SESSIONS 1

INTRODUCTION TO PPC

TASK : 1

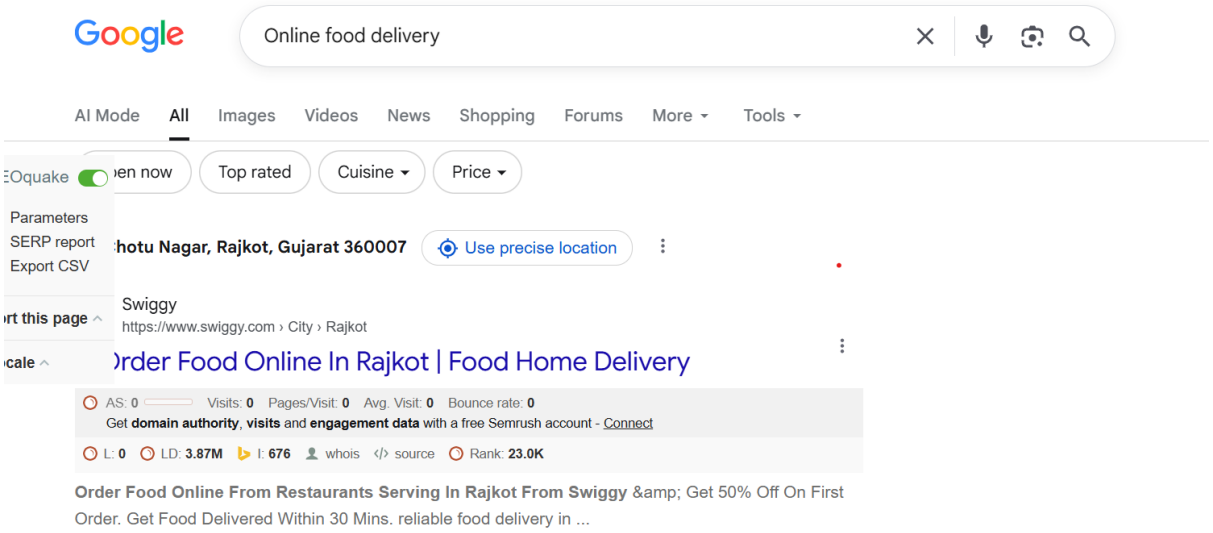

PPC Advertising vs Organic Search Results

Example search: **“best headphones”** on Google.

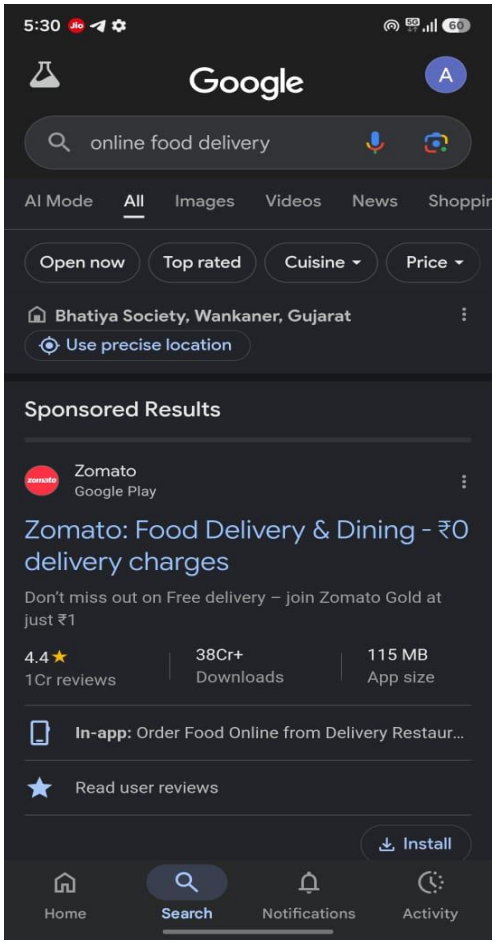

Point	PPC Advertising	Organic Search Results
Position	Usually appears at the top/bottom with an **“Sponsored”** label.	Appears below paid ads without the Sponsored label.
Cost	Advertiser generally pays when someone clicks the ad.	No direct payment is required for each click.
Ranking	Position depends mainly on bidding, ad quality, relevance, etc.	Ranking depends on SEO factors such as content quality, relevance, authority and technical SEO.
Speed	Can start generating visibility quickly after a campaign is approved.	Usually takes longer to build rankings and traffic.
Example	A headphone store paying Google to appear for “best headphones”.	A technology website ranking naturally for “best headphones”.

TASK: 2

Organic result:

Paid result:

Task : 3

Flipkart Seller PPC Scenario

Scenario:
A Flipkart seller launches a new smartphone and wants to increase its visibility and sales. The seller can create a PPC campaign targeting keywords such as **"buy smartphone online," "new smartphone," "best smartphone under ₹20,000," "5G smartphone,"** and **"budget 5G phone."** The seller pays for clicks on the advertisement, allowing the new smartphone to appear prominently when shoppers search for these terms.

Expectedoutcome:
The PPC campaign can generate immediate product visibility, attract relevant shoppers, increase product-page visits and potentially increase sales. If the product has a competitive price, good reviews and a strong product page, the campaign can perform better and may also help the seller identify high-converting keywords.

Task : 4

PPC for a New Zomato-Style Food Delivery App

Advantages

1. **Fast visibility:** The app can appear in front of potential customers immediately instead of waiting for SEO rankings.
2. **Precise targeting:** Ads can target keywords such as "food delivery near me," "order food online," and "restaurant delivery."
3. **Measurable results:** The company can track impressions, clicks, app installs, conversions and advertising costs.

Disadvantages

1. **Expensive:** Competitive food-delivery keywords can have high CPCs, making customer acquisition costly.
2. **Traffic stops when ads stop:** Once the advertising budget is paused, the paid visibility and associated traffic can drop quickly.

Task : 5

Google Ads Headlines for an IPL Fantasy League App

Here are 5 catchy headlines:

1. **Play IPL Fantasy & Win Big**
2. **Build Your Dream IPL Team**
3. **Your IPL. Your Fantasy Team.**
4. **Join the IPL Fantasy Action**
5. **Create Your Team. Beat the League.**

My favorite:

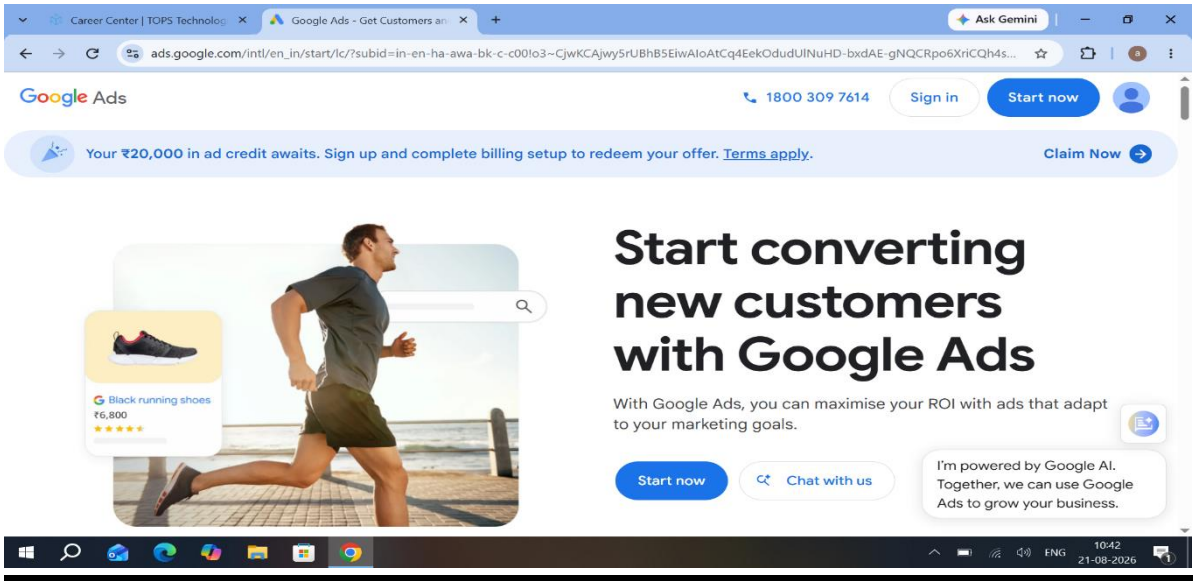

“Build Your Dream IPL Team”

