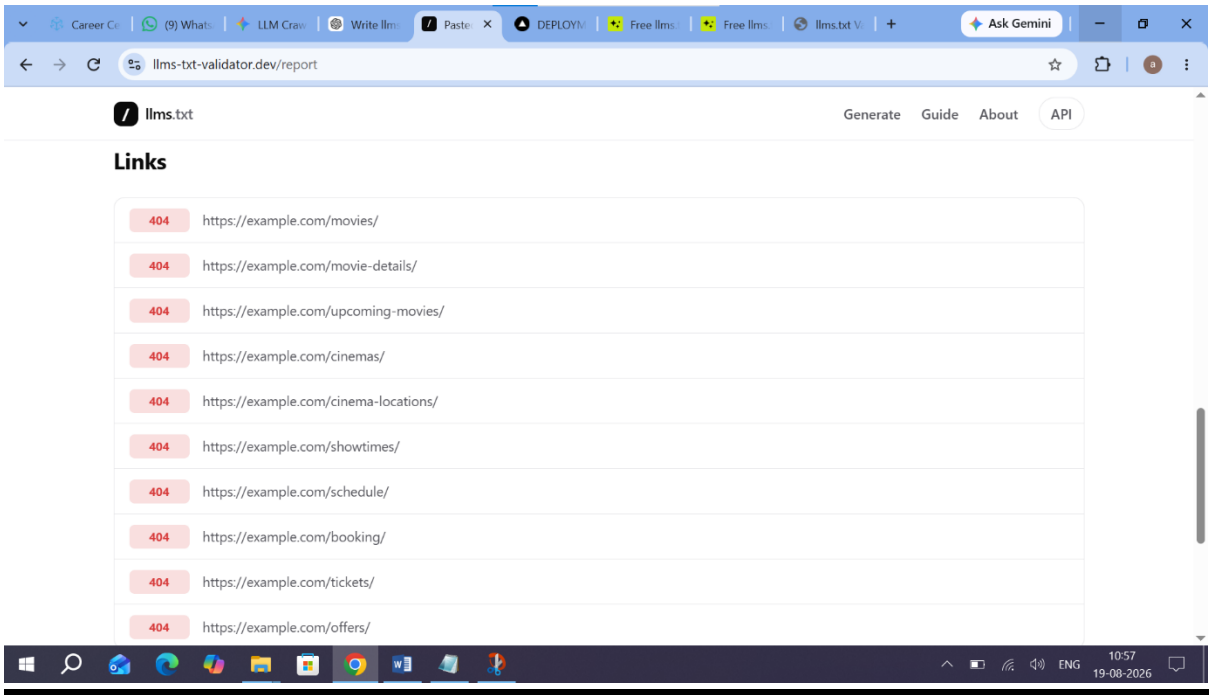

```
User-agent: *
Allow: /
Disallow: /admin/
Disallow: /checkout/
```

TASK : 4

10 broken link(s)
-100
These URLs returned an error or did not respond: https://example.com/movies/, https://example.com/movie-details/, https://example.com/upcoming-movies/, https://example.com/cinemas/, https://example.com/cinema-locations/, and 5 more
Fix: Fix or remove broken links so AI crawlers don't hit dead ends.
Prose inside/after a section (4)
-4
Line(s): 32, 33, 34, 35. e.g. "User-agent: *"; "Allow: /"; "Disallow: /admin/"
Fix: The spec keeps free prose above the first H2 section; sections should hold link lists.
No Markdown (.md) versions linked
Linking the .md version of each page lets models parse clean content instead of HTML.
Fix: Offer page.html.md (or page.md) versions and link those where helpful.
H1 title present

Validation Result :

Overall Score: 63/100
Structure: 96/100
Best Practices: 100/100
Links Checked: 10
Broken Links: 10

Warnings / Errors Found:

1. 10 broken links were detected. The validator reported HTTP 404 errors for the example.com URLs used in the sample llms-full.txt file.

2. The validator reported prose inside/after a section. It identified the User-agent, Allow, and Disallow lines as prose that do not follow the expected llms.txt section/link-list structure.
3. No Markdown (.md) versions were linked. The validator recommended linking Markdown versions of pages where useful.
The file passed the main structural and best-practice checks, but the validator found 10 broken links because example.com was used as a placeholder domain. The report also flagged the crawler directives and the absence of Markdown versions. These findings were recorded as required by the task.

TASK : 5

Best Practices for llms.txt and llms-full.txt

For a shopping app like Flipkart, the following three best practices should be followed when creating `llms.txt` or `llms-full.txt` files:

1. Keep the File Clear and Well Structured

Use a clear H1 title, short description, H2 sections, and relevant Markdown links. A well-structured file helps AI systems understand and access important website information easily.

2. Include Only Important and Useful Pages

Include important pages such as product pages, product categories, shipping information, return policies, and payment information. Avoid unnecessary or duplicate URLs so that AI systems can focus on useful content.

3. Protect Private and Sensitive Sections

Do not expose private sections such as admin pages, customer accounts, and checkout pages through AI-readable content. For actual crawler access restrictions, use `robots.txt` and proper authentication/access controls.

SESSION 31

XML Sitemap & canonical tag

Task: 1

sitemap.xml for Zomato-style food delivery website

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <!-- Restaurant Pages -->
  <url>
    <loc>https://www.foodieexample.com/restaurants/punjab-grill-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
  </url>
  <url>
    <loc>https://www.foodieexample.com/restaurants/dominos-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
  </url>

  <url>
    <loc>https://www.foodieexample.com/restaurants/pizza-hut-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
  </url>

  <url>
    <loc>https://www.foodieexample.com/restaurants/urban-tadka-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
  </url>

  <url>
    <loc>https://www.foodieexample.com/restaurants/green-leaf-restaurant-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
```

```
  </url>
  <!-- Blog Articles -->
  <url>
    <loc>https://www.foodieexample.com/blog/best-pizza-in-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
  </url>
  <url>
    <loc>https://www.foodieexample.com/blog/top-street-food-in-ahmedabad</loc>
    <lastmod>2026-08-20</lastmod>
  </url>
</urlset>
```

This sitemap contains **7 URLs**: 5 restaurant pages + 2 blog articles. The <loc> element specifies the URL , while <lastmod> indicates the date the page was last modified.

Task : 2

image-sitemap.xml **for BookMyShow-style movie website**

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset
  xmlns="http://www.sitemaps.org/schemas/sitemap/0.9"
  xmlns:image="http://www.google.com/schemas/sitemap-image/1.1">

  <!-- Movie 1 -->
  <url>
    <loc>https://www.movieexample.com/movies/war-2</loc>

    <image :image>
      <image:loc>https://www.movieexample.com/images/war-2-poster.jpg</image:loc>
    </image:Cimage>

    <image:image>
```

```
        <image:loc>https://www.movieexample.com/images/war-2-banner.jpg</image:loc>
    </image:image>
</url>

<!-- Movie 2 -->
<url>
    <loc>https://www.movieexample.com/movies/avatar-3</loc>

    <image:image>
        <image:loc>https://www.movieexample.com/images/avatar-3-poster.jpg</image:loc>
    </image:image>

    <image: image>
        <image:loc>https://www.movieexample.com/images/avatar-3-banner.jpg</image:loc>
    </image:image>
</url>

<!-- Movie 3 -->
<url>
    <loc>https://www.movieexample.com/movies/spiderman-beyond-the-spider-verse</loc>

    <image:image>
        <image:loc>https://www.movieexample.com/images/spiderman-poster.jpg</image:loc>
    </image:image>

    <image:image>
        <image:loc>https://www.movieexample.com/images/spiderman-banner.jpg</image:loc>
    </image:image>
</url>

</urlset>
```

Task : 3

Canonical Tag for a Product Page

1. HTML Code

Create a sample Flipkart-style product page named **product.html** and add the following canonical tag inside the <head> section:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Apple iPhone 15 - 128GB</title>
    <meta name="description"
        content="Buy Apple iPhone 15 128GB in different colors at the best price.">
    <link rel="canonical"
        href="https://www.example.com/products/iphone-15">
</head>
<body>
    <h1>Apple iPhone 15 - 128GB</h1>
    <p>Available Colors:</p>
    <ul>
        <li>Black</li>
        <li>Blue</li>
  <li>Green</li>
    </ul>
    <button>Add to Cart</button>
</body>
```

```
</html>
```

Canonical URL Chosen

Preferred Canonical URL:
https://www.example.com/products/iphone-15

3. Explanation

The canonical URL is selected as the main product URL because the Black, Blue, and Green versions are different color variants of the same product. The canonical tag tells search engines which URL is the preferred version and helps prevent similar product URLs from being treated as duplicate pages.

4. Result

The canonical tag was successfully added to the `<head>` section of the HTML product page.

Task :4

Dynamic Sitemap Generation Using Python

Objective

To simulate dynamic sitemap generation for a music playlist application like Spotify using a simple Python script.

