Task : 2

Google Analytics 4 (GA4) Traffic Acquisition Report

Website: AI in Everyday Life Blog (https://ai-everyday-life-2026.blogspot.com/)

Reporting period: 22 October 2026 – 28 October 2026 (Last 7 days)

Results

Metric	GA4 result
Total users	4
New users	4
Returning users	0
Top traffic source	Direct
Direct users	4 (100%)
Traffic acquisition sessions	4
Second traffic source	No second source was recorded in the report

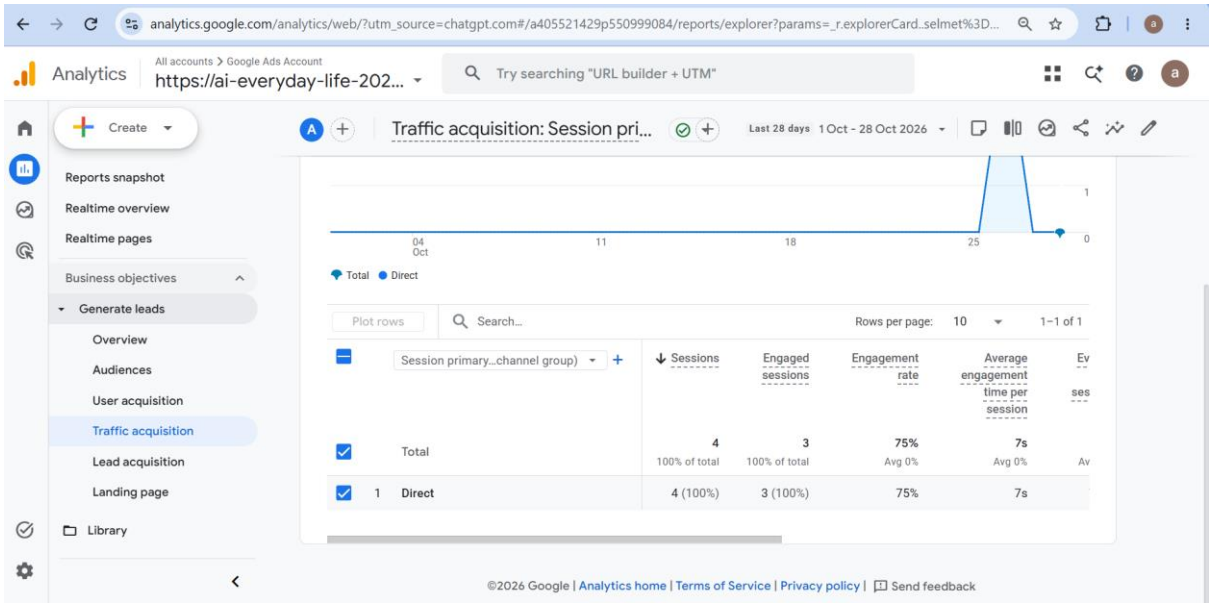

Analysis

During 22–28 October 2026, GA4 recorded 4 users, all of whom were new users. The User acquisition report attributes all 4 users to Direct traffic. The Traffic acquisition report also shows 4 sessions from Direct, accounting for 100% of recorded sessions. No other traffic source appeared in the reports for this period, so a second source cannot be reported from the available data.

Recommendation: Share the blog through trackable campaign links and continue publishing useful content to gather more data. This will help determine whether visitors arrive through Organic Search, Referral, or other channels.

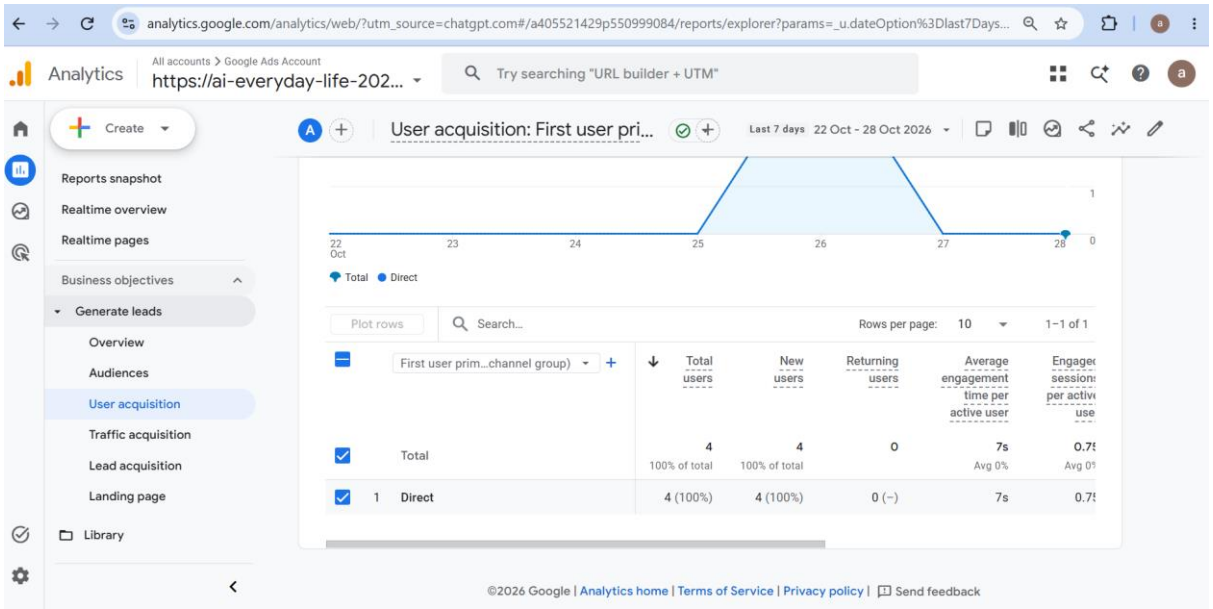

Screenshot 1: Traffic Acquisition (Last 7 days)

This report shows Direct as the only recorded channel, with 4 sessions (100%) during 22–28 October 2026.

Screenshot 2: User Acquisition (Last 7 days)

This report shows 4 total users, 4 new users, 0 returning users, and Direct as the only recorded first-user channel.

Task : 3

ENGAGEMENT REPORT – PAGES AND SCREENS

Google Analytics 4 | Website: AI in Everyday Life

1. Objective

To use the Google Analytics 4 Pages and screens report to identify total website views, the most-viewed page, and page-level performance during the selected period.

2. Reporting Period

22 October 2026 – 28 October 2026 (Last 7 days)

3. Results

Metric	Result
Total website views	16
Active users	4
Top-performing page	Home page (/)
Views on top page	5
Contact page (/p/contact.html)	3 views
About page (/p/about.html)	2 views
AI blog post page	1 view
AI Applications label page	1 view
Average engagement time per active user	7 seconds

4. Analysis

The Pages and screens report shows 16 views from 4 active users during the selected seven-day period. The home page was the most-viewed page, receiving 5 views (31.25% of total views). The Contact page received 3 views and the About page received 2 views. Average engagement time per active user was 7 seconds, so the website could be improved to encourage visitors to explore more content.

5. Recommendations for Improvement

Make the home page more engaging with a clear introduction and simple navigation.

Add relevant images, useful examples, and readable headings to blog posts.

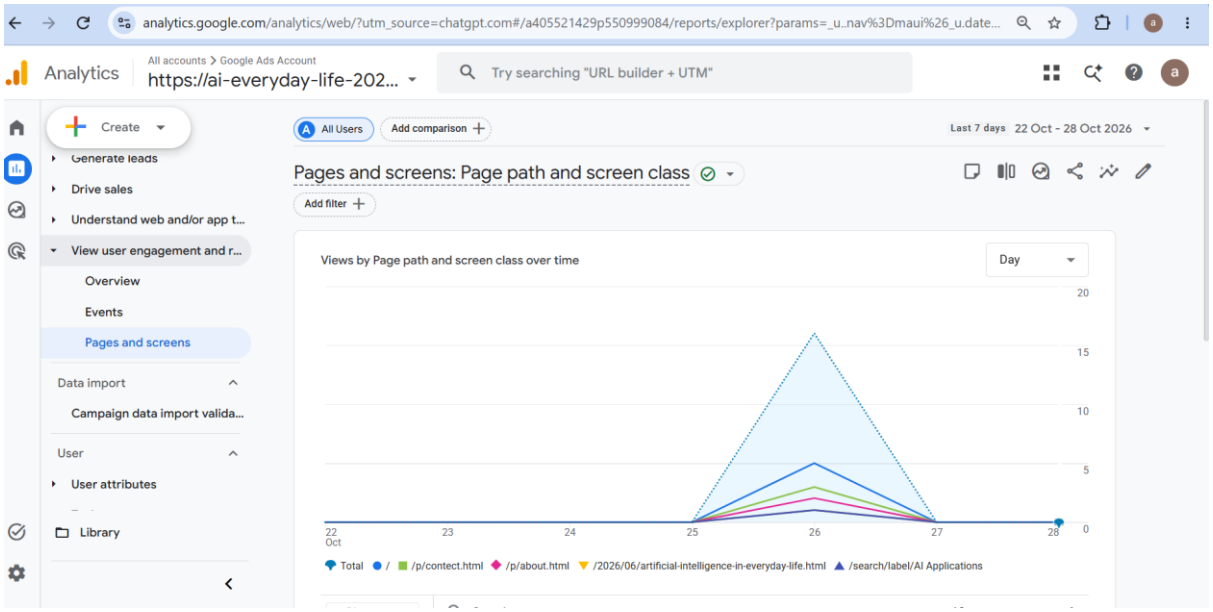

Add internal links from the home page to the About, Contact, and AI article pages.