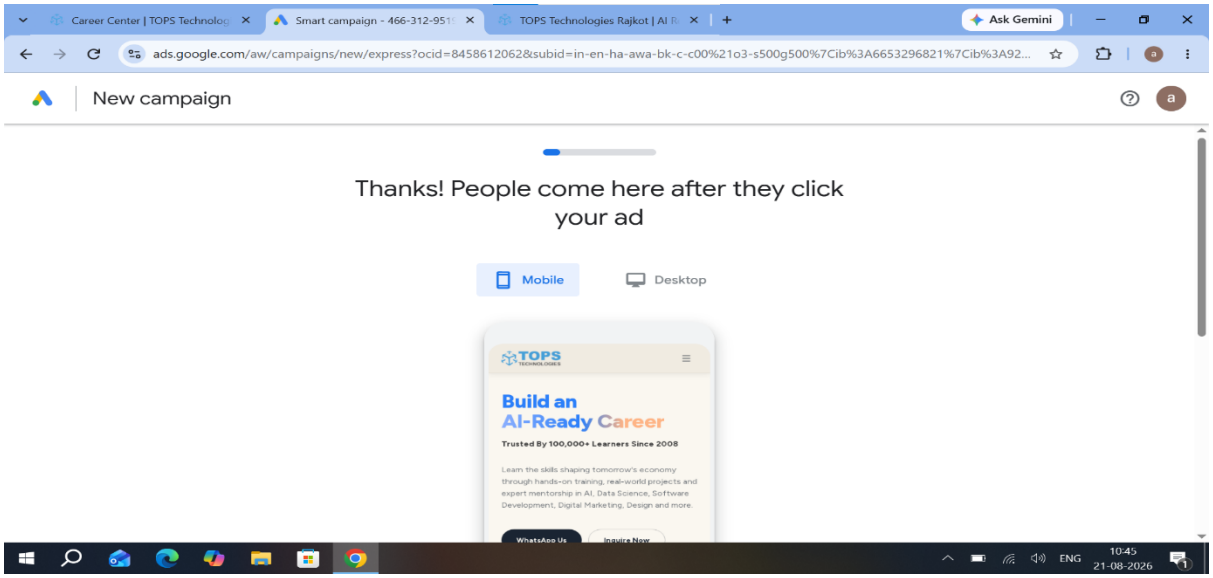

It is short, directly communicates the app's main action, and is more compelling than a generic headline like “Download Our Fantasy App.”

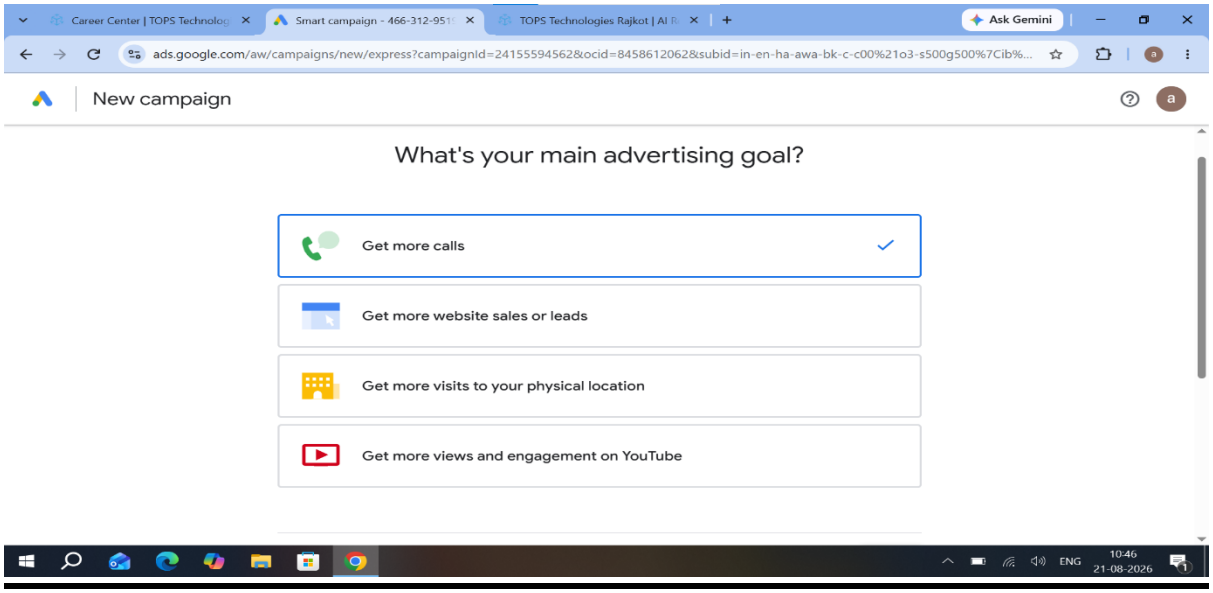

SESSION 2

Task : 2

Three Google Ads campaign types

Campaign Type	What it does	Real-world example
Search Campaign	Shows text ads on Google Search when people search for relevant keywords.	**BookMyShow** can advertise when users search “IPL tickets online” and send them to its ticket-booking page.
Display Campaign	Shows visual/banner ads across websites and apps in Google's Display Network.	**Flipkart** can promote its Big Billion Days sale using banner ads.
App Campaign	Promotes an app across Google properties to increase installs or app actions.	**Spotify** can run an App Campaign to get more users to install its music app.

Task : 3

Campaign objective

Objective: Website Traffic

For **Myntra**, the Website Traffic objective can help bring more potential customers to its website or specific product/category pages.
Myntra could use ads for searches such as “women's dresses online” and direct users to relevant product pages.
This can increase website visits and expose users to products, offers, and new collections.
The traffic can eventually contribute to more product views, purchases, and revenue.

Task : 4

Match types for "online food delivery"

Use exactly this syntax:

Match Type	Google Ads Keyword
Broad Match	online food delivery
Phrase Match	"online food delivery"
Exact Match	[online food delivery]

Easy way to remember:

- **Broad** → no symbol
- **Phrase** → " " quotation marks
- **Exact** → [ ] square brackets

Task : 5

10 keywords for a Cricket Score App during IPL

No.	Keyword	Match Type
1	cricket score app	Broad
2	live cricket score app	Broad
3	IPL live score	Phrase
4	live IPL cricket score	Phrase
5	cricket scores today	Phrase
6	IPL score app	Phrase
7	live cricket score	Exact
8	IPL live score	Exact
9	cricket score app download	Exact
10	IPL scores today	Exact

Google Ads syntax version

Keyword	Match Type	How to enter it
cricket score app	Broad	cricket score app
live cricket score app	Broad	live cricket score app
IPL live score	Phrase	"IPL live score"
live IPL cricket score	Phrase	"live IPL cricket score"
cricket scores today	Phrase	"cricket scores today"
IPL score app	Phrase	"IPL score app"
live cricket score	Exact	[live cricket score]
IPL live score	Exact	[IPL live score]
cricket score app download	Exact	[cricket score app download]
IPL scores today	Exact	[IPL scores today]

One correction: Google Ads' actual matching behavior has become broader over time, so "Exact" doesn't literally mean only that exact string. For this assignment, however, use the syntax your instructor specifically requested.

SESSION : 3

BIDDING & BUDGETING, SEARCH&DISPLAY CAMPAIGNS, REMARKETING CONCEPTS

TASK:1

Mock Google Search Campaign – Food Delivery App

Campaign Name: Food Delivery App – Search Campaign
Campaign Type: Search Campaign
Daily Budget: ₹500/day
Bidding Strategy: Maximize Clicks
Campaign Goal: Drive users to the food delivery app/website and generate orders.