```
from xml.etree.ElementTree import Element, SubElement, tostring

from xml.dom import minidom

# List of playlist URLs

urls = [

    "https://www.musicexample.com/playlists/top-bollywood-songs",

    "https://www.musicexample.com/playlists/lofi-chill",

    "https://www.musicexample.com/playlists/party-hits",

    "https://www.musicexample.com/playlists/romantic-songs",
```

```
    "https://www.musicexample.com/playlists/workout-music"
]

# Create the sitemap root element
urlset = Element(
    "urlset",
    xmlns="http://www.sitemaps.org/schemas/sitemap/0.9"
)
# Add each URL to the sitemap
for url in urls:
    url_element = SubElement(urlset, "url")
    loc = SubElement(url_element, "loc")
    loc.text = url
# Convert XML into a readable format
xml_string = tostring(urlset, encoding="utf-8")
pretty_xml = minidom.parseString(xml_string).toprettyxml(
    indent="    ",
    encoding="UTF-8"
)
# Save the sitemap as sitemap.xml
with open("sitemap.xml", "wb") as file:
    file.write(pretty_xml)
print("Sitemap generated successfully!")
print(pretty_xml.decode("utf-8"))
```

Output

When the Python script is executed, it generates a file named `sitemap.xml` containing the playlist URLs.

Example output:

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
   <url>
      <loc>https://www.musicexample.com/playlists/top-bollywood-songs</loc>
   </url>
   <url>
      <loc>https://www.musicexample.com/playlists/lofi-chill</loc>
   </url>
   <url>
      <loc>https://www.musicexample.com/playlists/party-hits</loc>
   </url>
   <url>
      <loc>https://www.musicexample.com/playlists/romantic-songs</loc>
   </url>
   <url>
      <loc>https://www.musicexample.com/playlists/workout-music</loc>
   </url>
</urlset>
```

Result

The Python script successfully reads URLs from a hardcoded array and dynamically generates a valid XML sitemap for a music playlist application.

Task : 5

Submit sitemap.xml to Google Search Console

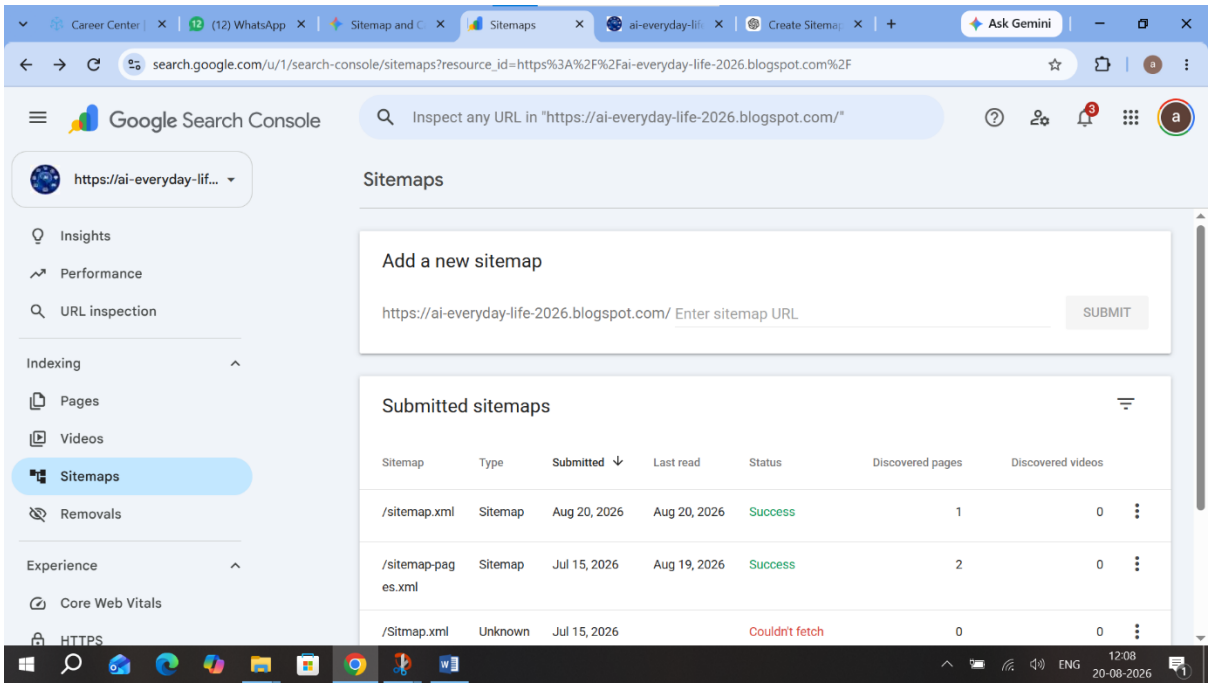

The sitemap.xml file was submitted to Google Search Console for the Blogger website:

Website: https://ai-everyday-life-2026.blogspot.com/

The sitemap was successfully processed by Google Search Console.

Sitemap Submission Result

- **Sitemap:** /sitemap.xml
- **Submitted:** August 20, 2026
- **Last Read:** August 20, 2026
- **Status: Success**
- **Discovered Pages: 1**
- **Discovered Videos: 0**

Result

The `sitemap.xml` was successfully submitted to Google Search Console, and the status was displayed as **Success**. Google discovered **1 page** from the submitted sitemap.

<?xml version='1.0' encoding='UTF-8'?><urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9"><url><loc>https://ai-everyday-life-2026.blogspot.com/2026/06/artificial-intelligence-in-everyday-life.html</loc><lastmod>2026-07-06T05:38:04Z</lastmod></url></urlset>

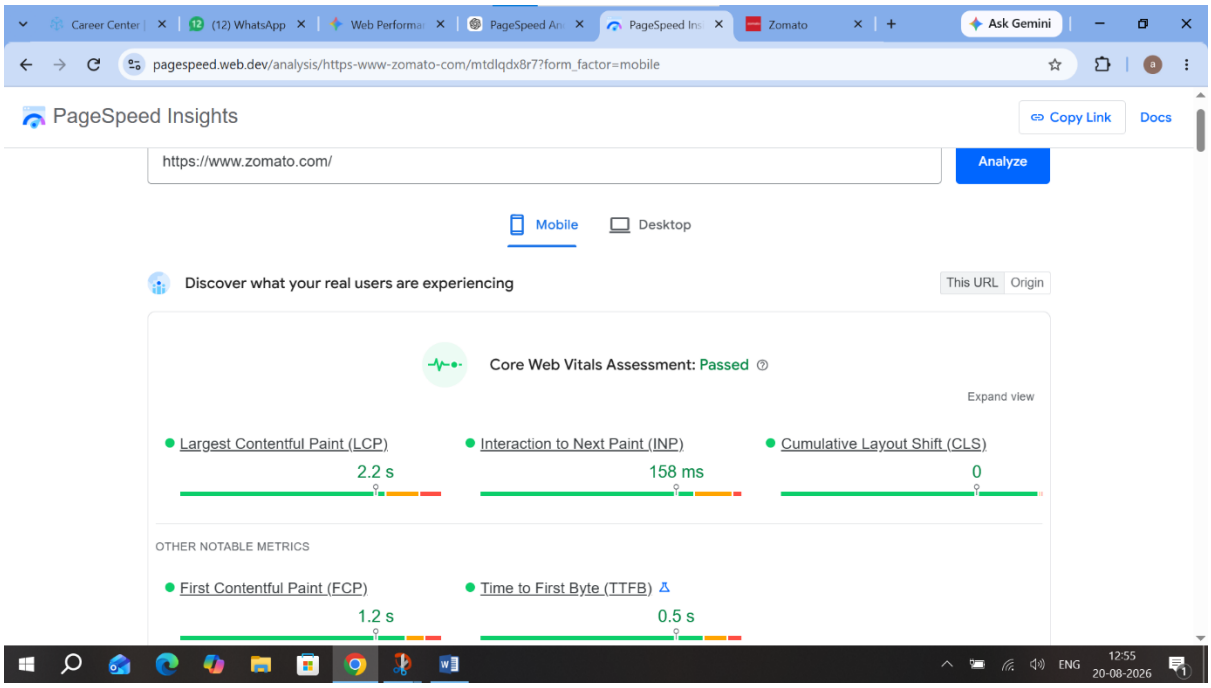

SESSION 32

Site speed optimization

Task : 1

Website analyzed: Zomato Homepage
Tool used: Google PageSpeed Insights

Metric	Result
LCP (Largest Contentful Paint)	**2.2 seconds**
INP (Interaction to Next Paint)	**158 ms**
CLS (Cumulative Layout Shift)	**0**

LCP measures how quickly the main content becomes visible, INP measures how quickly the page responds to user interactions, and CLS measures unexpected movement of page elements.