Use clear calls to action such as “Read More” or “Explore AI Applications.”

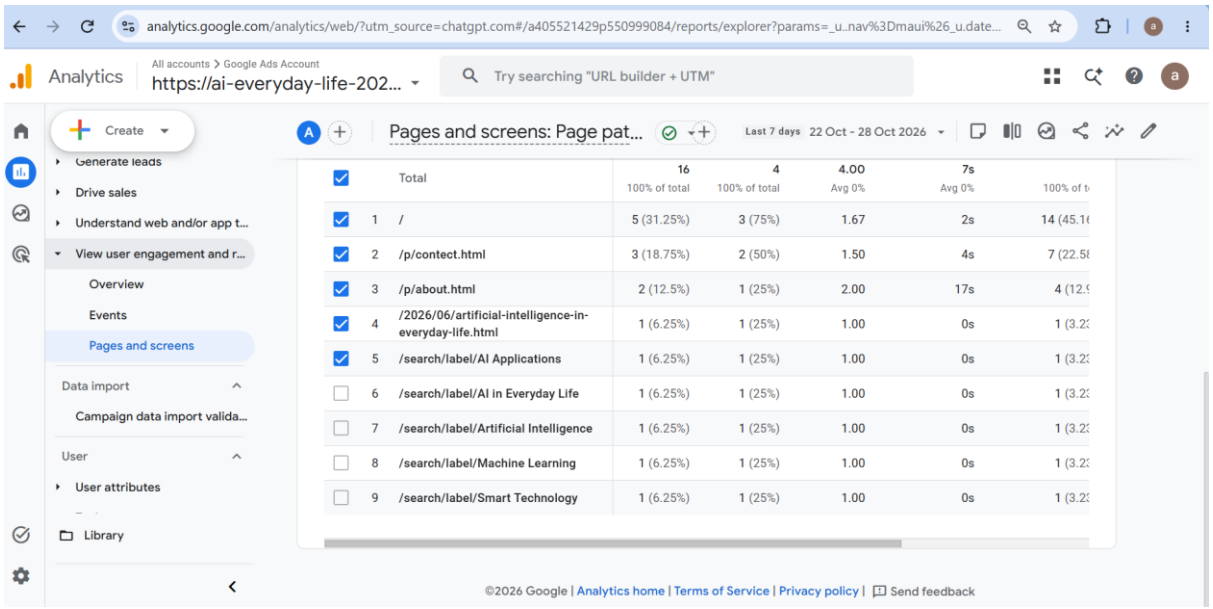

Review GA4 engagement time and page views regularly to identify the best-performing content.

6. Screenshots / Evidence

Screenshot 1: Pages and screens report showing the views trend for 22–28 October 2026

Screenshot 2: Pages and screens table showing total views and page-level results.

Task : 4

Average Engagement Time per User

1. Objective

To find the average engagement time per active user in Google Analytics 4 (GA4) and suggest ways to improve website engagement.

2. Reporting Period

22 October 2026 – 28 October 2026

3. GA4 Report Data

Metric	Result
Website	AI in Everyday Life
Average Engagement Time per Active User	7 seconds
Active Users	4
Total Views	16

4. Analysis

According to Google Analytics 4, the average engagement time per active user was 7 seconds during the selected reporting period. The website recorded 4 active users and 16 total views.

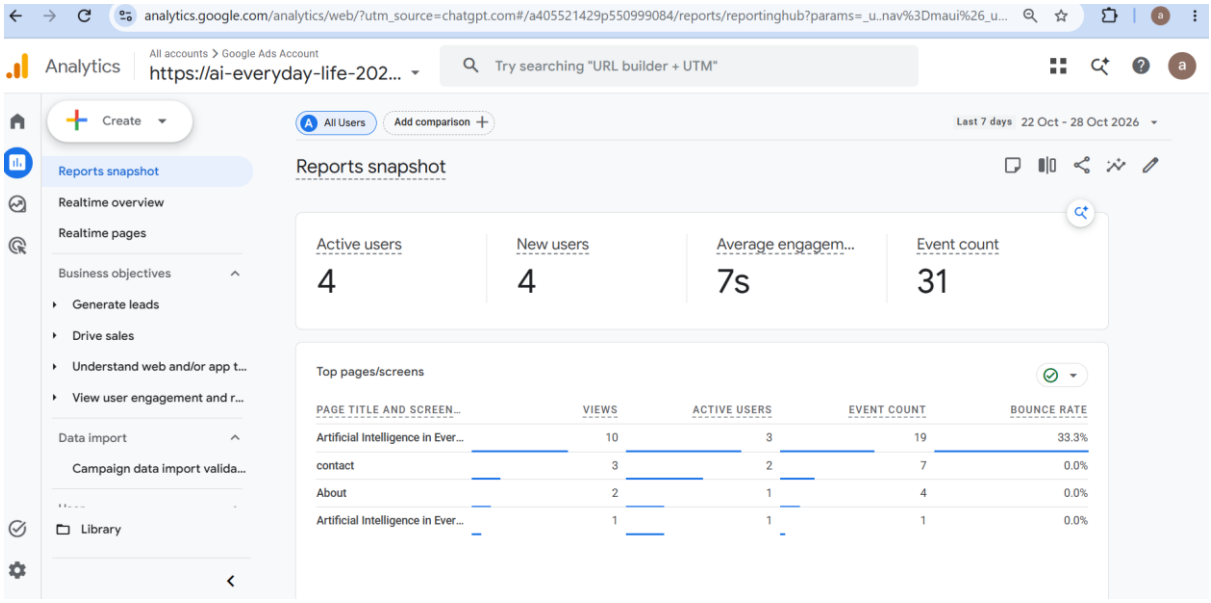

The short average engagement time suggests that visitors may not be spending much time exploring the website's content. However, because the website had only 4 active users during this period, more data is needed to draw a reliable conclusion.

5. Suggestions to Improve Engagement

1. Improve content quality: Publish informative and interesting articles about Artificial Intelligence in everyday life.
2. Use relevant images: Add suitable images and examples to make blog posts more attractive and easier to understand.
3. Improve navigation: Make it easy for visitors to find the Home, About, Contact, and blog pages.
4. Add internal links: Link related articles together to encourage visitors to explore more pages.
5. Improve mobile experience: Ensure the website is easy to read and navigate on smartphones.
6. Use clear calls to action: Add phrases such as “Read More” and “Explore More AI Applications.”
7. Monitor performance: Check GA4 regularly to understand whether these improvements increase engagement time and page views.

6. Conclusion

The average engagement time per active user was 7 seconds from 22 October to 28 October 2026. By improving content quality, website navigation, internal linking, and mobile usability, the website may encourage visitors to spend more time exploring its content. Future GA4 reports can be used to measure the impact of these improvements.

Task : 5

Automated Insight Report

Website: AI in Everyday Life
Reporting Period: 22 October – 28 October 2026

Website Traffic Data:

- Total Users: 4
- Total Sessions: 4
- Total Views: 16
- Direct Sessions: 4 (100%)
- New Users: 4

Automated Insight / Traffic Analysis:

GA4 traffic data shows that all 4 sessions came from the Direct traffic channel. No other traffic source was recorded during this period.

How is it useful?

Automated Insights help identify traffic trends, understand user behaviour, monitor website performance, and make better marketing decisions.

Recommendation: Improve SEO and social media promotion to attract visitors from different traffic sources.

Troubleshooting result for the assignment:

Problem identified	Incorrect Click ID condition
Cause	The trigger expected book-table, but the button's actual ID was book-table-btn.
Fix applied	Updated the trigger condition to Click ID equals book-table-btn.
Expected result	The GA4 event tag fires when Book Table is clicked.