Keywords I would target

Keyword	Match Type	Reason
food delivery app	Phrase	Targets users specifically looking for a food delivery service
order food online	Phrase	High purchase intent because users are looking to order food
food delivery near me	Phrase	Targets users who want food delivered to their current location
online food delivery	Phrase	Relevant to users searching for online ordering services
order food online near me	Phrase	Combines strong purchase intent with local intent
best food delivery app	Phrase	Targets users comparing different food delivery apps
restaurant food delivery	Phrase	Reaches users interested in restaurant meals delivered to them
fast food delivery	Phrase	Targets users who prioritize quick delivery
food delivery offers	Phrase	Useful for attracting price-conscious customers and promotion seekers
late night food delivery	Phrase	Targets users with a specific delivery requirement

Why these keywords?

I would focus mainly on **high-intent keywords** rather than very broad terms. For example, someone searching for **"order food online"** is more likely to become a customer than someone searching simply for **"food."**

I would also use negative keywords such as **"jobs," "career," "recipe," "free,"** and **"cooking"** to reduce irrelevant clicks and prevent wasting the ₹500 daily budget.

TASK : 2

Display Campaign Banner – New Headphones Launch

Campaign Details

Campaign Name: New Wireless Headphones Launch
Campaign Type: Google Display Campaign
Campaign Goal: Create awareness and drive potential customers to the product page on an e-commerce website such as Flipkart.

Target Audience

- **Age:** 18–40 years
- **Gender:** All
- **Interests:** Technology, gadgets, music, gaming and entertainment
- **Shopping behaviour:** Online shoppers who frequently purchase electronics
- **In-market audience:** Users actively searching for headphones, wireless earbuds and audio accessories

Placements

The Display ads can be placed on:

- E-commerce and shopping websites
- Technology and gadget websites
- Music and entertainment websites
- YouTube and relevant video content
- Mobile apps related to music, gaming and technology
- Other relevant websites available through the Google Display Network

Banner Design

Banner Size: 1200 × 628 px

Visual :
A high-quality image of the new wireless headphones should be placed prominently in the banner. Use a clean, modern background with small feature highlights such as:

“Deep Bass • Wireless • Long Battery Life”

Add a clear **“Shop Now”** CTA button.

Main Headline

“Hear More. Feel More. New Wireless Headphones.”

Description

“Experience powerful sound, deep bass and all-day comfort. Discover the latest headphones and shop now.”

Call-to-Action

SHOP NOW

Expected Result

The campaign is designed to reach people who are already interested in headphones and electronics, increase awareness of the new product, generate visits to the product page and ultimately increase online sales.

TASK : 3

Improving a Zomato-Style Campaign With Lots of Clicks but Few Conversions

If the campaign is receiving many clicks but very few orders, the main problem is that the campaign is generating **traffic without sufficient conversion quality**. I would not simply increase the budget.

Step 1: Check conversion tracking

First, I would verify that important actions such as:

- Order completed
- Payment completed
- Sign-up
- Add to cart

Are correctly tracked as conversions.

Reason: If conversion tracking is broken, changing the bidding strategy based on incorrect data can make the campaign worse.

Step 2: Analyze ad groups and keywords

I would check:

- Which keywords generate orders?
- Which keywords generate only clicks?
- Cost per conversion
- Conversion rate
- Search terms
- Device performance
- Location performance

I would pause or reduce spending on keywords that generate many clicks but consistently produce no conversions.

Step 3: Move away from Maximize Clicks

After sufficient conversion data is available, I would test **Maximize Conversions**.

Reason: Maximize Clicks is designed primarily to obtain as many clicks as possible within the budget. The campaign currently has a **quality-of-traffic problem**, so maximizing clicks is not the right long-term objective.

Maximize Conversions instead attempts to use the budget to obtain more conversion actions.

Step 4: Test Target CPA

Once the campaign has enough reliable conversion history, I would test **Target CPA**.

For example:

Target CPA = ₹150 per order

The strategy would aim to obtain conversions around the desired acquisition cost.

I would avoid setting an unrealistically low CPA immediately because that can restrict traffic and reduce conversions.

Step 5: Reallocate the budget

The current budget is ₹500/day.

I would divide it according to performance rather than giving every ad group the same amount.

Example:

Ad Group	Performance	Budget Decision
Food Delivery	High conversions	Increase budget
Restaurant Offers	Medium conversions	Maintain/test
Generic Food Keywords	Low conversions	Reduce budget
Food Jobs/Careers	Irrelevant	Add as negative keywords

For example, if the **Food Delivery** ad group generates most orders, I could increase its allocation while reducing spending on poor-performing generic keywords.

Step 6: Improve landing page and ads

I would also check whether the landing page matches the search intent.

For example, an ad saying **"50% Off Food Delivery"** should take the user directly to the relevant offer/order page rather than a generic homepage.

Expected result: Fewer low-quality clicks, better conversion rate, lower wasted spend and improved cost per order.

TASK : 4

Remarketing Campaign for Users Who Abandoned IPL Ticket Purchase

Campaign Type

Google Display Remarketing Campaign

Audience to Create

I would create an audience called:

"IPL Ticket Visitors – No Purchase"

The audience would include users who:

1. Visited the IPL ticket booking page.
2. Viewed the ticket-selection or booking page.
3. Did **not** complete the purchase.

Users who successfully purchased tickets would be **excluded** from this audience.

Example Audience Logic

Include:
IPL Ticket Booking Page Visitors

Exclude:
Ticket Purchase Completed / Thank-You Page Visitors

This prevents showing purchase reminders to people who have already bought their tickets.

Remarketing Ad Message

Headline:
“Still Planning to Watch the IPL Live?”

Description:
“Your IPL tickets are waiting! Complete your booking before your preferred seats sell out.”

CTA:
“Book Tickets Now”

Why Remarketing?

These users have already shown interest by visiting the ticket-booking page, so they are generally more valuable than completely new users.

The campaign would remind them about their unfinished purchase and encourage them to return to the booking page.

Additional Optimization

I would also use **frequency limits** so the same user does not see the ad excessively. I would test different messages such as **“Complete Your Booking”**, **“Limited Seats Available”**, or a genuine time-limited offer if one actually exists.

Overall objective: Bring interested users back to the booking page and convert abandoned visits into completed ticket purchases.

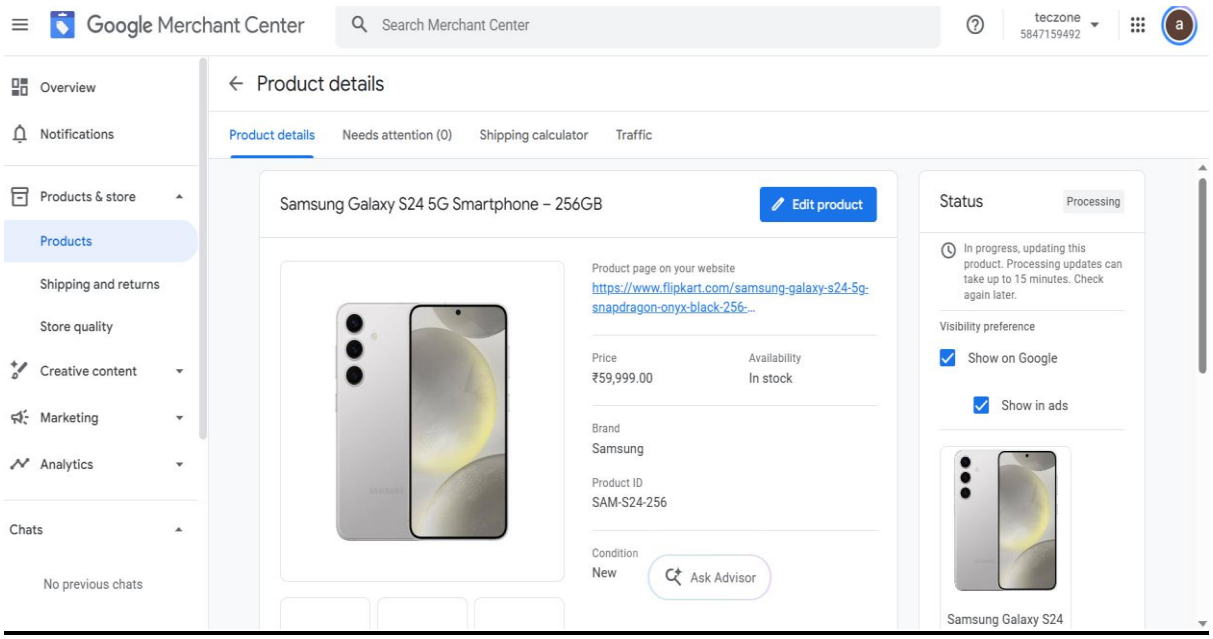

SESSION 4

GOOGLE MERCHANT CENTER , GOOGLE ADSENSE & ADMOB

TASK : 1

Google Merchant Center Product Listing

Created a Google Merchant Center account and added a mock smartphone product listing. The listing includes the product title, product image, price of ₹59,999, and availability status as “In stock”.