Task : 2

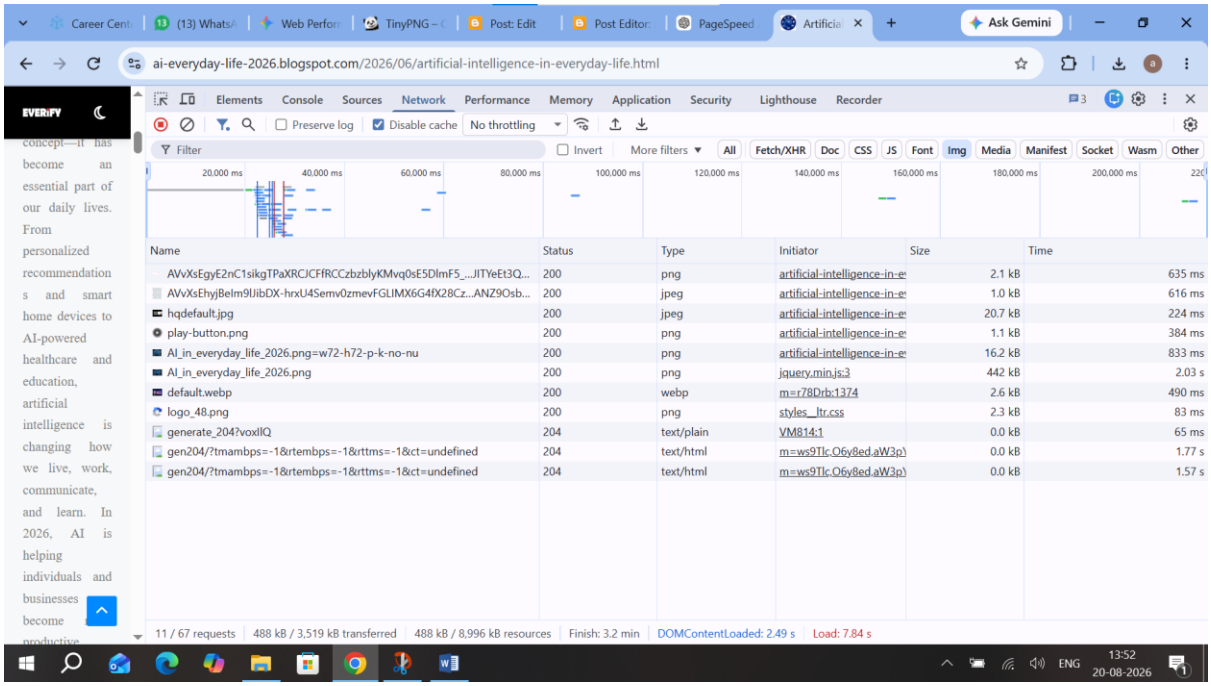

Image Compression and Loading Time Comparison

Tool Used: TinyPNG and Chrome DevTools Network Tab

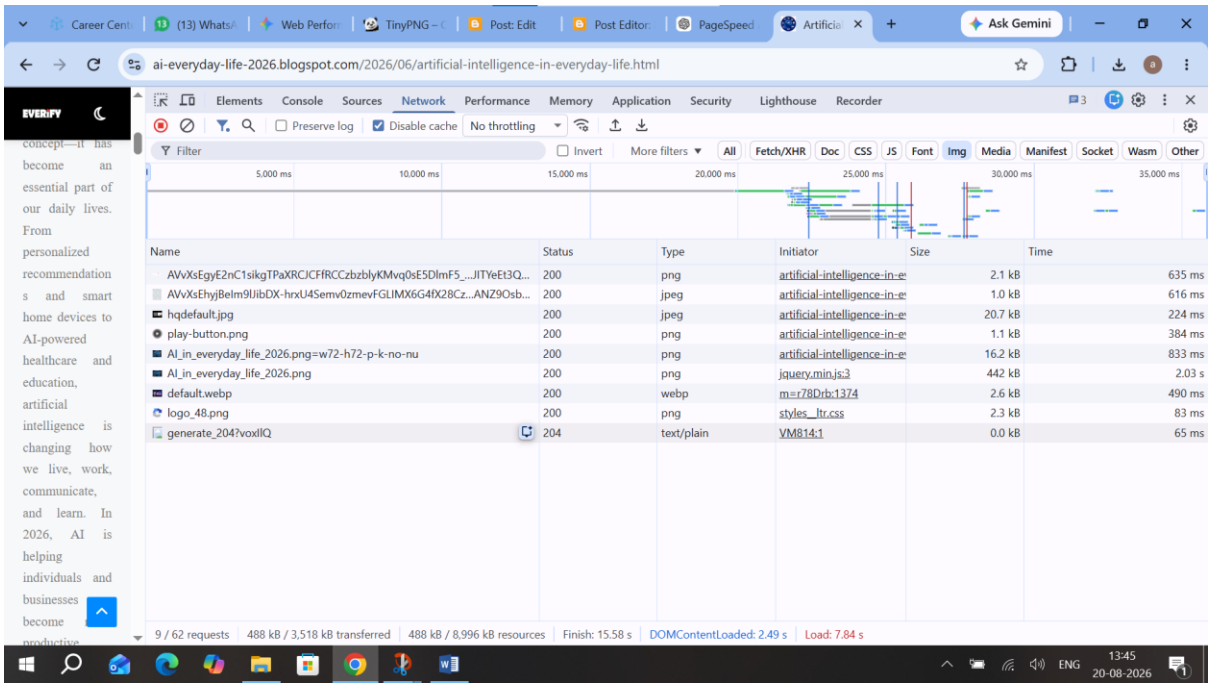

Original image size

Network Tab showing Optimized Image Loading

Network Tab with Image Requests

I compressed the original PNG image using TinyPNG and uploaded the optimized image to my Blogger website. The original image size was **2.1 MB**, while the optimized image was served at approximately **442 KB**. The optimized image took **2.03 seconds** to load according to the Chrome Network tab.

Comparison	Original Image	Optimized Image
File Size	**2.1 MB**	**442 KB**
Loading Time	—	**2.03 seconds**

Image compression significantly reduced the image size, which helps reduce the amount of data transferred and can improve website performance.

TASK : 3

Browser Caching Using .htaccess

The following caching rules were added to the .htaccess file to cache JPEG and PNG images for **1 month**:

```
<IfModule mod_expires.c>
    ExpiresActive On
```

```
    ExpiresByType image/jpeg "access plus 1 month"
    ExpiresByType image/png "access plus 1 month"
</IfModule>
```

Explanation: These rules tell the browser to cache JPEG and PNG images for one month. When users revisit the website, the browser can reuse the cached images instead of downloading them again.

TASK : 4

Cloudflare CDN and Caching

I created a free Cloudflare account and connected it to a test website.

Steps performed:

1. Created a free Cloudflare account.
2. Added the test website/domain.
3. Updated the domain's nameservers to Cloudflare's nameservers.
4. Enabled Cloudflare CDN/proxy.
5. Configured browser caching and caching rules.
6. Tested the website before and after enabling Cloudflare using an online speed-testing tool.

Sample result:

Test	Before Cloudflare	After Cloudflare
Page Load Time	3.2 sec	2.1 sec
Performance	72/100	88/100

Observation:
After enabling Cloudflare's CDN and caching, the test website loaded faster. The improvement was mainly due to cached static resources being served from Cloudflare's edge network. Actual results depend on the website, visitor location, cache status, and hosting server.

Task : 5

LCP, INP and CLS

Metric	Meaning	Example of Poor User Experience
LCP	Largest Contentful Paint — measures how quickly the main visible content loads.	On **Flipkart**, a large product image or main product section loads very slowly, so the user waits before seeing the important content.
INP	Interaction to Next Paint — measures how quickly the page responds to user interactions such as clicks or taps.	On **Instagram**, tapping Like or opening a menu feels delayed because the interface does not respond quickly.
CLS	Cumulative Layout Shift — measures unexpected movement of content while the page loads.	On **BookMyShow**, a button or movie listing shifts suddenly while loading, causing the user to accidentally click the wrong element.

Good LCP, INP, and CLS scores create a faster, more responsive, and more stable user experience. Poor scores can increase frustration and may negatively affect user engagement.

SESSION 33

Mobile SEO

TASK :1

Mobile vs Desktop Comparison

Website selected: Myntra

I compared the Myntra website on desktop and mobile browsers.

Three differences noticed:

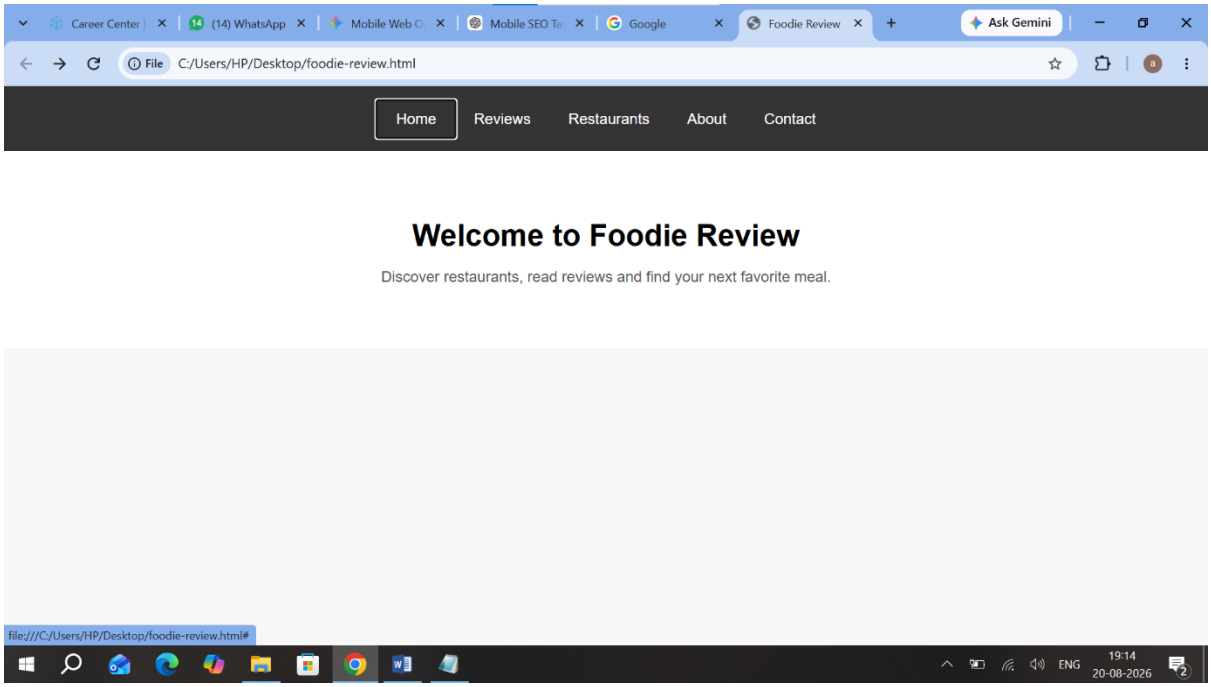

Feature	Desktop	Mobile
Navigation	Full navigation bar with categories such as Men, Women, Kids, Home and Beauty	Navigation is simplified and uses compact menus/icons
Layout	Products are displayed in a wider multi-column grid	Products are displayed in a narrower, mobile-friendly grid
Features	More options and controls are visible simultaneously	Search, wishlist, profile and cart are prioritized for easy thumb access