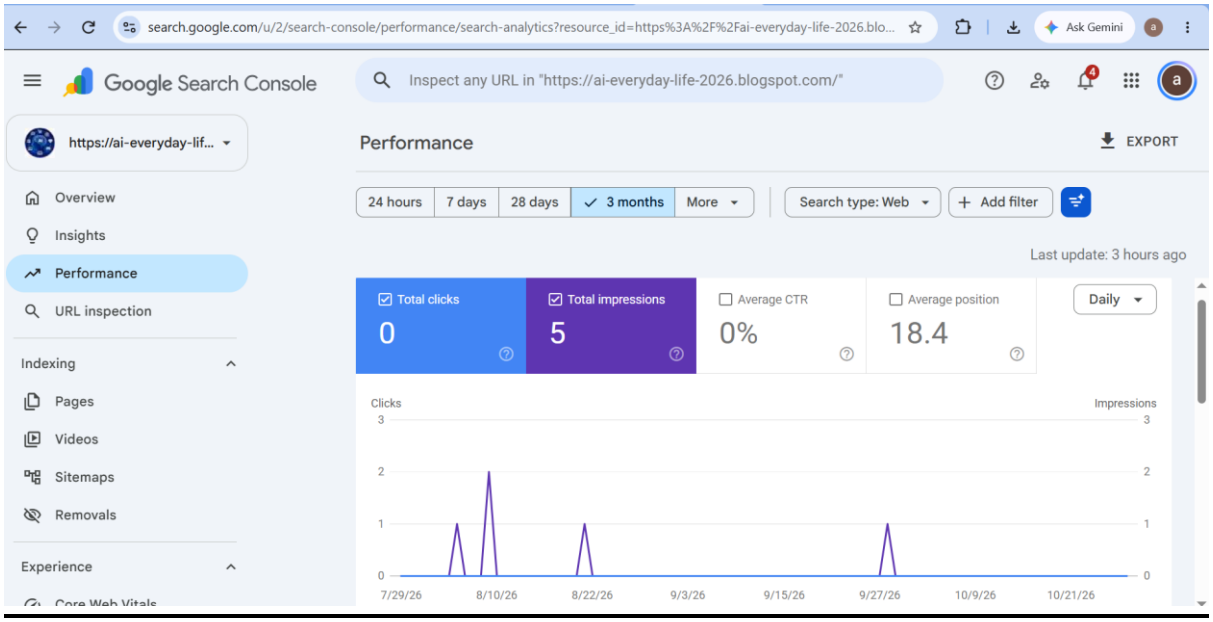

This is the documented simulated troubleshooting result; you must run Preview mode yourself to confirm it on your page.