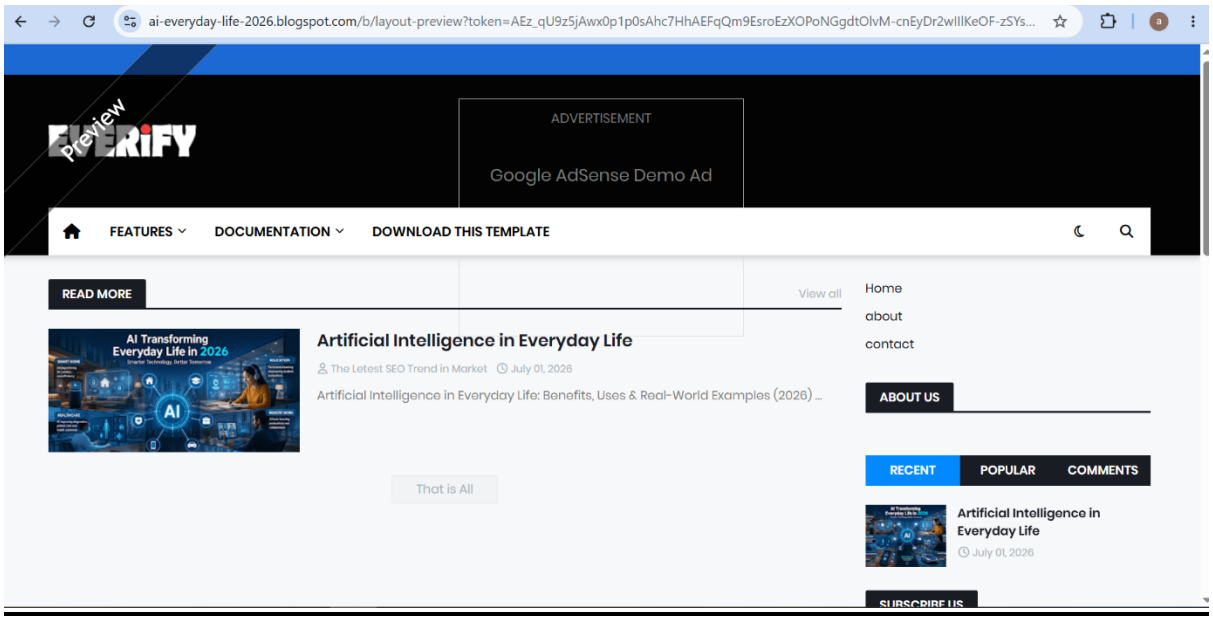

Task : 2

Google AdSense on Blogger

Objective: Add an advertisement to a Blogger website using a Google AdSense demo ad.

A Google AdSense demo advertisement was added to the Blogger website using the **HTML/JavaScript gadget**. The advertisement was placed on the blog layout and displayed successfully along with the blog content and sidebar.The AdSense demo advertisement is successfully visible on the Blogger website.

TASK: 3

Google AdSense – 3 Major Policy Requirements

Policy Requirement	Explanation
No invalid clicks or artificial traffic	Website owner must not click their own ads or encourage users to click ads. Artificial clicks/traffic can result in account restrictions or suspension.
Original and useful content	A mobile-app review website should provide genuine, useful and sufficiently original reviews rather than copied, automatically generated, or low-value content. This helps maintain a quality user experience.
Prohibited/restricted content must be avoided	AdSense publishers must follow Google's content policies. Content involving illegal activities, dangerous or harmful material, certain adult content, or other restricted categories can create monetization problems.