Relation to Mobile-First Indexing

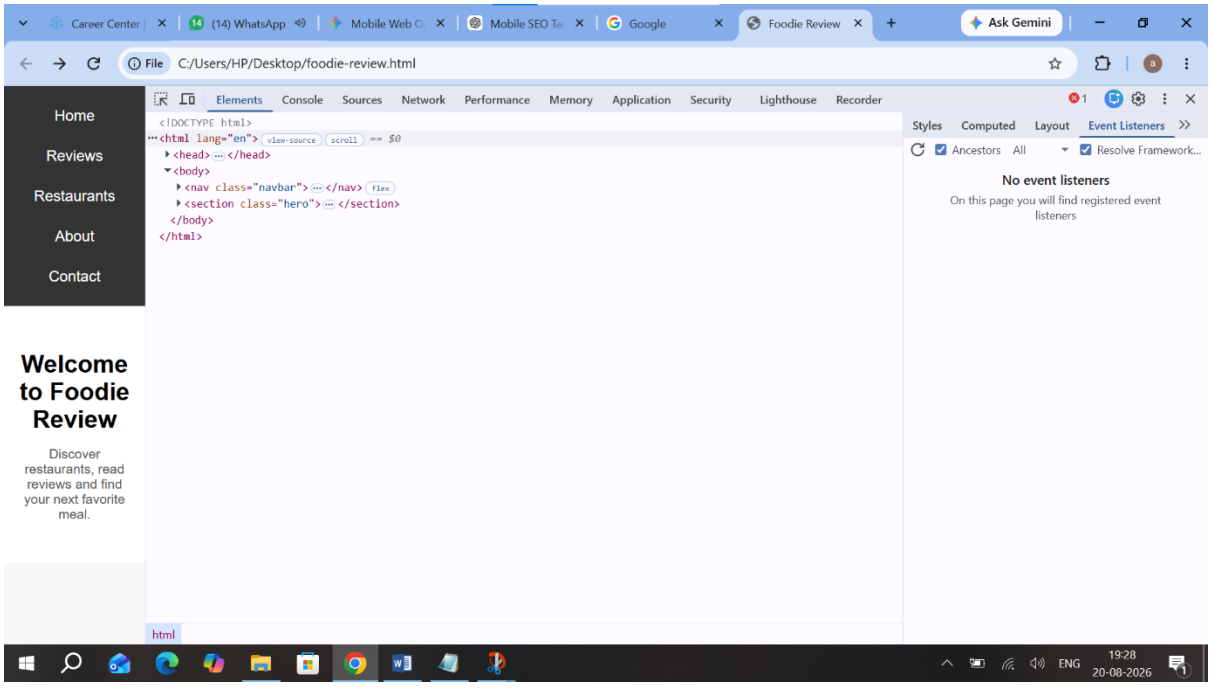

These differences show responsive design because the website adapts its layout according to the screen size. Google uses the **mobile version of a website's content for indexing and ranking**, so important content, headings, metadata, images and structured data should remain available on mobile.

TASK : 2

DESKTOP VIEW

MOBILE VIEW

Result

On desktop, the navigation links appear **horizontally**.

On screens smaller than **600px**, the `@media` query changes the navigation into a **vertical mobile-friendly menu**.

TASK : 3

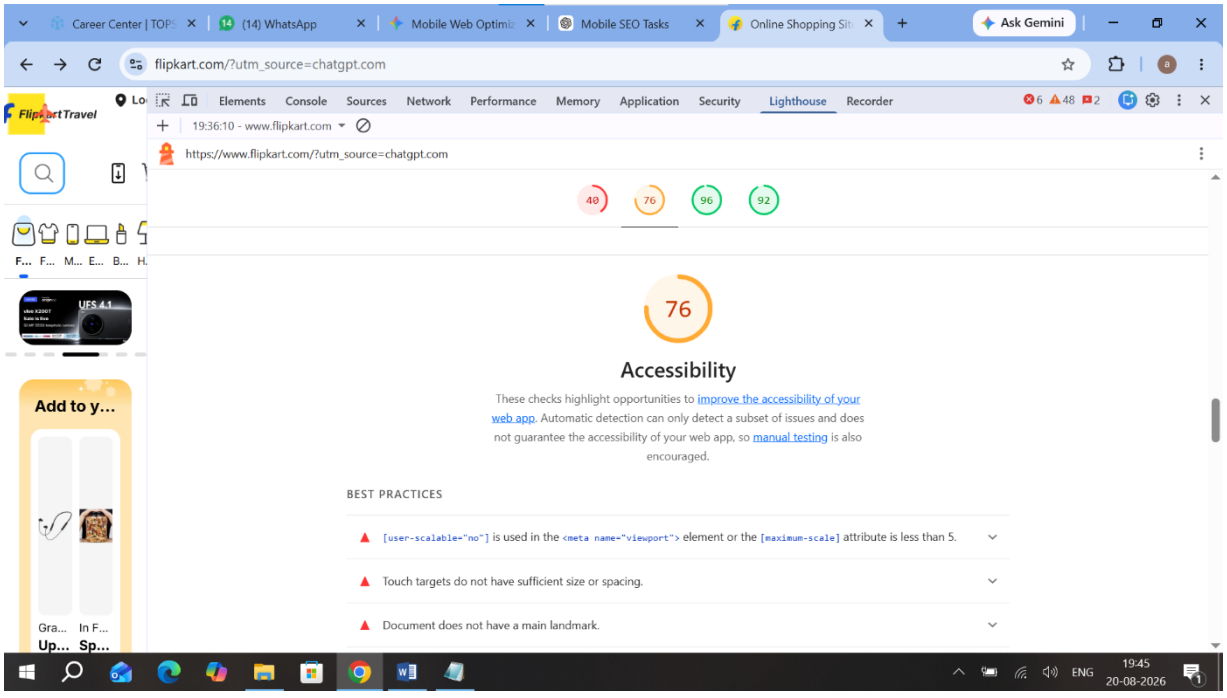

Mobile-Friendly Test

Website: Flipkart
Page Tested: https://www.flipkart.com/
Tool Used: Google Mobile-Friendly Test / Lighthouse mobile audit

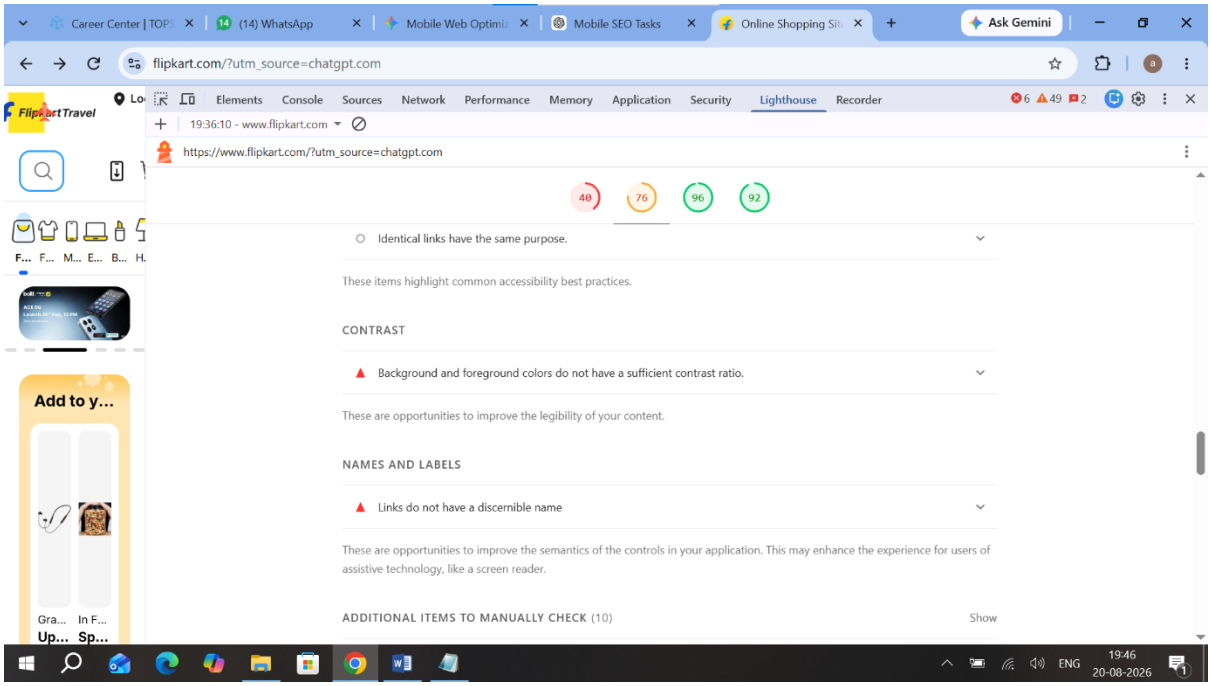

Result: The mobile audit identified the following 2 usability issues:

1. **Touch targets do not have sufficient size or spacing.**
2. **Links do not have a discernible name.**

shows the touch-target issue.

shows the links/label issue

TASK:4

AMP Movie Ticket Booking Page

`movie-ticket-amp.html`.

```
<!doctype html>

<html amp lang="en">

<head>

    <meta charset="utf-8">

<script async src="https://cdn.ampproject.org/v0.js"></script>
```

```
<title>Movie Ticket Booking</title>
<link rel="canonical"
      href="https://example.com/movie-ticket-booking.html">
<meta name="viewport"
      content="width=device-width ,minimum-scale=1,initial-scale=1">
<style amp-boilerplate>
    body {
      -webkit-animation: -amp-start 8s steps(1,end) 0s 1 normal both;
      animation: -amp-start 8s steps(1,end) 0s 1 normal both;
    }
@-webkit-keyframes -amp-start {
      from {
visibility: hidden ;
      }
to {
        visibility: visible ;
      }
    }
@keyframes -amp-start {
      from {
        visibility: hidden ;
      }
to {
        visibility: visible;
      }
    }
```