SESSION 3

GOOGLE SEARCH CONSOLE , INDEXING , CRAWLING & PERFORMANCE REPORTS

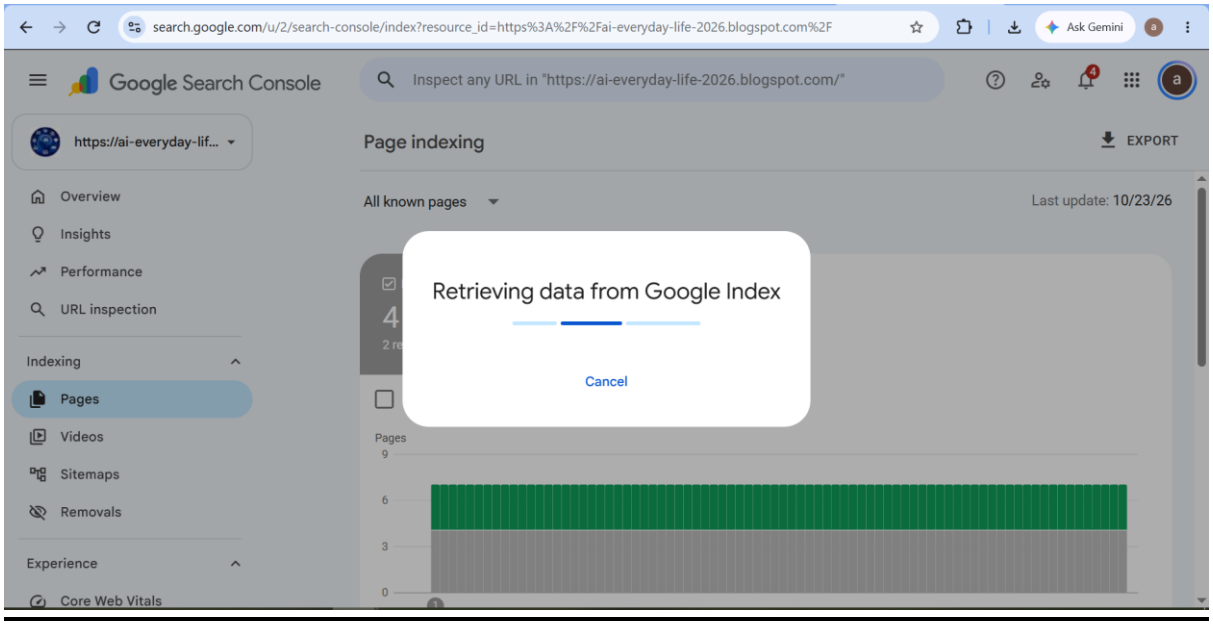

Task: 1

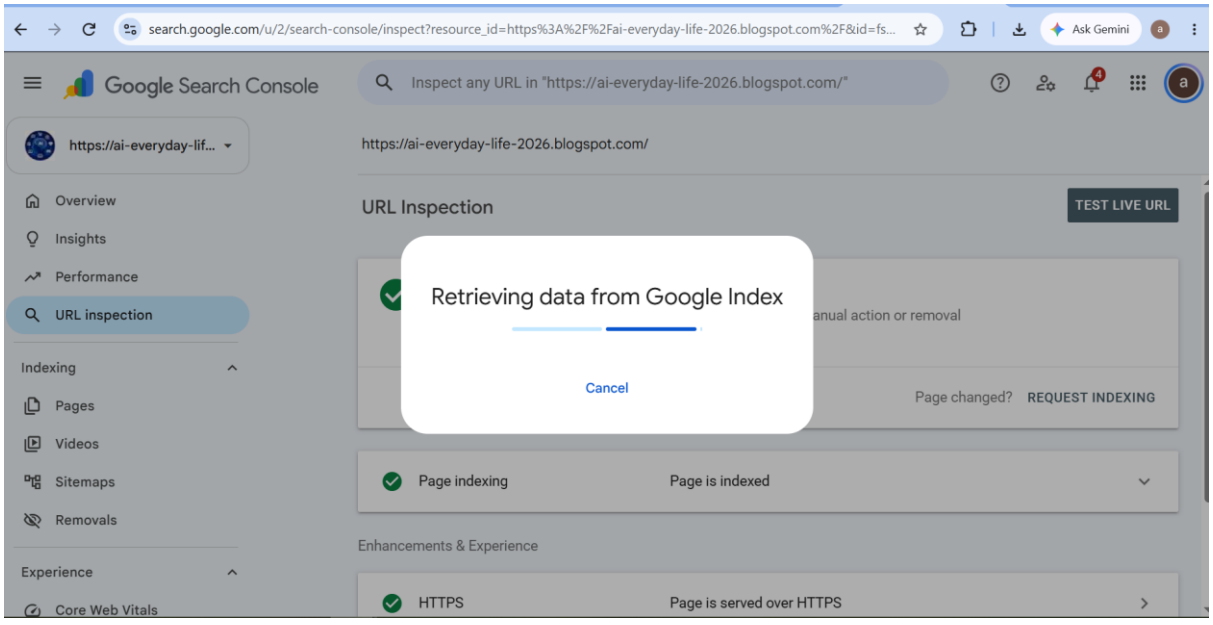

Add a website to Google Search Console

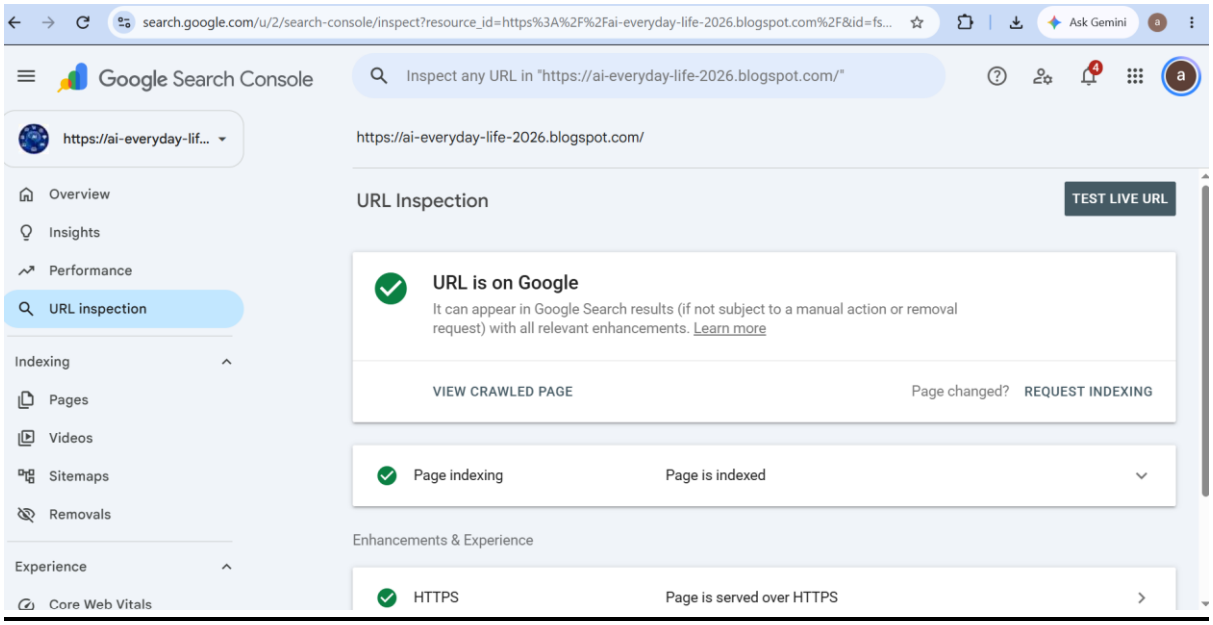

TASK : 2

Request indexing of the homepage

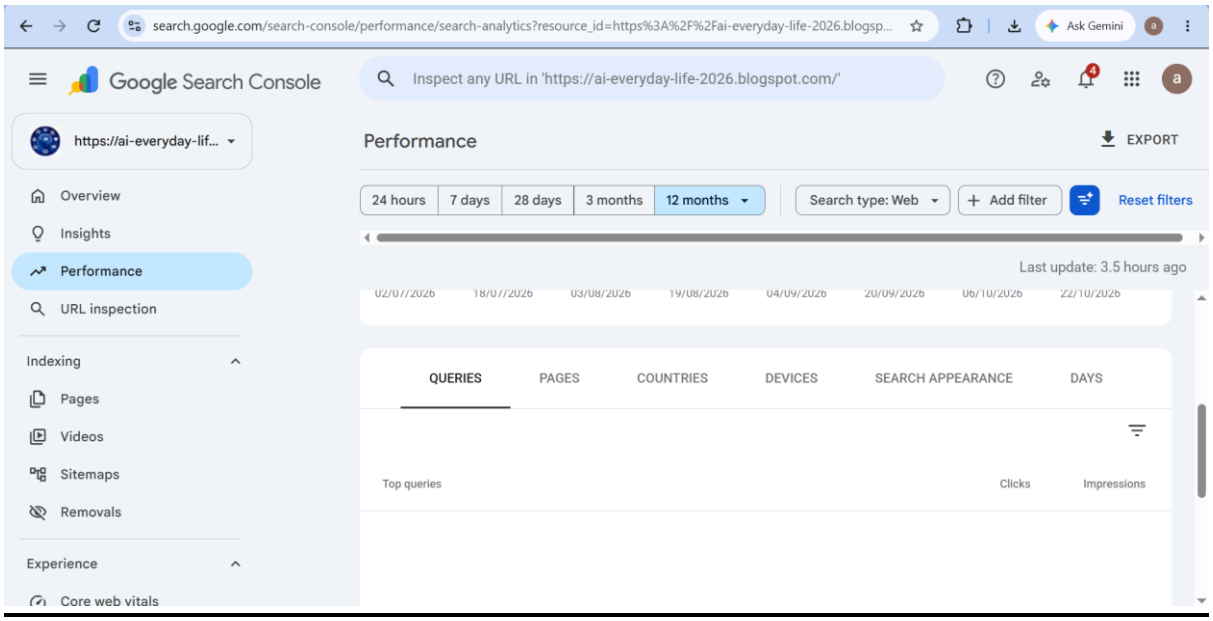

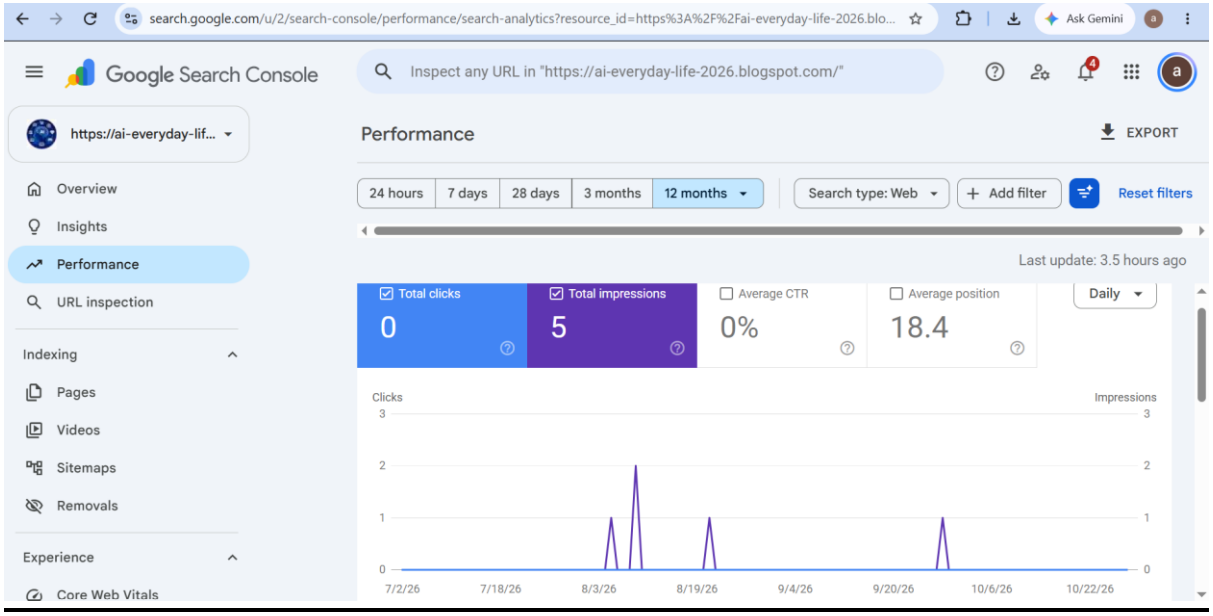

TASK : 3

Record the Page Indexing (Coverage) report

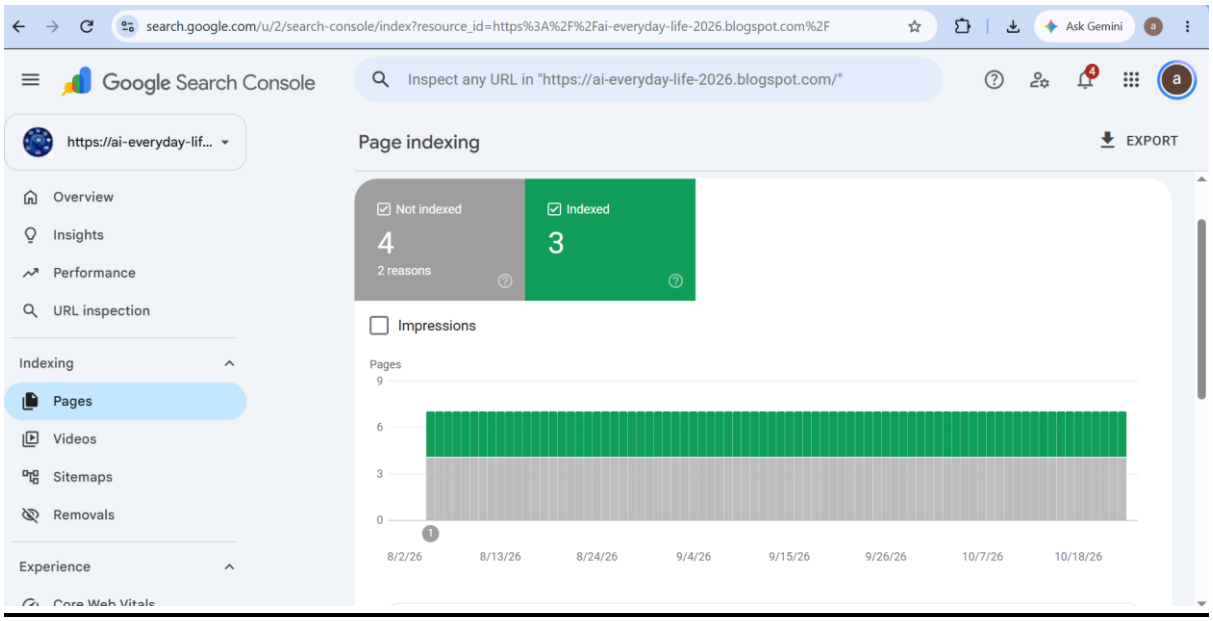

TASK : 4

Identify the top 3 search queries

TASK : 5

Compare indexed pages with actual website pages