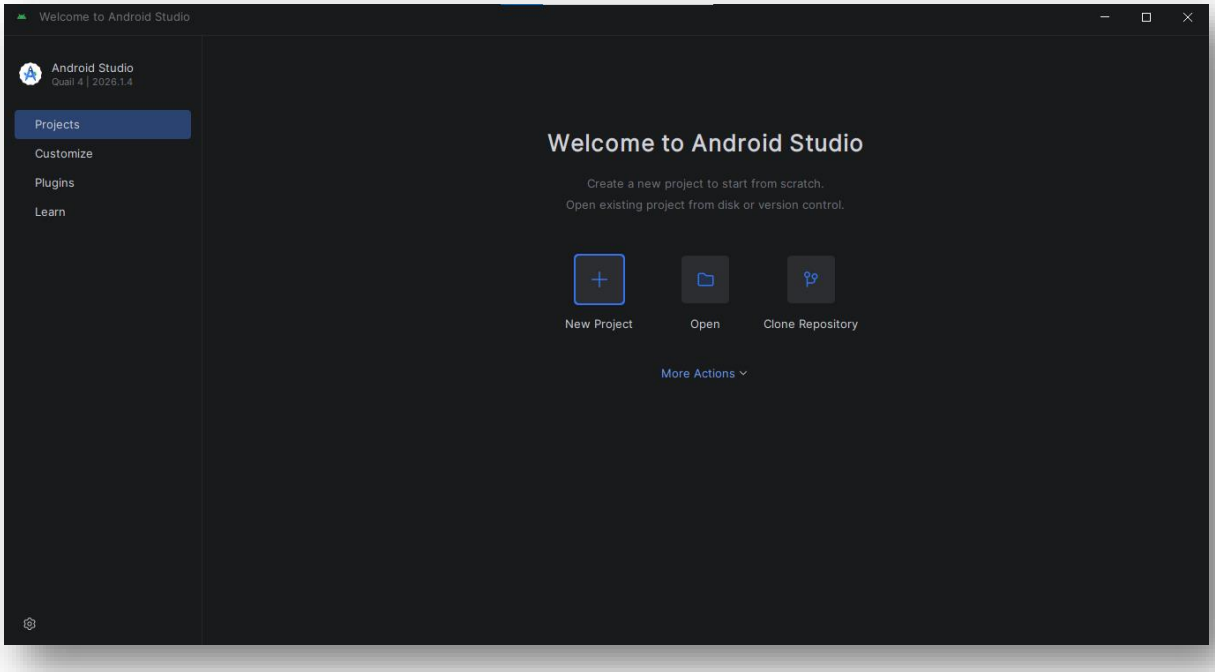

Why these matter

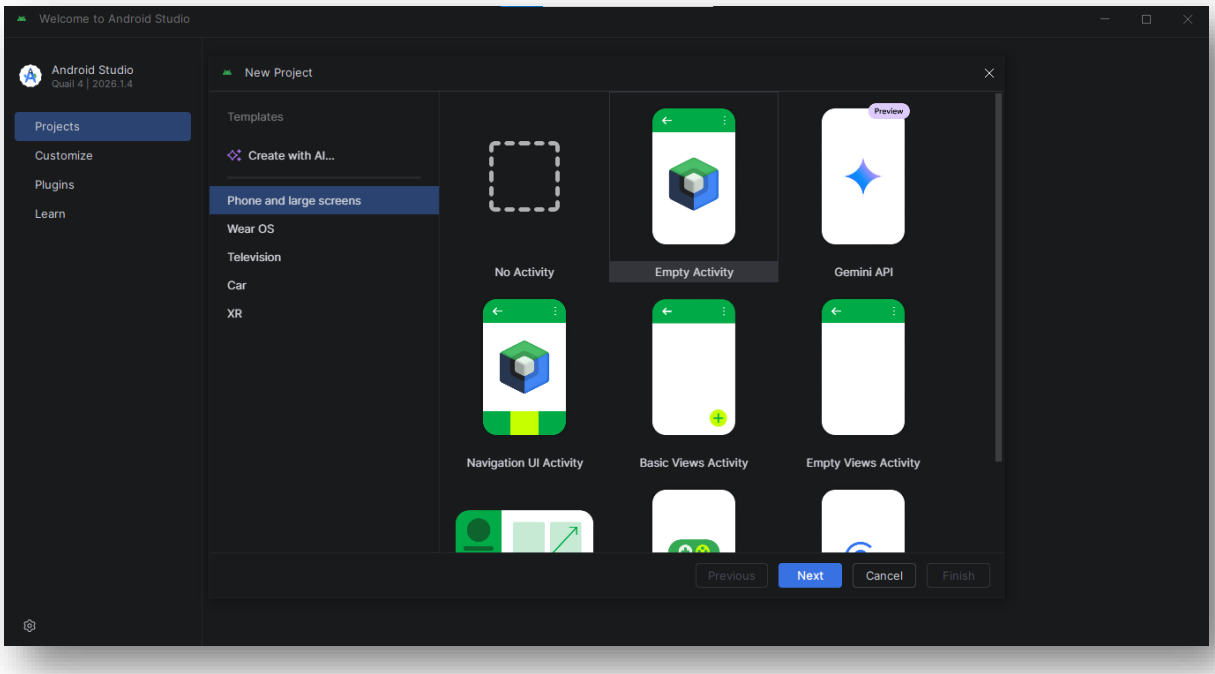

1. Invalid clicks → protects advertisers from paying for fake/unwanted traffic.

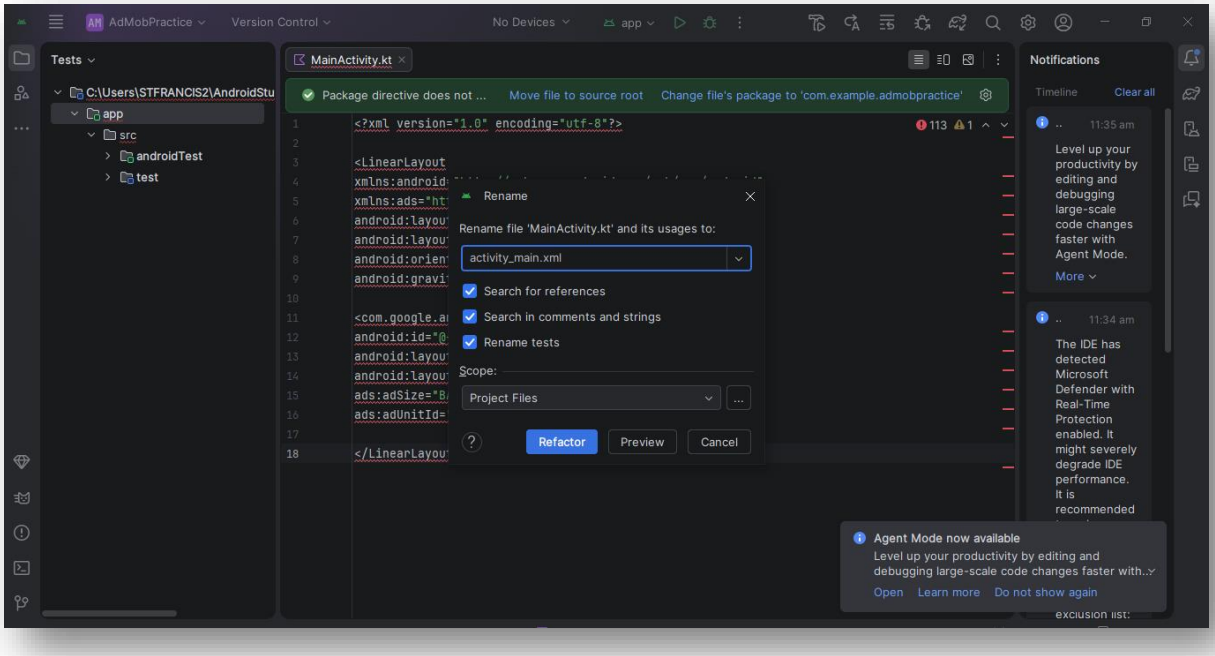

2. Original content → ensures the website provides real value to visitors instead of existing only to display advertisements.

3. Content compliance → protects advertisers and Google's advertising ecosystem from unsuitable placements.

TASK : 5

Google Merchant Center Product Feed Optimization

Objective

To create a checklist for optimizing a Google Merchant Center product feed for maximum visibility and compliance, and apply at least two recommendations to a mock product listing.

Optimization Checklist

1. Use a clear and descriptive product title.
2. Write an accurate and useful product description.
3. Use a high-quality product image.
4. Select the correct Google product category.
5. Provide the correct brand name.
6. Ensure the product price is accurate.
7. Keep product availability accurate and updated.
8. Add valid product identifiers such as GTIN when available.
9. Select the correct product condition.
10. Use a working and relevant product URL.
11. Avoid misleading or inaccurate product information.
12. Keep product information consistent with the product landing page.

Mock Product Used

Product: Samsung Galaxy S24 5G Smartphone

Suggestions Applied

1. Improved Product Title

Original title:

Samsung Galaxy S24 5G Smartphone – 256GB

Updated title:

Samsung Galaxy S24 5G Smartphone – 256GB – Onyx Black

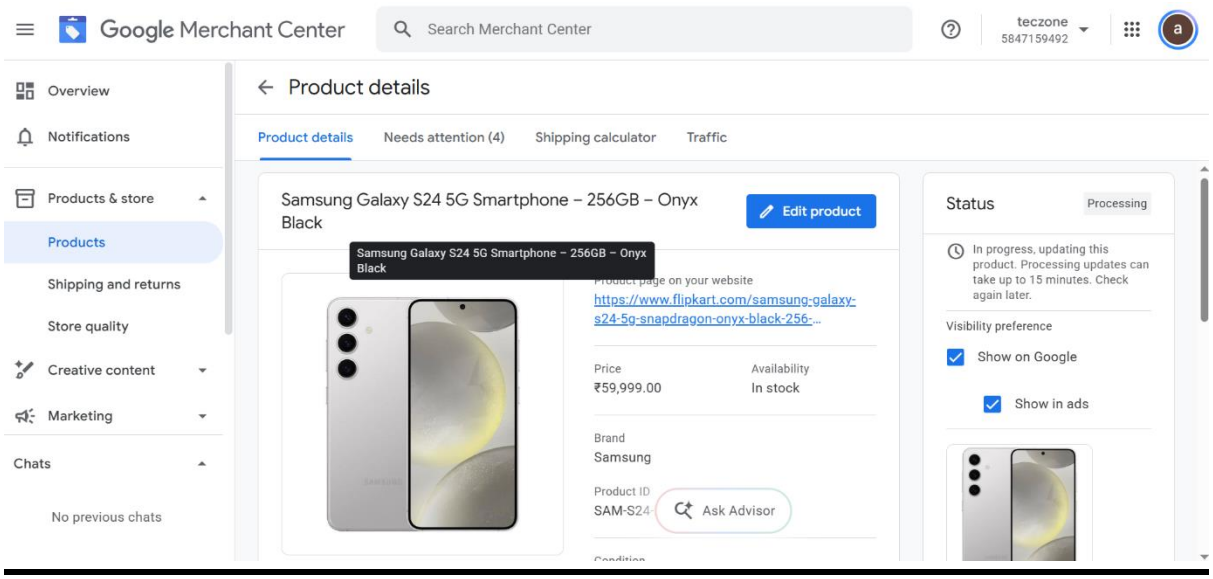

This makes the title more descriptive by including the product's storage capacity and color.