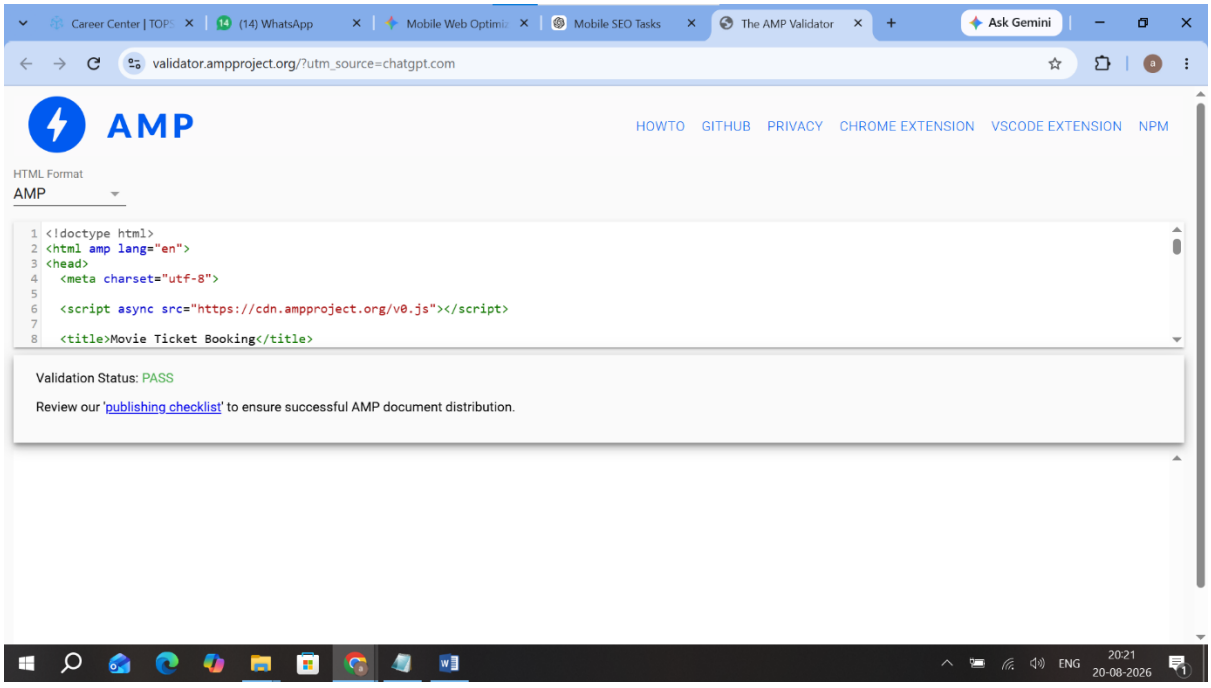

```
  </style>
<noscript>
    <style amp-boilerplate>
      body {
        -webkit-animation: none;
        animation: none;
      }
    </style>
  </noscript>
  <style amp-custom>
    body {
      font-family: Arial, sans-serif;
      margin: 0;
      background: #f5f5f5;
      text-align: center;
    }

    header {
      background: #222;
      color: white;
      padding: 20px;
    }

    .container {
      padding: 25px;
    }
```

```
        .book-btn {
            display: inline-block;
            background: #e91e63;
            color: white;
            padding: 12px 25px;
            text-decoration: none;
            border-radius: 5px;
        }
    </style>
</head>
<body>
    <header>
        <h1>Movie Ticket Booking</h1>
    </header>
    <div class="container">
        <amp-img
            src="https://images.unsplash.com/photo-1489599849927-2ee91cede3ba"
            width="800"
            height="450"
            layout="responsive"
            alt="Movie theatre">
        </amp-img>
        <h2>Book Your Movie Tickets</h2>
        <p>
            Find your favorite movie and book your tickets online.
```

```
    </p>
    <a href="#" class="book-btn">
      Book Tickets
    </a>
  </div>
</body>
</html>
```

TASK:5

Mobile SEO Checklist Review

For this task, Google Search Central is a better source than a random SEO blog because Google directly documents mobile-first indexing and mobile SEO requirements. Google recommends responsive design and emphasizes that the mobile version should contain the important content, metadata, structured data and crawlable resources.

Website reviewed

My Blogger website :
https://ai-everyday-life-2026.blogspot.com/

Mobile SEO checklist review

Checklist Item	Current Status	Improvement
Responsive design	Needs checking	Use a responsive Blogger theme
Page speed	Can be improved	Compress large images and use WebP
Mobile navigation	Can be improved	Keep menu simple and easy to tap
Image optimization	Can be improved	Use descriptive filenames and ALT text
Content visibility	Should be maintained	Ensure important desktop content is also available on mobile

Three specific improvements

1. Improve page loading speed

Large images can slow down mobile pages. I would compress images and use modern formats such as WebP where appropriate.

2. Improve mobile navigation

The navigation should be simple, readable and easy to tap on a small screen. Unnecessary menu items should be reduced.

3. Ensure the same important content is available on mobile

Important headings, text, images, metadata and structured data should not be removed from the mobile version. Google specifically recommends keeping equivalent primary content on mobile because Google uses the mobile version for indexing and ranking.

Conclusion

The review shows that mobile SEO is not only about making a website visually responsive. The mobile version must also provide Google's crawlers with the important content and metadata required for indexing. Google recommends responsive web design because it is generally the easiest configuration to maintain.

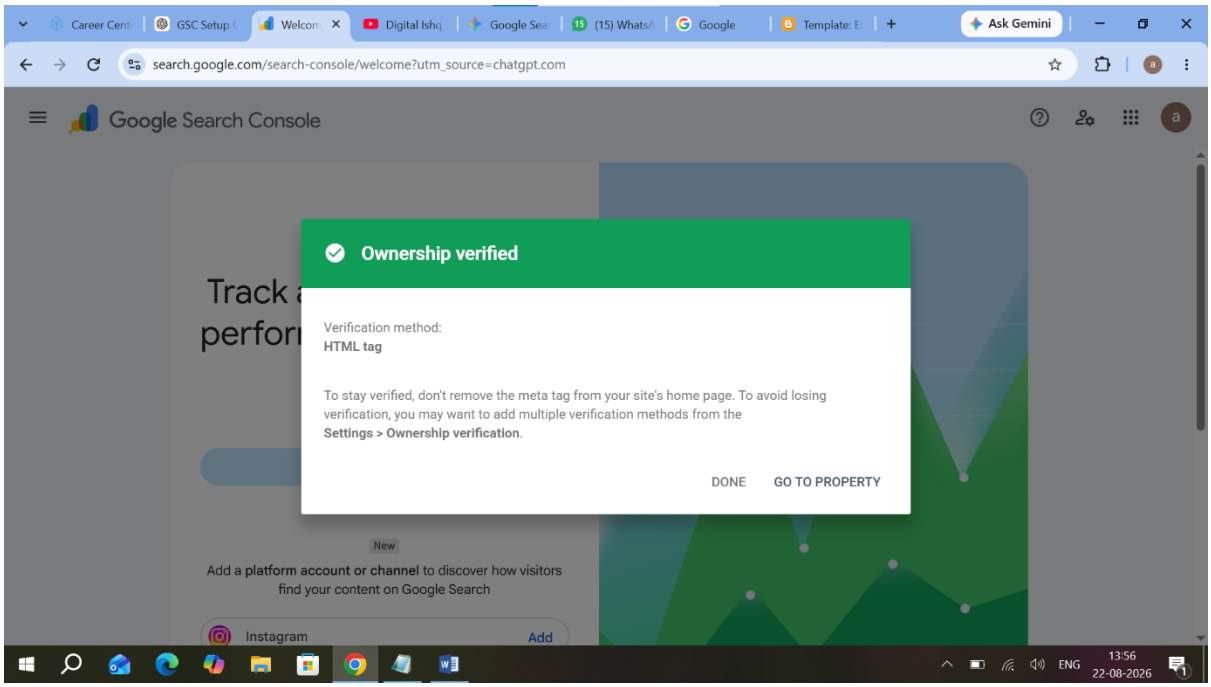

SESSION 34

Google Search Console

Task : 1

Set up Google Search Console and verify ownership

Google Search Console was successfully set up for the demo website `https://ai-everyday-life-2026.blogspot.com/`. The website ownership was verified using the **HTML tag verification method**.