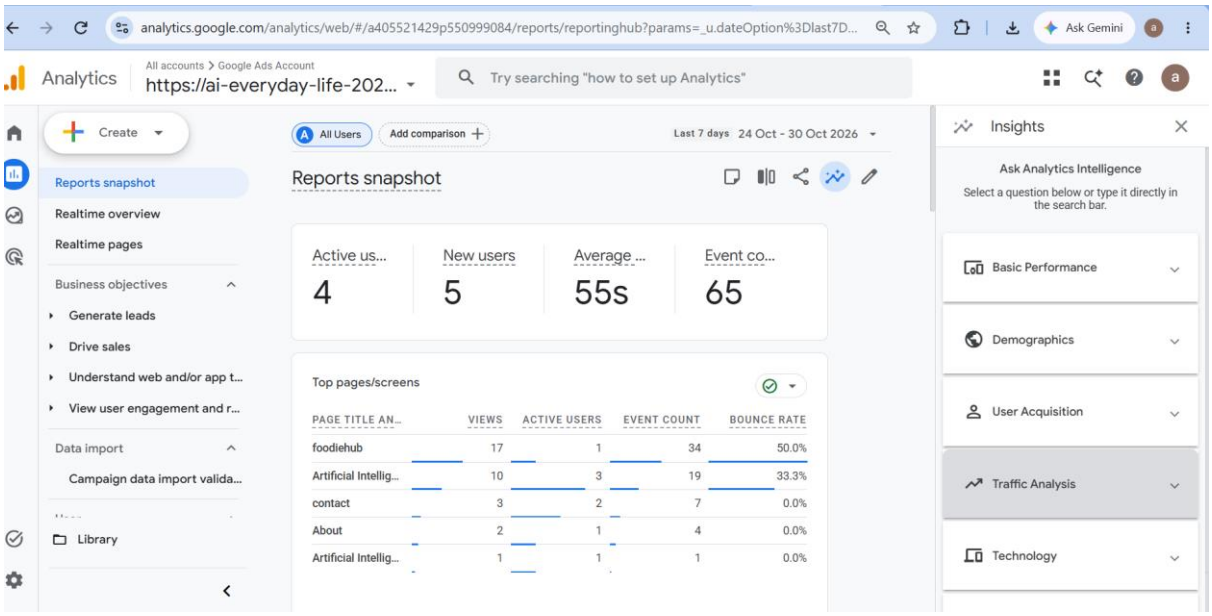

SESSION : 4

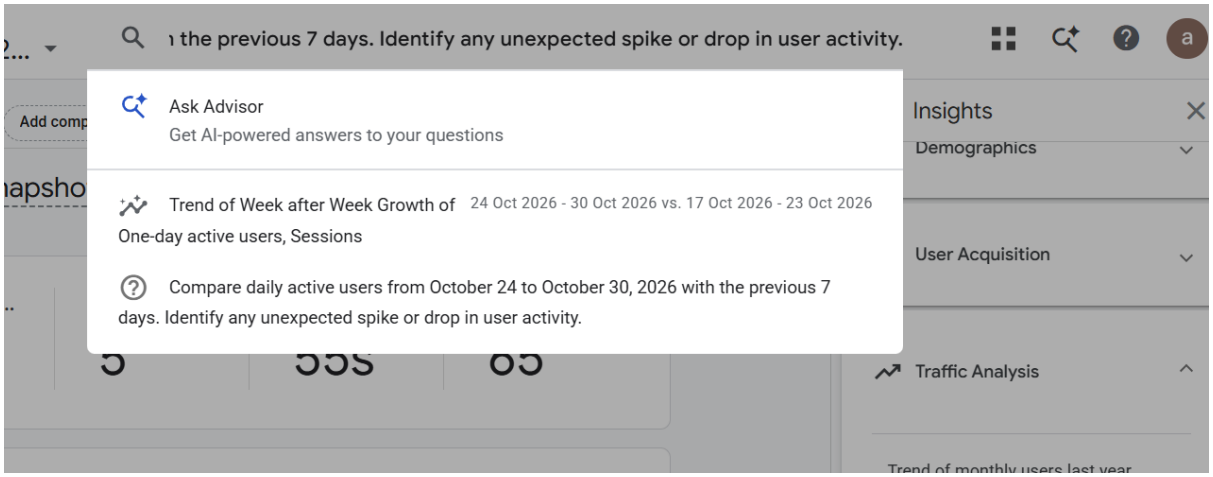

AI BASED DATA INTERPRETATION & INSIGHTS

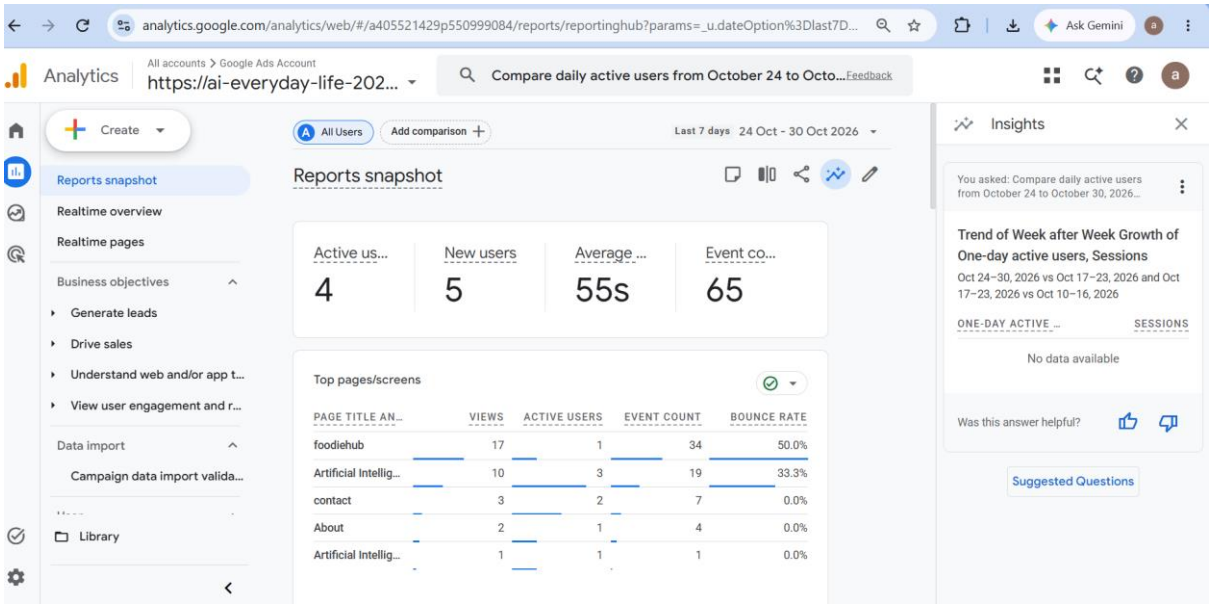

TASK : 1

AI Insights

Google Analytics 4 AI Insights was opened for the demo website. The selected date range was 24 October to 30 October 2026. The report showed 4 active users and 5 new users. However, GA4 displayed "No data available" for the weekly comparison, so no unexpected spike or drop could be identified.

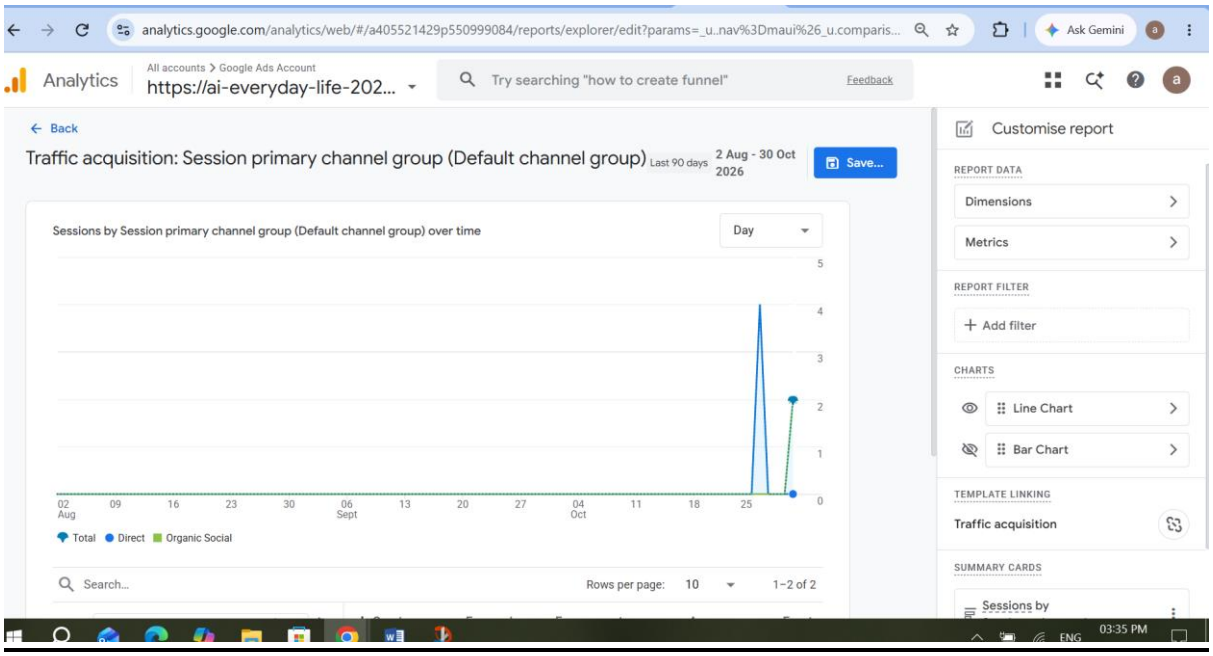

the previous 7 days. Identify any unexpected spike or drop in user activity.