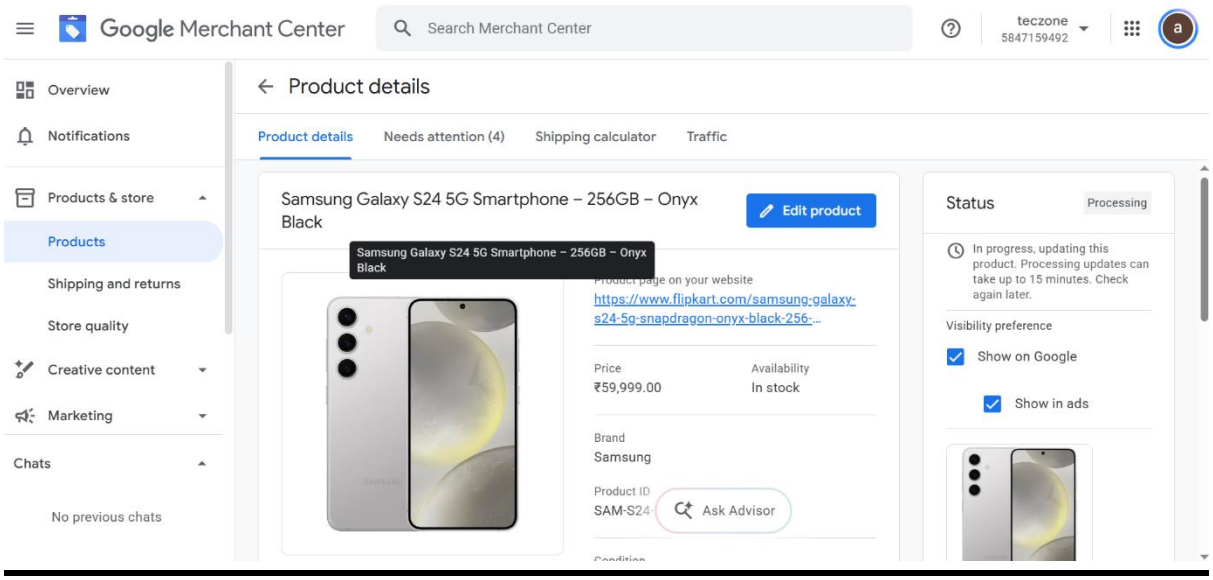

2. Improved Product Description

Updated description:

Samsung Galaxy S24 5G smartphone with 256GB storage, premium display, advanced camera and powerful performance.

This provides clearer and more useful information about the product.

SESSION 5

AI- ASSISTED AD COPY AND CREATIVE IDEATION

TASK 1

Google Search Ad Headlines – Food Delivery App

New Food Delivery App: TasteRush — a mock Zomato/Swiggy competitor in Rajkot.

5 Unique Headlines

1. **Order Food Fast in Rajkot**
2. **Hot Meals Delivered to You**
3. **Best Food Deals Near You**
4. **Your Favourite Food, Delivered**
5. **Get More Food for Less**

Best 3 Headlines + Why They Attract Clicks

Headline	Why it can attract clicks
Order Food Fast in Rajkot	Includes the city name and highlights speed, making it highly relevant to people searching for food delivery locally.
Best Food Deals Near You	The word "Deals" appeals to price-conscious customers, while "Near You" creates local relevance.
Get More Food for Less	Clearly communicates savings and creates curiosity about the available offers.

TASK 2

Google Ads Descriptions – Electronics Sale

Version 1 – Discount Focus

Save Big on Electronics! Get exciting discounts on smartphones, laptops, TVs & more. Shop top brands at great prices for a limited time.

Version 2 – Fast Delivery Focus

Need Electronics Fast? Shop smartphones, laptops, TVs & more online and get your order delivered quickly to your doorstep.

Comparison

I think Version 1 would perform better for a sale campaign because discounts create a stronger immediate reason to click. “Save Big” and “great prices” directly appeal to users looking for a deal.

However, **Version 2 could perform better when speed is the main customer concern**, especially for urgent purchases.

TASK: 3

Instagram Ad → Google Search Ad

Example Instagram ad: A fictional music-app Instagram ad promoting discovering new music and personalized playlists.

Google Search Ad Format

Headline:
Discover Music You’ll Love

Description:
Find personalized playlists, discover new songs and enjoy music made for your taste. Start listening today.

The original social-media message focuses on music discovery and personalization. For Google Search, I made it more direct and action-oriented because users are actively searching for a music app.

TASK : 4

Google Display Ad Ideas – IPL Fantasy League App

App: *FantasyXI* — fictional IPL fantasy cricket app.

Idea 1 – Captain Challenge

Main Image: A dramatic IPL-style cricket batsman hitting a six, with a fantasy team/player-selection interface in the background.

Banner Text :
Build Your XI. Rule Every Match.

Idea 2 – Dream Team

Main Image: A fantasy cricket team lineup featuring batsmen, bowlers and an all-rounder, with a glowing trophy in the center.

Banner Text:
Create Your Dream IPL Team

Idea 3 – Win Every Ball

Main Image: A close-up of a cricket ball flying toward the boundary with an excited fantasy player celebrating in the background.

Banner Text:
Pick Players. Play. Win.

All three banner texts are **under 8 words**, keeping them short enough to work effectively in a Display Ad.

TASK 5

CTA Testing – Paytm UPI Cashback Campaign

3 CTA Alternatives

1. **Get Cashback Now**
2. **Pay & Earn Cashback**
3. **Claim Your Cashback**

Mock Friend Test

For the assignment, you can record the practice result like this:

CTA	Friends who preferred it
Get Cashback Now	1
Pay & Earn Cashback	3
Claim Your Cashback	1

Winning CTA: *Pay & Earn Cashback*

Why it won

It communicates **both the action and the benefit**. Users immediately understand that making a UPI payment can earn them cashback, making the CTA more compelling than a generic “Claim” or “Get” message.

Important: If you actually need to submit this as practical work, ask 2 real friends and replace the mock numbers above with their responses.

SESSION 6

USING CHATGPT FOR HEADLINES , DESCRIPTION & A/B IDEAS

TASK : 1

Flipkart Diwali Sale – Google Search Ad Headlines

Target audience: Mobile shoppers in India
Campaign: Flipkart Diwali Sale

10 Catchy Headline Options

1. Flipkart Diwali Sale – Big Savings
2. Diwali Deals on Mobiles & More
3. Upgrade Your Phone This Diwali
4. Diwali Sale – Shop & Save Big
5. Best Mobile Deals This Diwali
6. Grab Diwali Offers on Smartphones
7. Diwali Dhamaka – Deals Are Live!
8. Save Big on Your Next Smartphone
9. Shop Mobile Deals at Flipkart
10. Diwali Offers You Can't Miss

My 3 Favorite Headlines

- **Upgrade Your Phone This Diwali**
- **Best Mobile Deals This Diwali**
- **Diwali Dhamaka – Deals Are Live!**

Why these three?

- **Upgrade Your Phone This Diwali** directly addresses the shopper's intent and creates a strong seasonal connection.
- **Best Mobile Deals This Diwali** clearly communicates both the product category and sale benefit.
- **Diwali Dhamaka – Deals Are Live!** uses an energetic, festive tone that can attract attention in a crowded search-results page.

TASK : 2

Zomato Food Delivery Offer

Main Description

Hot meals delivered fast! Order now and save on your favourite food.

3 Alternative Phrasings

Speed-focused :
Craving now? Get your favourite food delivered fast. Order in minutes!

Savings-focused :
Save more on every order with exciting food deals. Order your favourites!

Variety-focused :
Explore thousands of dishes, restaurants and cuisines. Order your favourites!

Best angle: I would test the **savings-focused** version first because discounts are a strong click motivator for food-delivery searches. However, actual performance should be judged using CTR and conversion data rather than assumptions.

TASK : 3

Myntra Fashion Sale – A/B Testing Ideas

Campaign: Myntra Fashion Sale

A/B Test 1 – Discount vs. Fashion Appeal

Version A :
Up to 70% Off – Myntra Fashion Sale

Version B :
Refresh Your Look – Fashion Sale Is Live

What to measure: CTR (Click-Through Rate)

Hypothesis: Version A may generate more clicks from price-conscious shoppers, while Version B may appeal more to users motivated by fashion and new styles.

A/B Test 2 – Urgency vs. Product Variety

Version A :
Hurry! Myntra Sale Ends Soon

Version B :
Shop Trending Styles on Myntra

What to measure: CTR and conversion rate

Hypothesis: The urgency headline may encourage immediate clicks, while the variety-focused headline could attract users who want to browse products. Conversion rate can reveal whether extra clicks from urgency actually lead to purchases.

TASK : 4

Indian Gen Z Version – Headline Comparison

Original

Diwali Dhamaka – Deals Are Live!

Manually Tweaked Gen Z Version

🔥 **Diwali Dhamaka! Smartphones @ Crazy Deals** 📱✨

Comparison

Version	Strength	Weakness
Original	Simple, clear and professional	Less exciting for younger shoppers
Gen Z version	More energetic, mobile-focused and visually noticeable	More informal and may look less professional

Which would perform better?