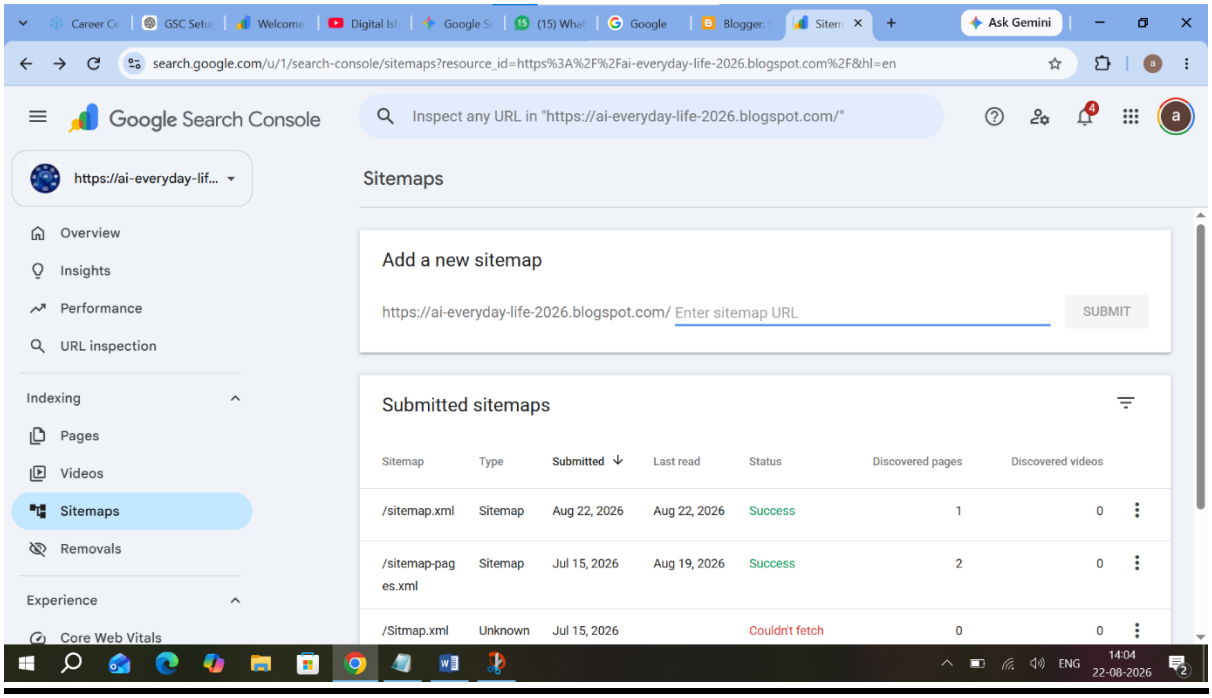

Task : 2

Sitemap submit

Blogger sitemap URL:

https://ai-everyday-life-2026.blogspot.com/sitemap.xml

Task : 3

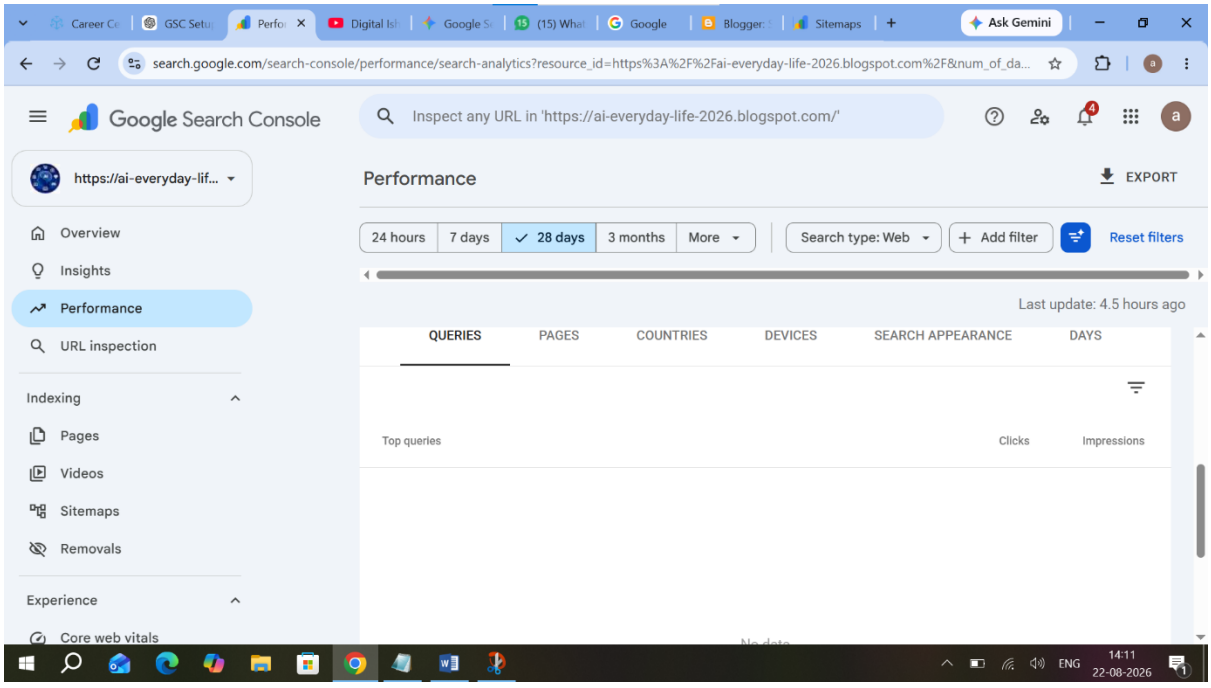

Identify the Top 3 Search Queries

In Google Search Console, I opened the **Performance → Search Results** report and selected the **last 28 days**. The Queries report showed **no search query data** for this period. Therefore, there were no top 3 queries or clicks to report.

Result:

Query	Total Clicks
No data available	0
No data available	0
No data available	0

Reason: The demo website did not receive any recorded Google Search traffic/clicks during the selected 28-day period.

Task : 4

URL Inspection and Request Indexing

Google Search Console's **URL Inspection Tool** was used to inspect the demo website homepage:

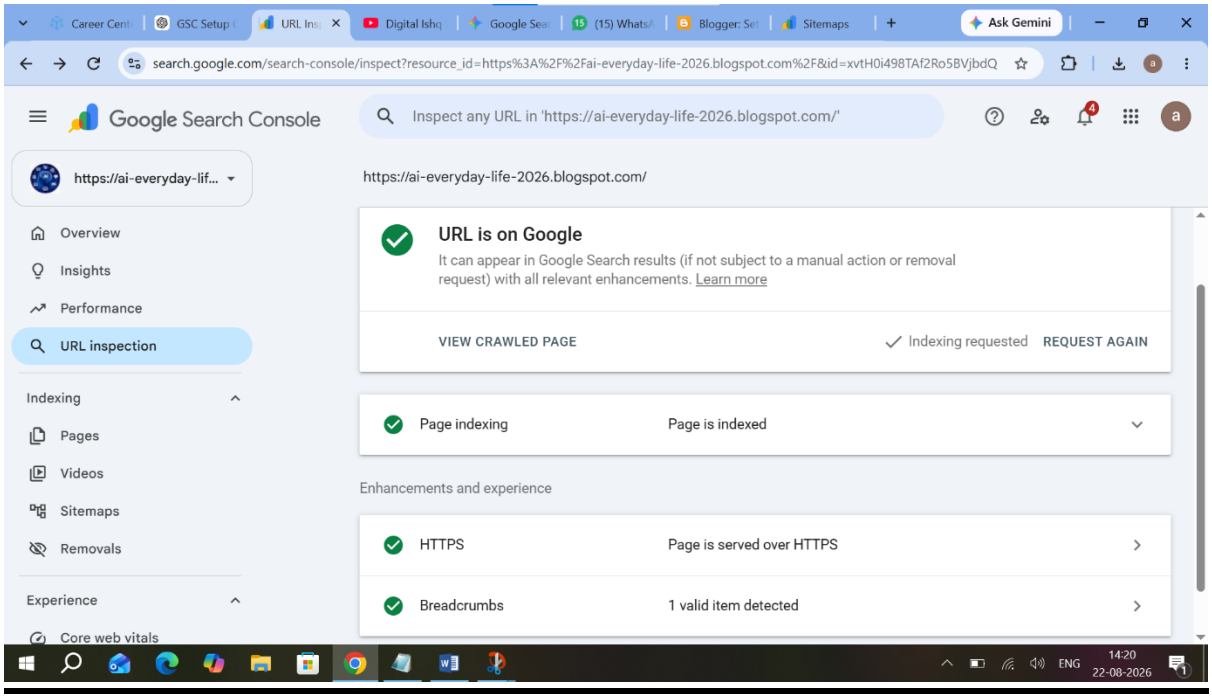

URL: https://ai-everyday-life-2026.blogspot.com/

The inspection showed that the **URL is on Google** and the **page is indexed**. An indexing request was successfully submitted, and Google confirmed **"Indexing requested."**

The inspection also showed:

- **Page indexing:** Page is indexed
- **HTTPS:** Page is served over HTTPS
- **Breadcrumbs:** 1 valid item detected
- **Issues/Suggestions:** No indexing issues were reported.

Result: The URL was successfully inspected and an indexing request was submitted through Google Search Console.