Suggested Questions

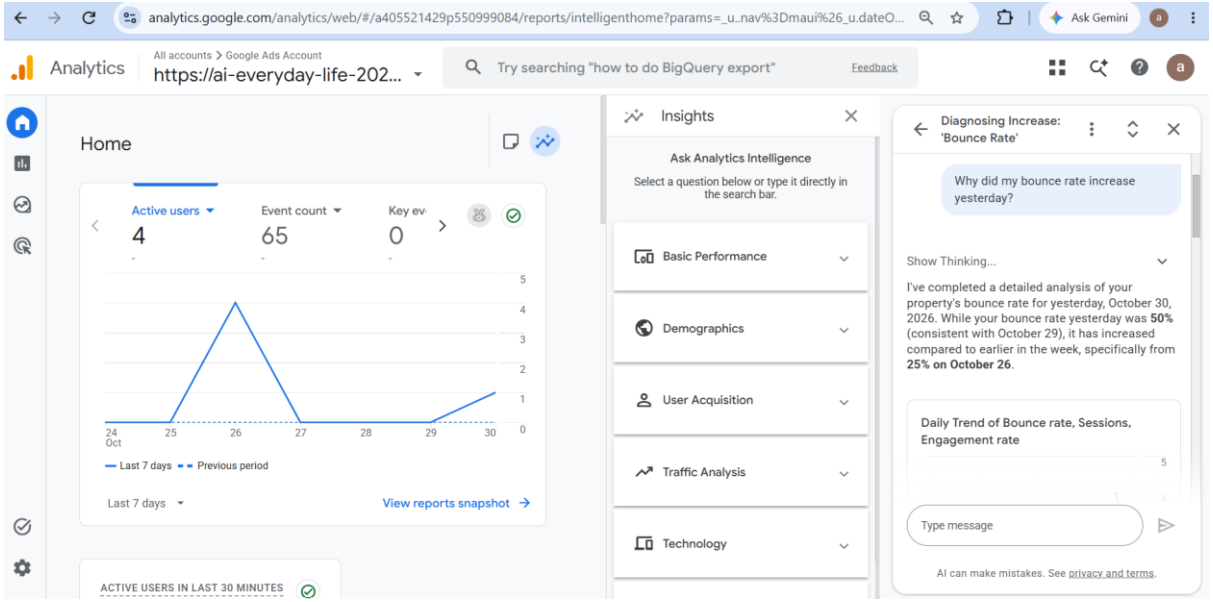

TASK : 2

Identify an unexpected spike or drop

TASK : 3

Ask Analytics Intelligence a question

Question Asked: Why did my bounce rate increase yesterday?

AI-Generated Insight:

Google Analytics reported that the bounce rate on October 30, 2026, was 50%, compared to 25% on October 26.

The main reasons were:

1. Low website traffic, with only 2 sessions yesterday.
2. One session had a "(not set)" landing page and a 100% bounce rate.
3. Engagement rate decreased from 75% to 50%.

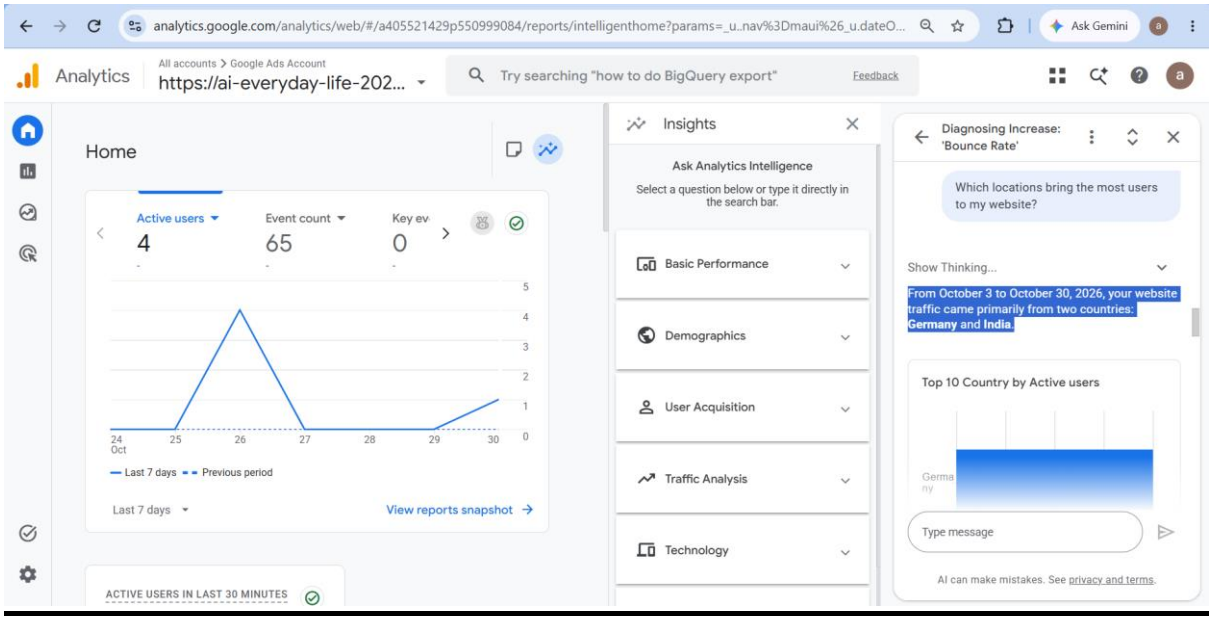

Conclusion:

The bounce rate increased mainly because of low traffic and a possible tracking configuration issue. Monitoring website engagement over the next three days is recommended.

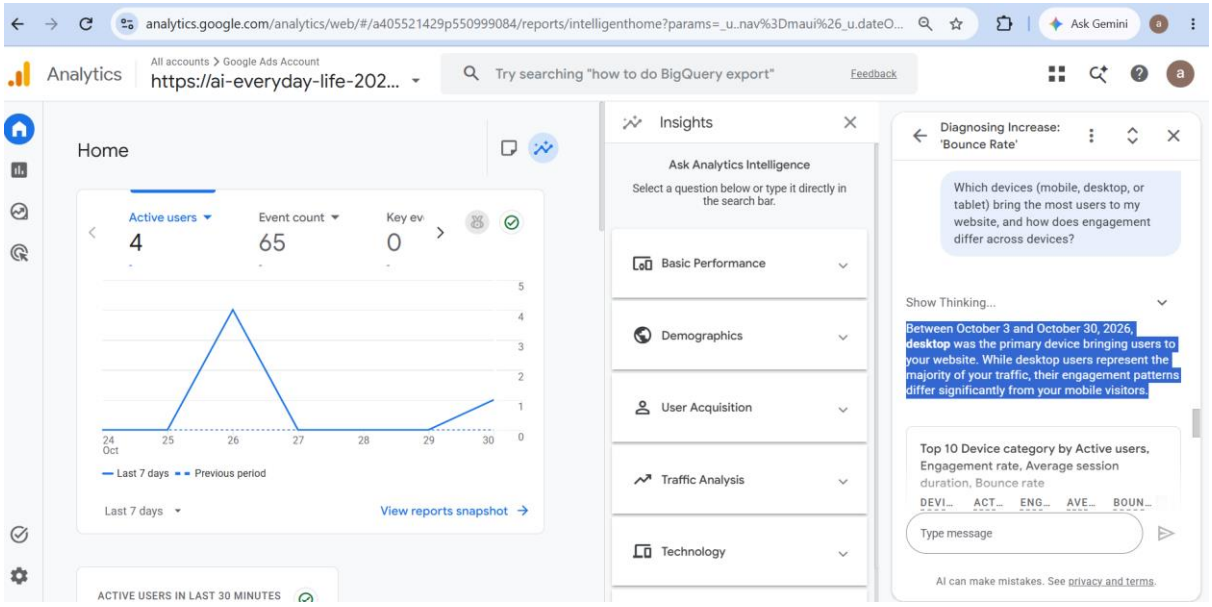

TASK : 4

Compare two AI-generated insights

1. Which locations bring the most users to my website?

2. Which devices (mobile, desktop, or tablet) bring the most users to my website, and how does engagement differ across devices?

Insight 1: User Location

- Germany and India both generated 2 active users.
- Top city: Frankfurt am Main.
- Indian cities: Morbi, Rajkot and Surat.

Marketing Action: Run location-based marketing campaigns targeting users in India, especially Morbi, Rajkot and Surat.

Insight 2: Device Type

- Desktop: 3 active users with 60% engagement rate.
- Mobile: 1 active user with 100% engagement rate.
- Tablet: No users.

Marketing Action: Optimize the website for mobile devices with a responsive design and faster loading speed to improve mobile user experience.

Conclusion:

Location insights help identify target markets, while device insights help improve website experience across different devices.

TASK : 5

GA4 Traffic Report Analysis (1 October – 30 October 2026)

Report Findings:

- Total Sessions: 6
- Engaged Sessions: 4
- Engagement Rate: 66.67%
- Average Engagement Time: 36 seconds
- Direct Traffic: 4 sessions (66.67%)
- Organic Social: 2 sessions (33.33%)

Two Actionable Recommendations:

1. **Improve Direct Traffic Engagement:** Direct traffic has a low average engagement time of 7 seconds. Improve landing page content, website navigation and call-to-action buttons to encourage visitors to explore more pages.
2. **Increase Organic Social Traffic:** Share engaging content regularly on Instagram and other social media platforms. Add relevant links to website pages to attract more visitors and improve engagement.