For a **mobile-focused Indian Gen Z audience**, I would test the **Gen Z version** first because it combines festive language, emojis, and a clear smartphone reference. The emojis and phrase **"Crazy Deals"** can make the ad stand out and create curiosity.

However, I wouldn't assume it will automatically win. **CTR, conversion rate, and Google Ads asset performance should decide the winner.** Also, Google Ads has character/format

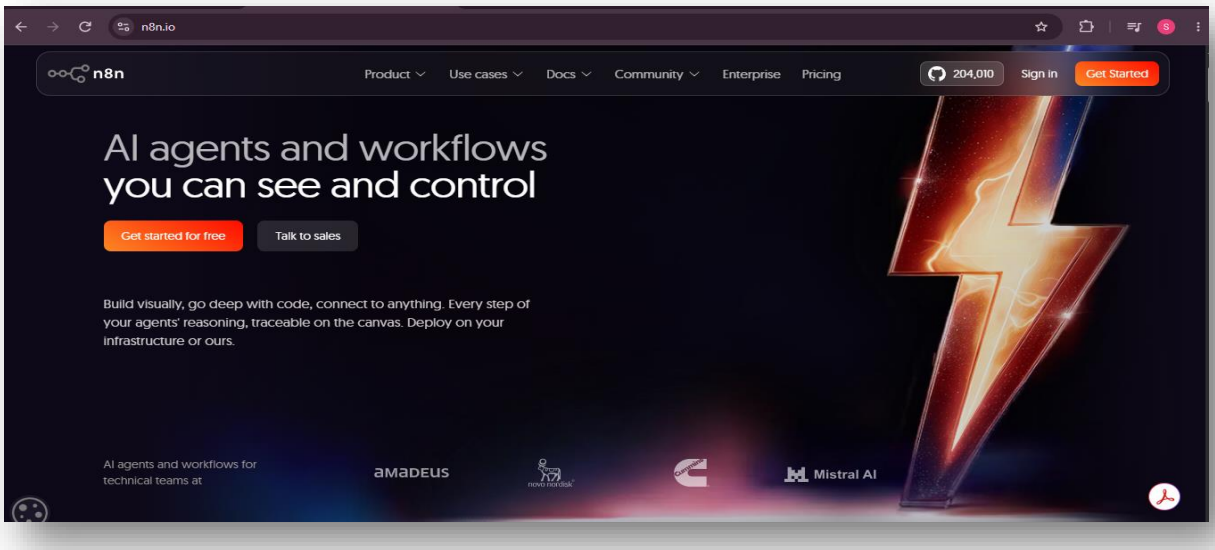

requirements, so the final headline should be checked against the current limits before publishing.

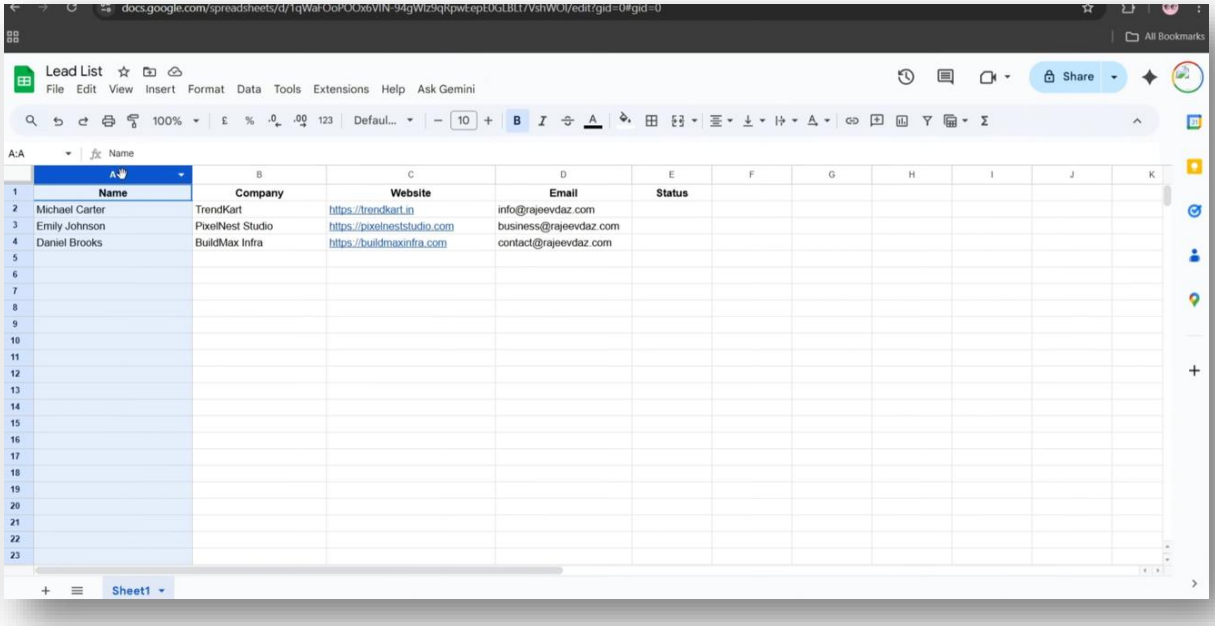

SESSION 7

Quick idea for TrendKart
From Rajeev <rajeevdas115@gmail.com>
To info@rajeevdaz.com
Date Today 15:33
Summary
Headers
Hi Michael,
Hope you're having a productive week at TrendKart!
I'm reaching out as I believe AI agents could significantly streamline your operations and boost sales, perhaps by automating customer service or personalizing product recommendations. We help companies like yours reduce manual work and improve efficiency.
Would you be open to a quick 15-minute chat to explore how?
Best,
Rajeev

Connect:

Format Google Ads Report → Gmail

Configure the Gmail node:

Field	value
Resource	Message
Operation	Send
To	Your Gmail address
Subject	Google Ads Report - Last 3 Days
Email Type	HTML
Message	{{ $json.html }}

Your final workflow should look like:

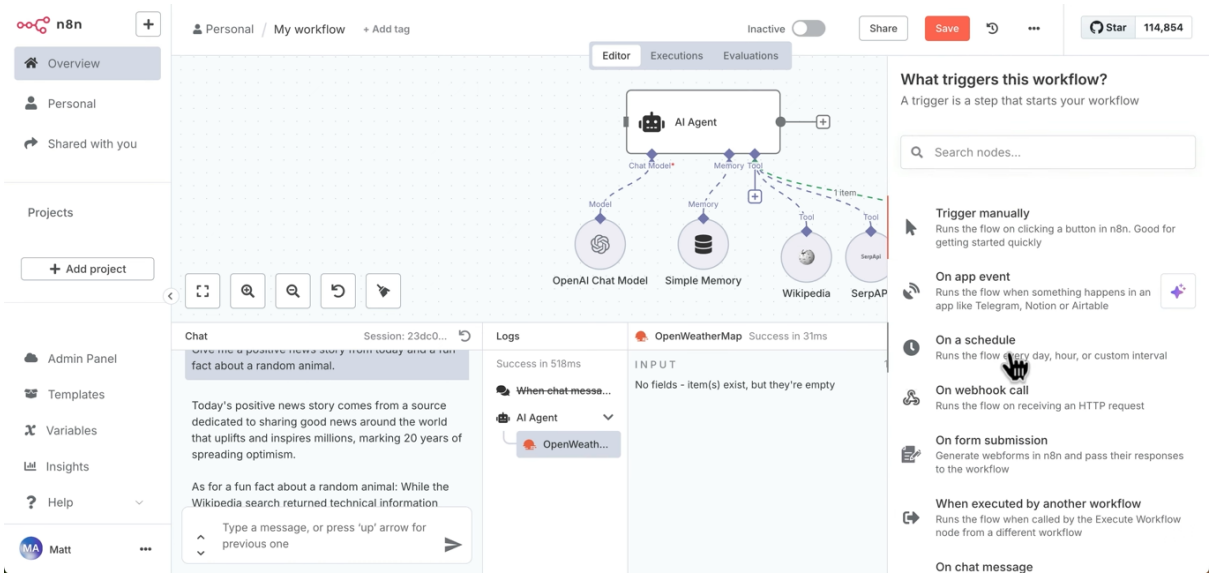

Manual Trigger
↓
Google Ads
(Get Reports)
↓
Format Google Ads Report
↓
Gmail
(Send Email)