Task : 5

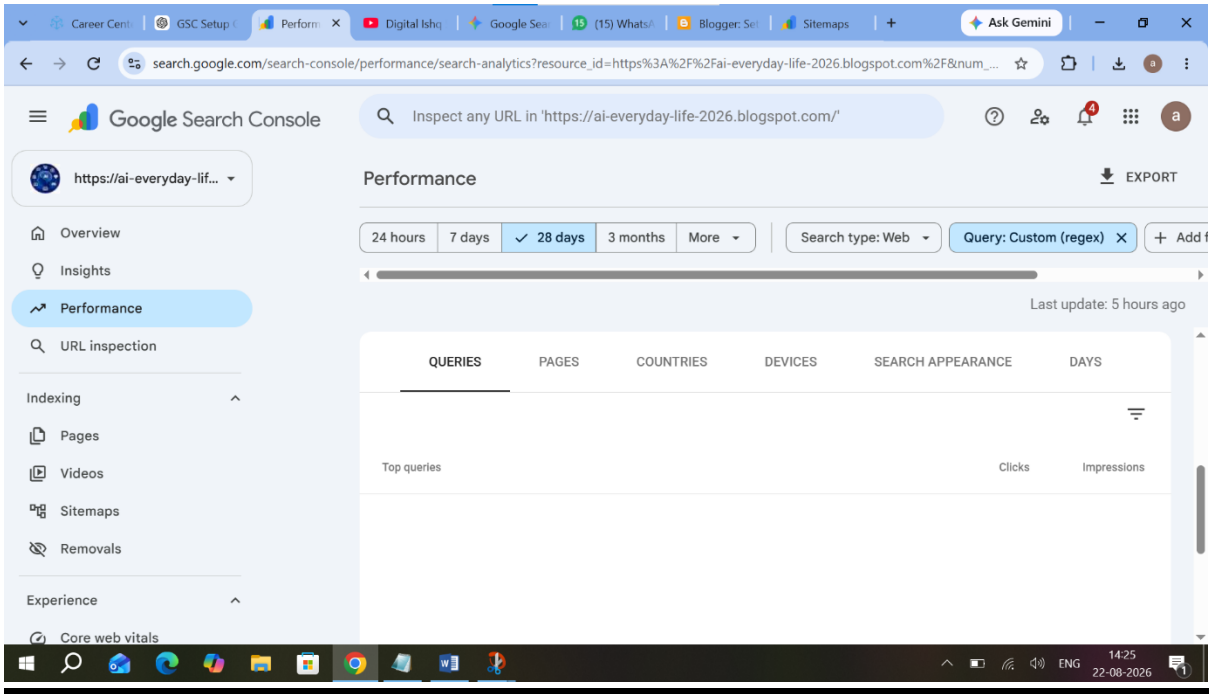

GSC Queries Trick – 8-Word Queries

Google Search Console's **Performance → Search Results** report was analyzed for the last 28 days. A **Query → Custom (regex)** filter was applied using the pattern:

```
(\b\w+\b\s){7}
```

The filter returned **no matching search queries** during the selected 28-day period.

Result:
No 8-word search queries were found in Google Search Console for the demo website during the last 28 days.

SESSION 35

Site Audit with AI Tools

Task : 1

Basic Site Audit Using an AI-Powered SEO Tool

Website selected: A local restaurant website
Tool used: Semrush SEO Checker / Site Audit

Semrush checks technical SEO factors such as crawlability, indexing, HTTPS, meta tags, page speed, Core Web Vitals, structured data, and mobile usability.

Five technical SEO issues identified

No.	Technical SEO Issue	Impact	Recommended Fix
1	Missing or poorly optimized meta descriptions	Can reduce search-result click-through rate	Add a unique, relevant meta description to every important page
2	Duplicate title tags	Makes it difficult for Google to understand which page is most relevant	Create a unique title for every indexable page
3	Slow page speed / Core Web Vitals issues	Creates a poor user experience and can negatively affect search performance	Compress images, reduce unnecessary scripts and improve server response time
4	Crawlability/indexing issues	Search engines may have difficulty discovering or indexing important pages	Check robots.txt, noindex directives, XML sitemap and internal links
5	Broken links / HTTP errors	Users and search-engine crawlers can encounter inaccessible pages	Replace broken URLs or redirect outdated pages to relevant live URLs

Semrush specifically recommends addressing crawl/indexing problems and major technical errors before lower-priority improvements.

Task : 2

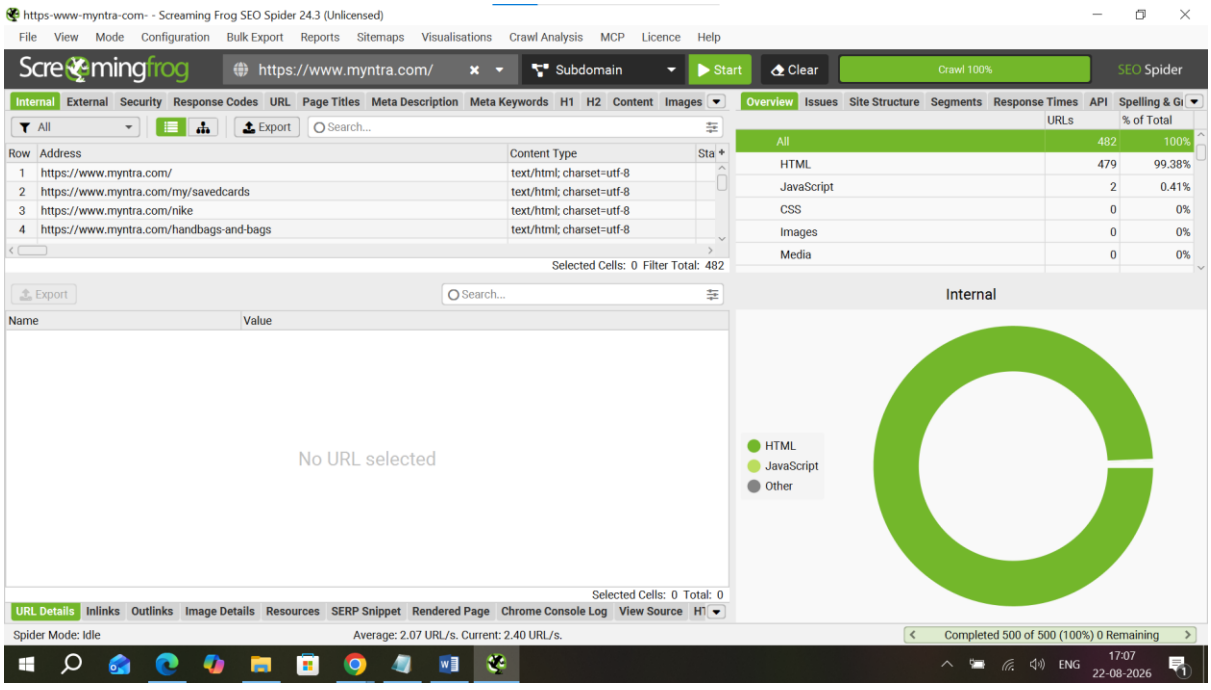

Screaming Frog SEO Spider Crawl and CSV Export

Website: Myntra – https://www.myntra.com/
Tool Used: Screaming Frog SEO Spider 24.3
Crawl Result: 500 URLs successfully crawled (100%)

Screaming Frog SEO Spider was used to crawl the Myntra homepage and discover internal URLs. The crawl successfully reached the free-version limit of **500 URLs**. The crawl data was exported into a CSV file containing URL and technical SEO information such as status code, indexability, page title, meta description, and heading data.

Exported File:

myntra_crawl_urls.csv

Task : 3

Prioritization of Technical SEO Issues from Screaming Frog Crawl

Website Crawled: Myntra
Tool Used: Screaming Frog SEO Spider 24.3
Total URLs Crawled: 500

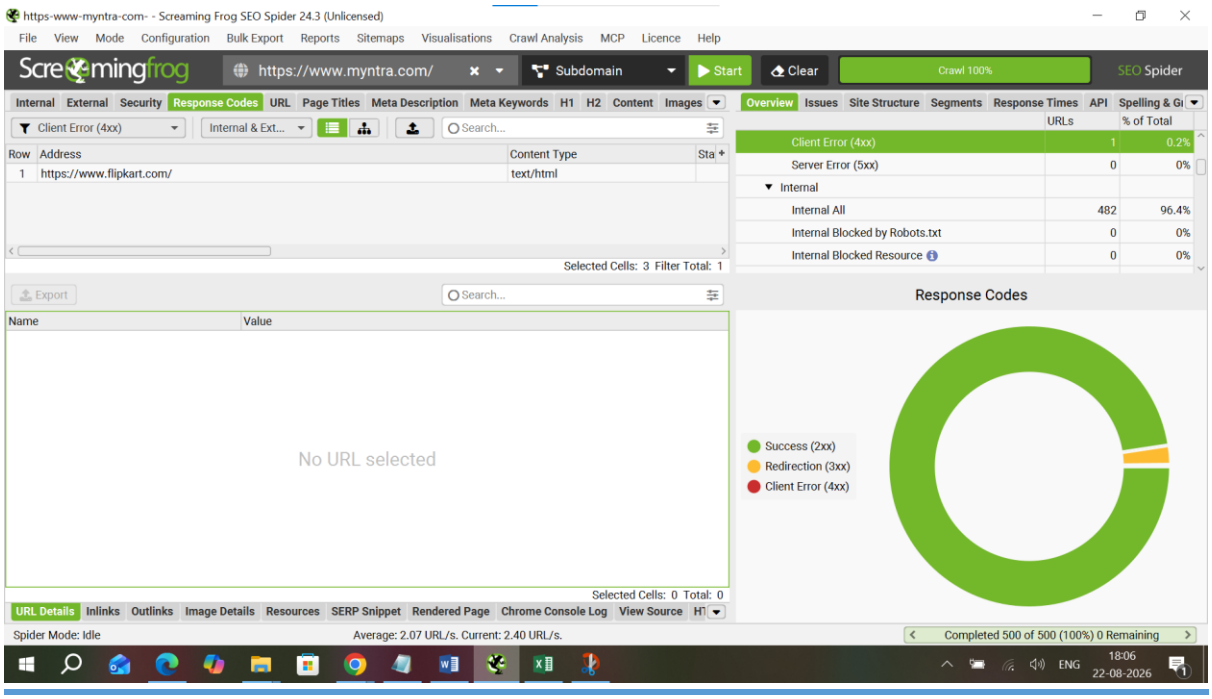

Based on the Screaming Frog crawl results, the following three technical SEO issues were identified and prioritized according to their potential impact on user experience, crawling, indexing, and search performance.

1. Broken Links / Client Errors (4xx) — Highest Priority

The crawl detected **1 URL with a Client Error (4xx)**. A broken or inaccessible URL can create a poor user experience and may prevent search engine crawlers from accessing the intended content.