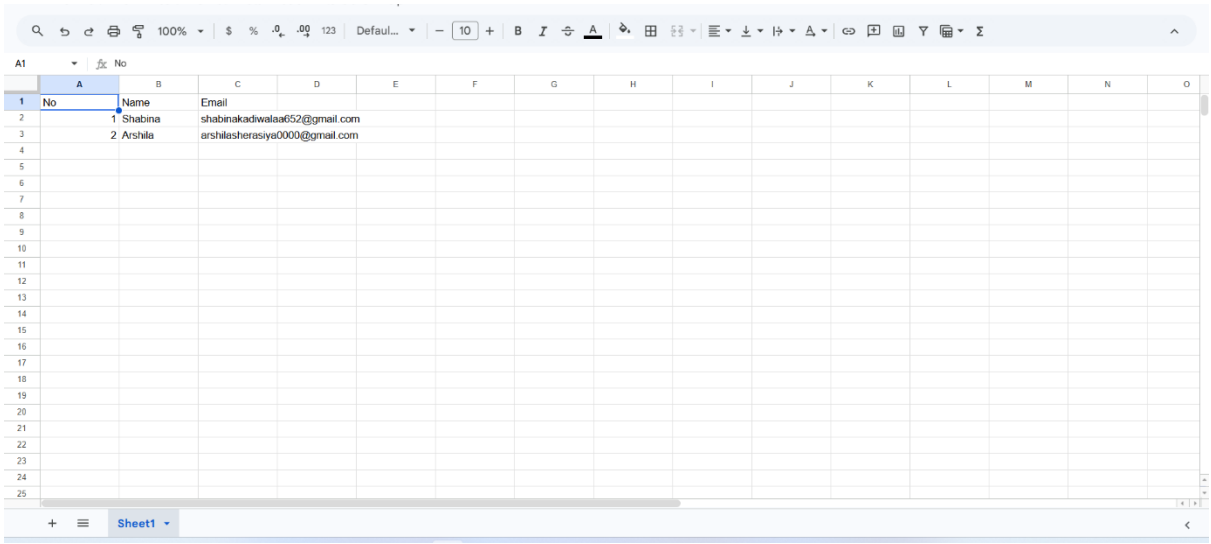

Conclusion:

Improving website content, navigation and social media marketing can help increase user engagement and website traffic.

The Google Analytics node ran and returned zero rows. n8n ends the run when a node returns no items, so the summary and Telegram steps never ran. The credentials and the property are connected and the call didn't error. GA4 simply had no page-view rows for yesterday (Nov 2).
Possible causes:
Wrong property: the selected property may not be the one your site reports to.
No traffic: the site may have had no visits yesterday.
Data delay: GA4 can take a day or so to process data.
You can check by opening the property in Google Analytics and looking at Reports for Nov 2. If it shows traffic, tell me and I'll look into the node. If the site just had a quiet day, I can change the workflow to post a "0 visits" message when there's no data. Tell me if you want that.

What triggers this workflow?
A trigger is a step that starts your workflow
Search nodes...
Trigger manually
Runs the flow on clicking a button in n8n. Good for getting started quickly
On app event
Runs the flow when something happens in an app like Telegram, Notion or Airtable
On a schedule
Runs the flow every day, hour, or custom interval
On webhook call
Runs the flow on receiving an HTTP request
On form submission
Generate webforms in n8n and pass their responses to the workflow
When executed by another workflow
Runs the flow when called by the Execute Workflow node from a different workflow
On chat message

Task : 5

Assignment: Integrating n8n with Google Analytics 4 and Telegram for Automated Reporting

1. Objective

The objective of this task was to integrate Google Analytics 4 with Telegram using n8n to automatically retrieve website analytics data and send daily reports through Telegram.

2. Prompt Used in ChatGPT

"Create a beginner-friendly, step-by-step guide for integrating n8n with Google Analytics 4 and Telegram for automated reporting. Explain how to connect Google Analytics, retrieve metrics such as total users, sessions, and page views, create a Telegram bot, configure Telegram credentials, format the report, schedule daily reporting, test the workflow, and troubleshoot common errors. Explain each step in simple language."

3. Steps Generated by ChatGPT and Followed

1. Created a new workflow in n8n named **GA4 to Telegram Automated Reporting**.
2. Connected Google Analytics 4 to n8n using Google Analytics credentials.
3. Selected the GA4 property named Shabina blog.
4. Configured the Google Analytics report to retrieve:
    - Total Users
    - Sessions
    - Page Views
5. Selected the last seven days as the reporting period.
6. Created a Telegram bot using BotFather.
7. Configured Telegram credentials in n8n using the bot access token.
8. Retrieved my Telegram Chat ID and entered it into the Telegram node.
9. Configured the Telegram Send Message action to send the analytics report.
10. Added a Schedule Trigger to run the workflow every day at 9:00 AM.
11. Connected the workflow in this order:

Schedule Trigger → Google Analytics → Telegram Send Message

12. Tested the Telegram integration and confirmed that the analytics report was successfully received on Telegram.

4. Troubleshooting and Adaptations

During implementation, I faced several issues:

Problem 1: Google Analytics API error

- The Google Analytics property dropdown initially showed a 403 error.
- The error occurred because the Google Analytics Admin API was not enabled in Google Cloud.
- I opened Google Cloud Console and enabled the Google Analytics Admin API.
- After enabling it, the property loaded successfully.

Problem 2: Telegram Web was not opening on my laptop

- Telegram Web was not loading on my laptop.
- I used the Telegram mobile application instead to create and configure the bot.

Problem 3: Creating a Telegram bot

- Initially, I created a Telegram channel instead of a bot.
- I corrected this by using the official BotFather account and creating a bot with the /newbot command.

Problem 4: Finding the Telegram Chat ID

- I could not find the Telegram Trigger option in my n8n interface.
- Instead of using a Telegram Trigger, I used the @userinfobot Telegram bot to retrieve my personal Telegram user ID.
- I entered this ID into the Chat ID field in n8n.

Problem 5: Bot token security

- The bot token was accidentally exposed in screenshots during setup.
- I revoked the exposed token through BotFather and generated a replacement token before configuring the integration.

5. Final Workflow

The final workflow contains:

- Schedule Trigger: Starts the workflow automatically every day at 9:00 AM.
- Google Analytics: Retrieves website analytics data for the selected reporting period.
- Telegram Send Message: Sends the retrieved analytics report to my Telegram account.

6. Testing and Result

I successfully executed the Google Analytics node and retrieved actual website analytics data.

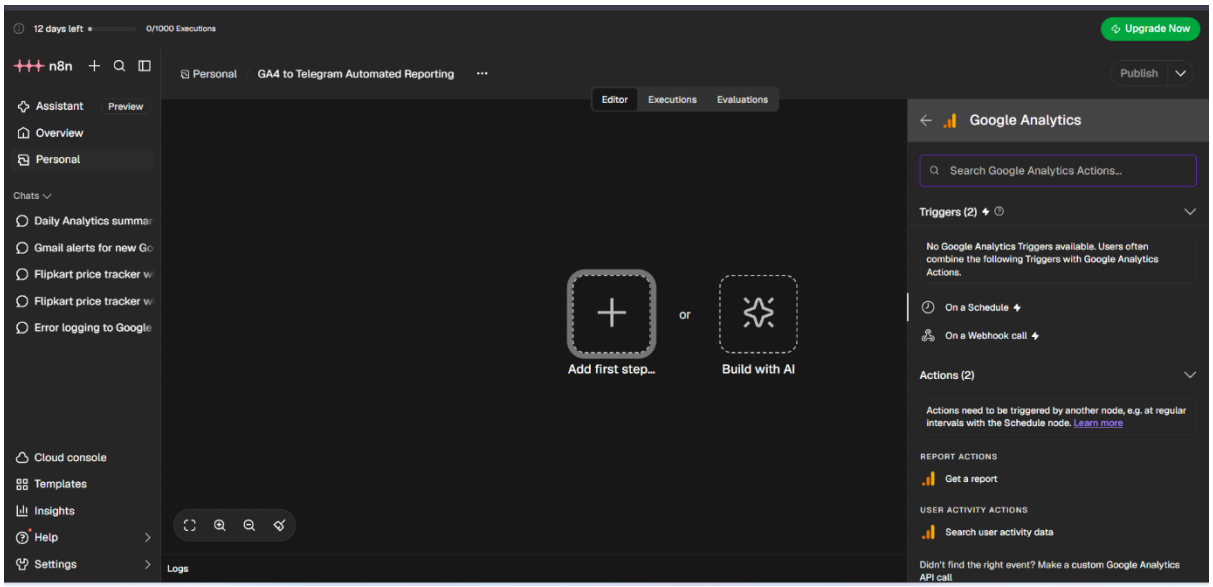

I also successfully tested the Telegram Send Message node and received the analytics report on my Telegram account.