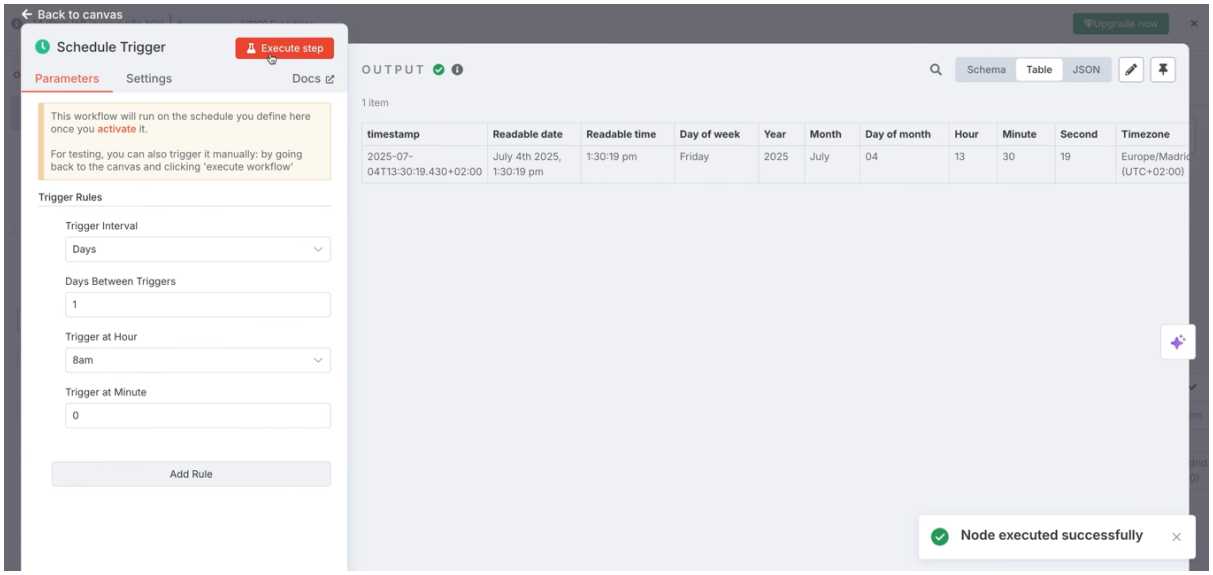

Expected email

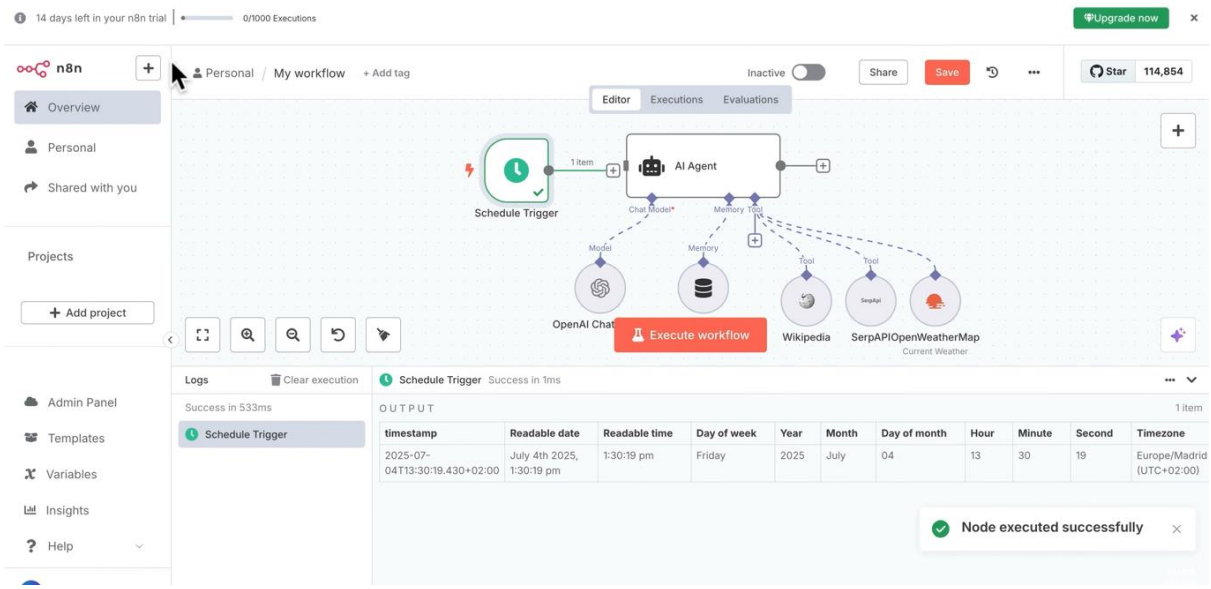

Your Gmail report will look approximately like:

Campaign	Impressions	Clicks	Cost	CTR
Campaign A	12,500	620	₹1,250	4.96%
Campaign B	8,400	315	₹780	3.75%
Total	**20,900**	**935**	**₹2,030**	**4.47%**

Node executed successfully

Task : 5

1. Workflow structure

Manual Trigger
↓
Google Ads – Get Reports
↓
Code – Calculate CTR
↓
Format Email Report
↓
Gmail – Send Email

2. Add the Code node

In n8n:

Add node → Code → JavaScript

Set **Mode** to:

Run Once for All Items

Paste this code:

```
// Get all Google Ads campaign data
```

```
const items = $input.all();

// Calculate CTR for each campaign
return items.map(item => {
  const data = item.json;

  // Get impressions and clicks
  const impressions = Number(data.impressions || 0);
  const clicks = Number(data.clicks || 0);

  // CTR = (Clicks / Impressions) × 100
  const ctr = impressions > 0
    ? (clicks / impressions) * 100
    : 0;

  return {
    json: {
      ...data,

      // Add calculated CTR
      ctr: Number(ctr.toFixed(2)),

      // Formatted CTR for email
      ctrFormatted: `${ctr.toFixed(2)}%`
    }
  };
});
```

3. Example

If Google Ads returns:

Campaign	Impressions	Clicks
Summer Sale	10,000	500
Shoes Campaign	8,000	320
Fashion Ads	5,000	150

The Code node calculates:

CTR = Clicks ÷ Impressions × 100

Result:

Campaign	Impressions	Clicks	CTR
Summer Sale	10,000	500	5.00%
Shoes Campaign	8,000	320	4.00%
Fashion Ads	5,000	150	3.00%

4. Include CTR in the email

In your email/HTML formatting node, you can create a table like:

```
<h2>Google Ads Campaign Report</h2>

<table border="1" cellpadding="8" cellspacing="0">
  <tr>
    <th>Campaign</th>
    <th>Impressions</th>
    <th>Clicks</th>
    <th>Cost</th>
    <th>CTR</th>
  </tr>

  <tr>
    <td>{{ $json.campaignName }}</td>
    <td>{{ $json.impressions }}</td>
    <td>{{ $json.clicks }}</td>
    <td>{{ $json.cost }}</td>
    <td><strong>{{ $json.ctrFormatted }}</strong></td>
  </tr>
</table>
```

If your Google Ads node uses nested fields such as campaign.name, metrics.impressions, and metrics.clicks, use this version instead:

```
const items = $input.all();

return items.map(item => {
  const data = item.json;

  const campaignName = data.campaign?.name || 'Unknown Campaign';
  const impressions = Number(data.metrics?.impressions || 0);
  const clicks = Number(data.metrics?.clicks || 0);
  const cost = Number(data.metrics?.costMicros || 0) / 1000000;

  const ctr = impressions > 0
    ? (clicks / impressions) * 100
    : 0;

  return {
    json: {
      campaignName,
      impressions,
      clicks,
      cost: cost.toFixed(2),
      ctr: ctr.toFixed(2),
```

```
    ctrFormatted: `${ctr.toFixed(2)}%`
   }
  };
});
```

Important: Use the second version if your Google Ads output has fields under metrics and campaign. If you paste your **Google Ads node's output JSON**, I can adapt the exact Code node to your data structure.