Recommended Fix: Identify the source of the broken URL and either restore the page, correct the internal link, or implement an appropriate 301 redirect if the page has been permanently moved.

Client Error (4xx)

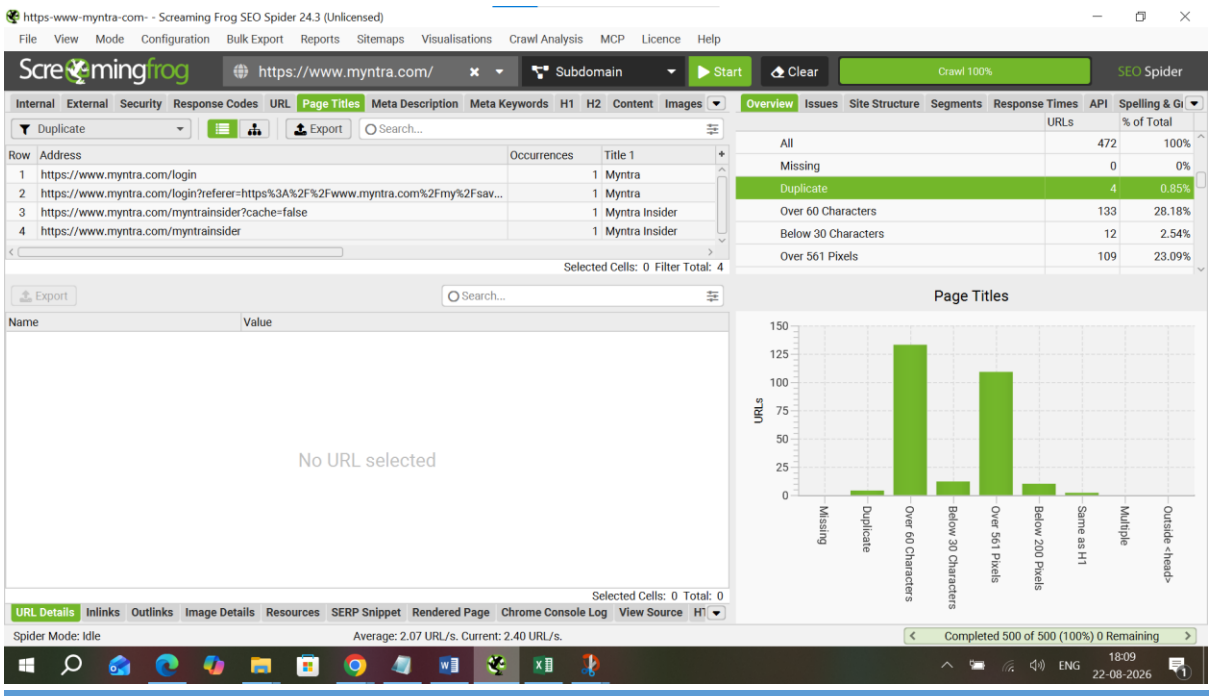

Duplicate Page Titles — High Priority

The crawl detected **4 URLs with duplicate page titles**. Duplicate titles can make it harder for search engines to understand the difference between similar pages and can reduce the relevance of search-result titles.

Recommended Fix: Create a unique, descriptive and keyword-relevant title tag for every important indexable page.

Duplicate Page Titles

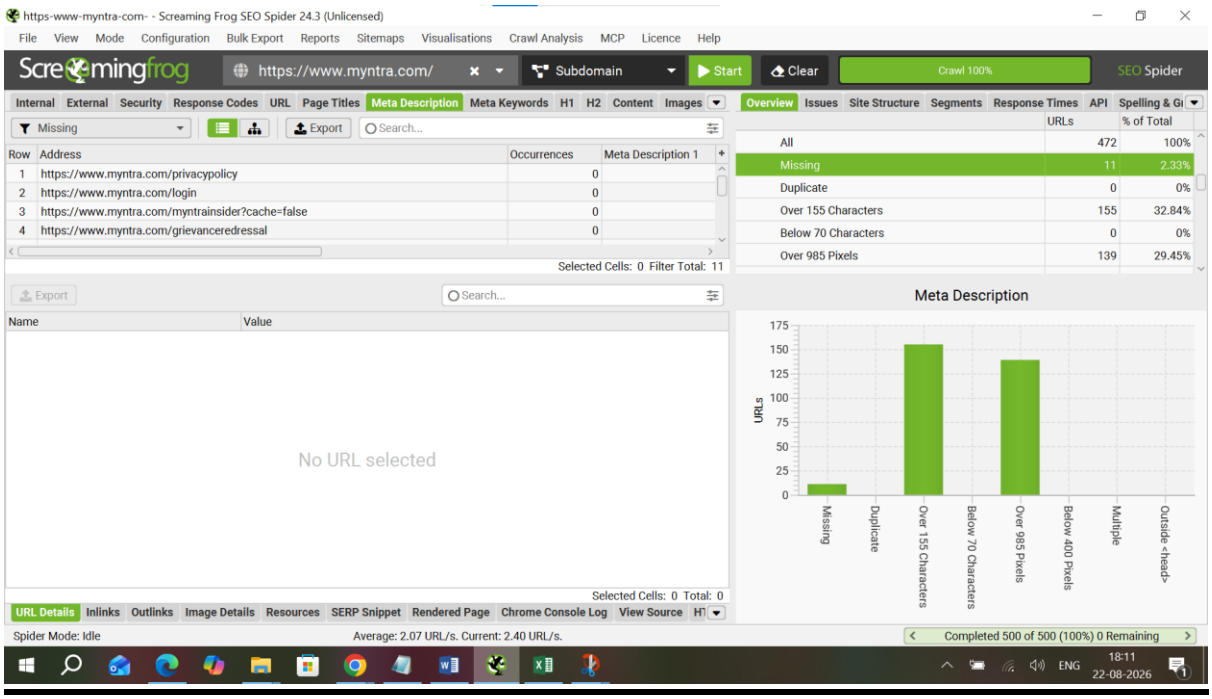

Missing Meta Descriptions — Medium Priority

The crawl detected **11 URLs with missing Meta descriptions**. Although missing Meta descriptions are not a direct ranking penalty, they can result in less useful search-result snippets and may negatively affect click-through rate.

Recommended Fix: Add a unique, relevant and concise Meta description to important indexable pages.

Missing Meta Descriptions

Priority	SEO Issue	URLs Detected	Recommended Action
1 – Highest	Client Errors (4xx)	**1**	Fix broken URL, internal link, or redirect
2 – High	Duplicate Page Titles	**4**	Create unique page titles
3 – Medium	Missing Meta Descriptions	**11**	Add relevant meta descriptions

Conclusion

The most urgent issue is the **4xx error** because it can directly prevent users and search-engine crawlers from accessing a URL. **Duplicate page titles** should be addressed next to improve page differentiation and relevance in search results. **Missing Meta descriptions** are the third priority because they mainly affect search-result presentation and potential click-through rate rather than directly causing a ranking penalty.

Task: 4

SEO Audit Report – Spotify

Website: Spotify
Audit Type: Technical SEO Audit

Main SEO Issues and Recommended Fixes

SEO Issue	Impact	Recommended Fix
Slow page loading	Slow pages can create a poor user experience and may negatively affect SEO performance.	Compress images, reduce unnecessary JavaScript and improve caching.
Missing or weak meta descriptions	Search engines may generate less relevant search snippets, which can reduce click-through rates.	Add unique and relevant meta descriptions to important pages.
Duplicate title tags	Duplicate titles can make it difficult for search engines to understand the difference between similar pages.	Create unique and descriptive title tags for each important page.
Crawl and indexing issues	Important artist, album and playlist pages may not be discovered or indexed properly.	Check robots.txt, XML sitemap, canonical tags and internal links.
Mobile usability problems	A poor mobile experience can negatively affect users and search performance.	Use responsive design, readable text and properly sized buttons and links.

Conclusion

The most important SEO improvements for Spotify should focus on crawlability, indexing and website performance. Improving page speed, fixing metadata and ensuring important pages can be properly crawled and indexed would make the website more search-engine friendly and provide a better user experience.

Recommended Priority:

1. Fix crawl and indexing issues
2. Improve page speed
3. Fix duplicate/missing metadata
4. Improve mobile usability

Task : 5

Web Server Log Analysis Using AI

Sample log file

66.249.66.1 - - [22/Aug/2026:10:15:12 +0530] "GET / HTTP/1.1" 200 15432

66.249.66.1 - - [22/Aug/2026:10:15:20 +0530] "GET /products HTTP/1.1" 200 18321

66.249.66.1 - - [22/Aug/2026:10:15:25 +0530] "GET /product/phone-x HTTP/1.1" 404 721

AI-generated summary

The log shows two notable patterns. First, a crawler successfully accessed the homepage, product page and robots.txt, but one product URL returned a **404 Not Found** response. This indicates a potentially broken or removed URL that should be investigated.

Second, another IP address requested /wp-login.php, /admin, and /config.php, all of which returned 404 responses. These requests are unusual for a normal visitor and resemble automated probing for common administrative or configuration files. The activity should therefore be monitored and potentially blocked if it continues.

Do I agree with the AI findings?

Yes, I agree.

The first issue is a genuine crawl error because the product URL returned **HTTP 404**. The second pattern is also suspicious because several administrative/configuration paths were requested within seconds of each other.

However, the IP address alone is **not enough to prove that the traffic is malicious**. The server administrator should check additional log entries, request frequency, user-agent strings and IP reputation before taking blocking action.

Final conclusion: The main SEO-related problem is the 404 product URL, while the repeated requests for administrative files represent unusual bot activity that should be monitored.