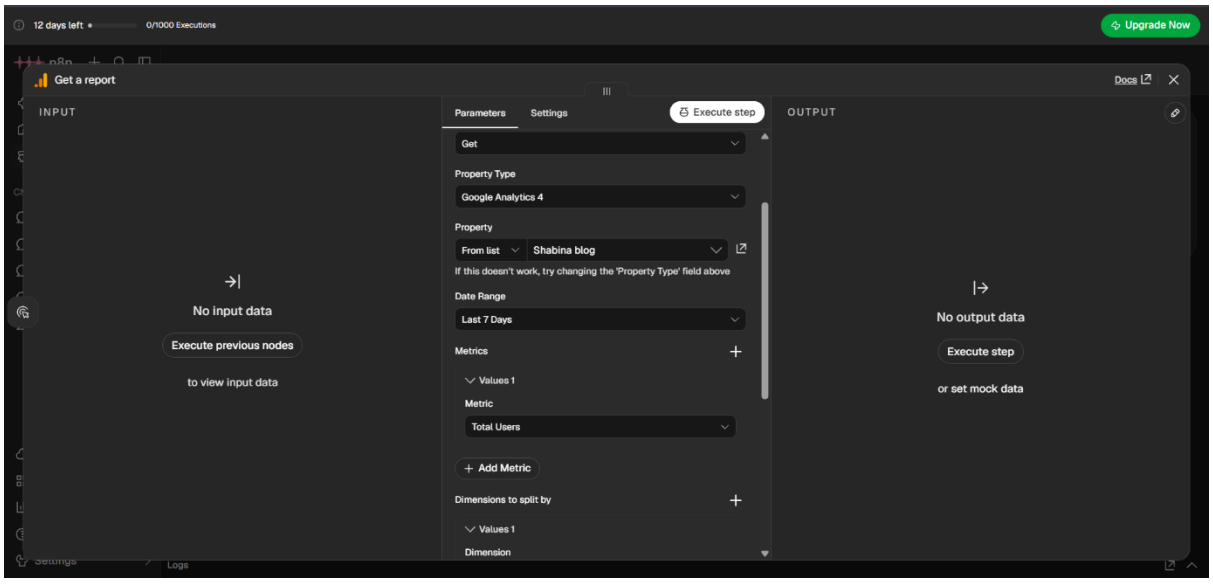

The integration successfully demonstrated that n8n can retrieve Google Analytics data and deliver it through Telegram.

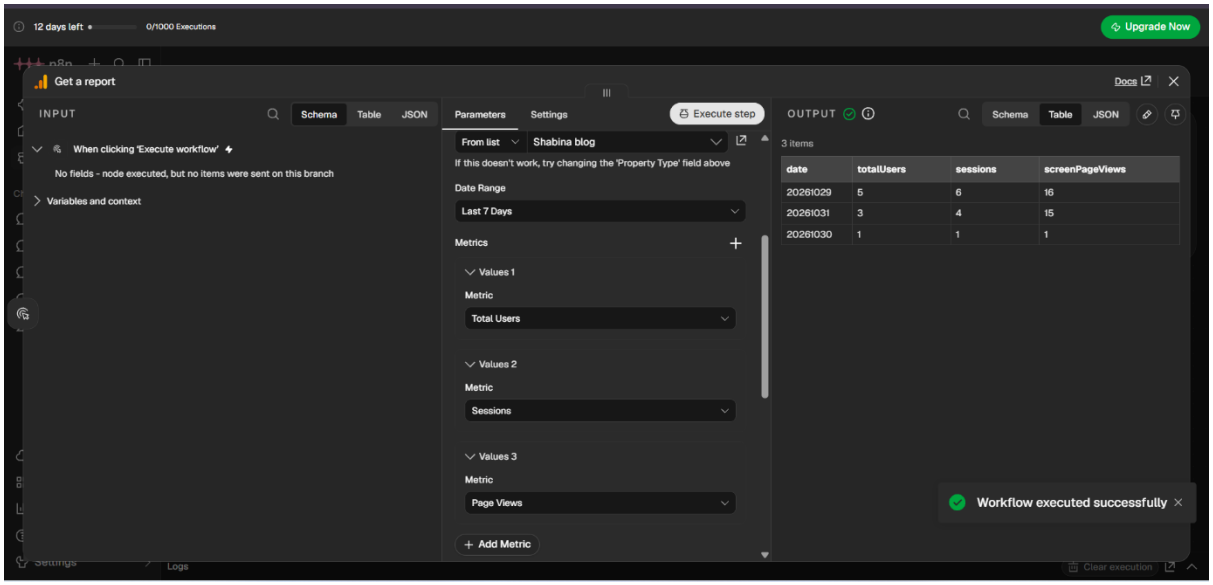

7. Conclusion

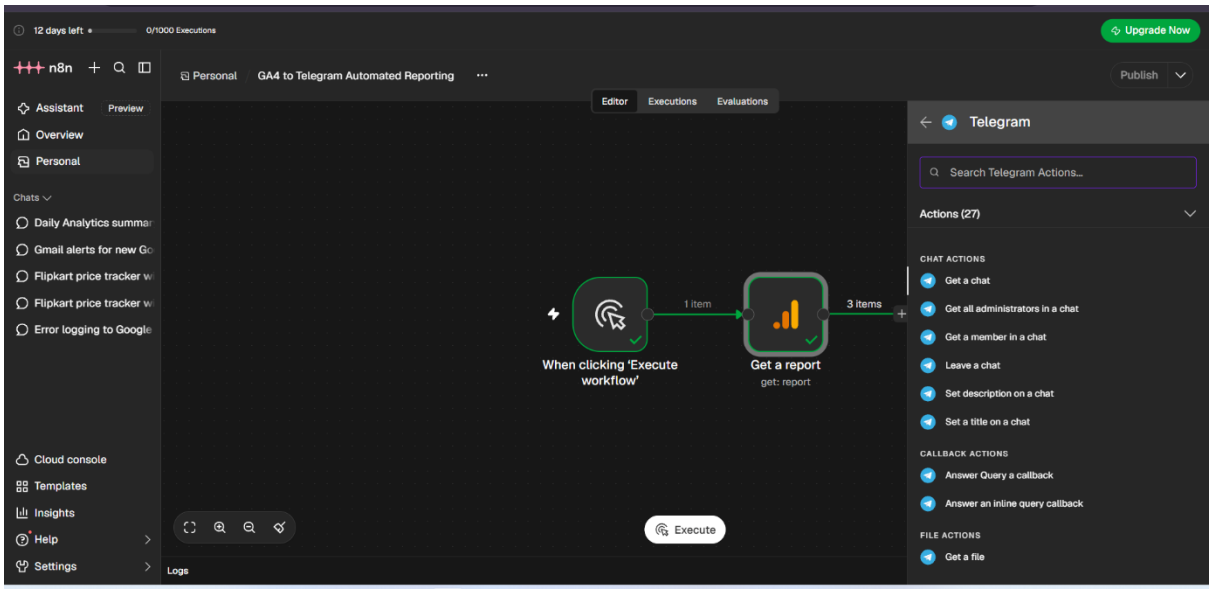

Through this task, I learned how to integrate Google Analytics 4 with Telegram using n8n. I learned how to configure API access, create a Telegram bot, retrieve a Chat ID, connect workflow nodes, schedule automated tasks, and troubleshoot integration errors.

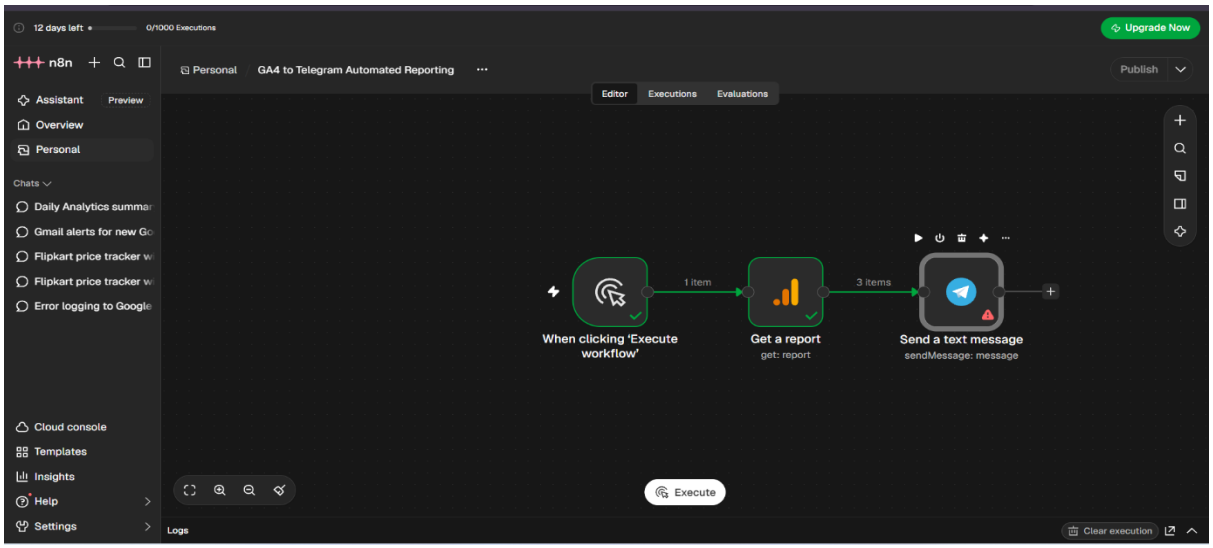

This automation reduces the need to manually check website analytics and makes reporting more convenient.
